## PREFACE

The year 1967 is Canada's Centenary of Confederation and throughout these one hundred years the story of the country's progress—economic, social and legislative—has been recorded in the Canada Year Book. This publication, from small beginnings in 1867 when statistical and other official information was meagre, has developed to its present form and now encompasses, sometimes in brief and sometimes in detail, the great mass of statistical information that has become available through the Dominion Bureau of Statistics, supplemented by social and legislative data from other Departments of Government and from the provinces. Year by year, the Canada Year Book endeavours to fulfil the formidable task of keeping pace with the rapidly changing economic life of the country. Thus, the whole series of Year Books constitutes an official record of a century of Canada's progress.

The 1967 edition is not a "historical" edition because of the great amount of current data that must be presented, but follows the established policy of including in each chapter the latest information procurable at the time of printing, the emphasis changing with progress and developments in the field covered, and adding new data when available. In this edition, specially prepared articles or chapter material are included on "Growth of Geographical Knowledge of Canada" (pp. 1-6), "Geology and Economic Minerals of Canada" (pp. 19-32), "The Climate of the Canadian Arctic" (pp. 55-74), "Federal Assistance in Livestock Improvement" (pp. 453-457), "Manufacturing and the Changing Industrial Structure of the Canadian Economy, 1946-65" (pp. 665-678), "History of the Labour Movement in Canada" (pp. 773-781), "An Outline of the Development of Civil Air Transport in Canada" (pp. 838-843), "The Development of Telecommunications in Canada" (pp. 862-869) and "Canada's Participation in the Changing Pattern of World Trade, 1953-66" (pp. 953-966). A 140-mile-to-the-inch political map of Canada is inserted in a back-cover pocket.

The volume was produced in the Canada Year Book Division by Miss Margaret Pink, Associate Editor, and the Year Book staff under the editorship and direction of Dr. C. C. Lingard, Director of the Division. The charts and maps, except where otherwise indicated, were prepared by or under the direction of L. Tessier of the Drafting Unit. The frontispiece is a photograph by Malak from the National Film Board of Canada Centennial publication *Stones of History—Canada's Houses of Parliament*. Credits for the other photographic illustrations used throughout the publication are listed on p. iv.

The co-operation of numerous officials of the various Departments of the Federal and Provincial Governments and of this Bureau in the preparation of material for the Year Book is gratefully acknowledged. Credit by means of footnotes is given where possible, either to the persons or to the public service concerned.

*Walter E. Duffett.*

## WEIGHTS AND MEASURES AND OTHER INTERPRETATIVE DATA

In Canada as a rule the Imperial system of weights and measures is followed; an exception is the ton where, unless otherwise stated, the short ton of 2,000 lb. is meant.

### Relative Weights and Measures, Imperial and United States

The following list of coefficients may be used to translate amounts expressed in one unit to the other. Where reference is made to Imperial pint, quart and gallon, their equivalent in ounces is also in Imperial measure; likewise United States designations for these quantities are shown in the U.S. equivalent in ounces. The Imperial (or British) fluid ounce and the U.S. fluid ounce are different measures. One Imperial fluid ounce equals 0.96 U.S. fluid ounce and one Imperial gallon equals 1.2 U.S. gallons.

Imperial pint=20 fluid ounces	1 short ton=2,000 pounds
U.S. pint=16 fluid ounces	1 long ton=2,240 pounds
1 Imperial quart=40 fluid ounces	1 barrel crude petroleum=35 Imperial gallons
1 U.S. quart=32 fluid ounces	1 ounce avoirdupois=0.91146 ounce troy (oz.t.)
1 Imperial gallon=160 fluid ounces	1 statute mile=5,280 feet
1 U.S. gallon=128 fluid ounces	1 nautical mile=6,080 feet
1 Imperial proof gallon=1.36 U.S. proof gallon	

The following weights and measures are used in connection with the principal field crops and fruit; 2.3 bu. of wheat are required to produce 100 lb. of flour.

	<i>Pounds per Bushel</i>		<i>Pounds per Bushel</i>
<b>Grains—</b>		<b>Fruits (standard conversions)—</b>	
Wheat.....	60	Apples.....	45
Oats.....	34	Pears, plums, cherries, peaches, grapes and apricots.....	50
Barley and buckwheat.....	48	Strawberries and raspberries (per qt.)	1.25
Rye, flaxseed and corn.....	56		
Rapeseed and mixed grains.....	50		
All others.....	60		

### Fiscal Years of Federal and Provincial Governments

The fiscal year of the Federal Government and of each of the ten Provincial Governments ends on March 31. Throughout the Year Book, all figures are for calendar years except where otherwise indicated in text or table headings.

### Miscellaneous

Maritime Provinces=Prince Edward Island, Nova Scotia and New Brunswick  
 Atlantic Provinces=Newfoundland, Prince Edward Island, Nova Scotia and New Brunswick  
 Central Canada=Quebec and Ontario  
 Prairie Provinces=Manitoba, Saskatchewan and Alberta  
 Btu.=British thermal unit (coal)  
 Mcf.=thousand cubic feet (gas)  
 n.e.s.=not elsewhere specified  
 n.o.p.=not otherwise provided for  
 psi. (atomic research)=pounds-force per square inch (pressure)  
 D.B.H. (forestry)=diameter at breast height.

## *SYMBOLS*

The interpretation of the symbols used in the tables throughout this publication is as follows:—

- . . figures not available.
- ... figures not appropriate or not applicable.
- nil or zero.
- amount too small to be expressed or where "a trace" is meant.
- » preliminary figures.
- ⌘ revised figures.

The vastness of Canada's territory posed a tremendous task for the early surveyors. Following a system devised in 1871, consisting of townships six miles square, each containing 36 sections of 640 acres, the Dominion Land Surveyors began to lay out the huge prairie chequerboard, using the 49th parallel as the southern boundary and ranging east and west of the prime meridian established that year in the vicinity of Emerson, Manitoba. About one third of the distance between the 49th and 60th parallels across the whole width of the prairies was completed by 1910 and with only minor adjustments these early survey lines remain today. From above the great Regina plain, the section lines bounding the east and west sides of the townships can be seen to run straight through to the horizon.

## PART I.—GEOGRAPHY AND GEOLOGY

### GROWTH OF GEOGRAPHICAL KNOWLEDGE OF CANADA\*

In area, Canada is among the world's leading countries for, although less than half the size of the Soviet Union, it is larger than China, the United States (including Alaska and Hawaii) or Brazil. Yet its population of about 20,000,000 is relatively small. It may be wondered how thoroughly this enormous land has been mapped—to what extent its physical features have been located and described and how much of its territory is in fact known and at the disposal of its inhabitants. A preliminary answer to these questions may come from tracing the growth in knowledge of Canada's geography during the hundred years since 1867. Although today it is possible to speak of a nation extending "from sea to sea and pole to borderland", this was far from being so at its founding. The Canada created by the British North America Act in 1867 was limited to the St. Lawrence Valley, to the northern margins of the Great Lakes (its exact extent into the hinterland being undefined) and to New Brunswick and Nova Scotia. The new Canada had an area of 384,598 sq. miles and a population of about 3,300,000. In essence, it was a nation built around the Gulf of St. Lawrence and penetrating inland only as far as its headwaters reached. This neat and essentially maritime concept was very soon breached, and the immense task of creating a new nation on the northern half of the North American Continent began.

\* Prepared by Dr. Trevor Lloyd, McGill University, Montreal.

The first formal addition was Manitoba, a minuscule (14,350 sq. miles), postage-stamp-like province formed around the nucleus of the Red River Settlement. Of greater ultimate significance was the transfer at that time of title to the vast lands of the Hudson's Bay Company, first chartered two centuries before. This brought under Canadian sovereignty the region of Rupert's Land and the North-Western Territory, much of it still *terra incognita*. A year later British Columbia was added, establishing for the first time the 60th parallel of latitude as the northern limit of a province, a line to become eventually a major feature of the map of Canada and to be demarcated on the ground with great precision from the Pacific Ocean to Hudson Bay. The addition of Prince Edward Island in 1873 rounded out the Maritime Provinces—but Newfoundland (including Labrador) was not to join Confederation until 1949. Thus, the familiar outline of provincial and territorial boundaries fell into place relatively quickly and all (except Newfoundland) have now been in existence for more than half a century. Alberta and Saskatchewan date from 1905 and Manitoba, Ontario and Quebec reached their present limits in 1912. What of the surviving portion of the old Northwest Territories lying beyond the 60th parallel? Early uncertainty as to the northward extent of Canada had been ended with cession by Britain in 1880 of the islands lying north of the mainland. To the west of the Mackenzie River basin lay Yukon Territory, of which the boundaries were first drawn in 1895. By 1912 the Northwest Territories had attained its present limits. Except for the change in the status of Newfoundland, the political map of Canada was stabilized within 45 years of Confederation. In this, of course, are considered only lines on maps or definitions in legal documents; conditions on the ground itself were far less clearly known, since there remained large unexplored areas not only in the Far North but well within the limits of the provinces themselves.

In territorial extent, Canada relatively early on became a large but compact country extending from Atlantic to Pacific in the higher latitudes, and also fronting on the Arctic Ocean. Two minor aspects of its external limits should be mentioned. In the west, Yukon Territory and northern British Columbia are excluded from actual contact with the ocean by a southerly extension of Alaska, the so-called "panhandle". The seaward extent of Canadian sovereignty in the Far North has been less than precisely known. Canadian maps have customarily shown lines extending from the easterly and westerly limits of the country along the 60th and 141st lines of longitude as far as the North Pole, with the declared intention of claiming any new lands that may be found within these limits. In view of the advanced state of geographical knowledge in the Arctic today, the lines are probably no longer significant.

Filling in the map of Canada with topographical detail has been a long and exacting task, which remains far from completed. Exploration began (if one excludes the pioneering travels of Indians and Eskimos) about a thousand years ago with the arrival of Vikings from Greenland. Details of their discoveries, and those of others who may have followed them until the fifteenth century, have not survived but the records of later voyages include some of the most illustrious navigators and explorers in history. Canada has been singularly fortunate in its geographical pioneers—the Cabots, Cartier, Frobisher, Davis, Hudson, Baffin, Cook, Thompson, Ross, Franklin, Sverdrup, Amundsen, Stefansson and many others.

A pattern of exploration evolved which was determined by the initial approach from Europe and the configuration of the Atlantic shoreline. The St. Lawrence estuary invited search and this led on to the Great Lakes and the interior of the Continent and then by waterways to the northwest, to the Arctic and to the Pacific. Farther north, the search for a western sea and the route to Asia led by way of Hudson Strait into the Bay, but failure to find an outlet there forced the search still farther north, through Davis Strait and Baffin Bay and then westward, where it was long frustrated by the complex of islands and narrow channels and by the summer ice.

In the south, the old westward route from the St. Lawrence was eventually followed up in the railway era, when the Canadian Pacific skirted the Great Lakes route to the Red River and then struck out across the prairies to the Rocky Mountains where river

valleys eventually led to the coast. Hence, it was in these lower latitudes that major geographical exploration was focused immediately following Confederation. Reconnaissance surveys were carried out by government parties in the 1870s and by 1880 the Geological Survey of Canada (in those days a comprehensive scientific survey) was probing and mapping the region between Edmonton and the coast. Such early maps were a *pot-pourri* assembled from new traverses by field surveyors, information from exploration by Alexander Mackenzie a century earlier and the reports of Indians. It was in those years that such features as the Peace River appeared on the map for the first time with reasonable accuracy, and then was recorded the first systematic description of that river's canyon, now, nearly 80 years later, the site of a large hydro-electric development.

It is to the need for accurate location of railway routes and the subdivision of prairie farm lands that is owed the very rapid reconnaissance mapping of the area between Lake Superior and the mountains. As air travellers today cross the prairies in a few hours, they can discern below one of the most distinctive of man's imprints on the earth's surface, the uniform pattern of squares and of meridians, range-lines and townships placed there by land surveyors in the closing years of the nineteenth century. On the sure foundation of this early work there has followed series after series of topographic and other maps, and the work continues with increasing refinement.

Elsewhere, what might be termed the 'pre-scientific' era of geographical exploration continued longer. Because of early work by government geologists and surveyors (Ogilvie in the Yukon and Mackenzie areas, Low in Ungava and Bell, the Tyrrells and others south and west of Hudson Bay) and by others before them, the major features south of the Arctic Circle were outlined by the early years of the present century. It was already apparent that the need was now for more systematic, comprehensive surveys and for a steadily expanding, government-sponsored scientific study of the whole country.

Farther north, scientific surveys were longer delayed, in the remoter regions until as late as the mid-1940s. Prior to this, notable contributions to exploration of the Arctic islands by non-Canadians were made by Nares of the British Admiralty (1875); Sverdrup of Norway (1898-1902), working among the more easterly of the islands, has left reminders of the range and thoroughness of his work in many Norwegian place names; and Peary and others explored Ellesmere Island in 1906 and 1909. Amundsen by his voyage (1903-06) from Atlantic to Pacific along an arctic route finally completed the Northwest Passage. His arrival in the Western Arctic coincided with the first journey there by Stefansson, who continued active exploration until 1918. It was he who added the last of the major discoveries to the map of Arctic Canada and who initiated the major participation by Canadians in northern exploration. He combined great ability as a traveller with the advantages of scientific training. At about the same time, an able and determined Canadian seafarer, Captain J. E. Bernier, began a long series of exploratory voyages in the Eastern Arctic.

The era of the large polar expeditions to Northern Canada ended with the First World War and from the 1920s on there began less wide-ranging and more systematic studies of topography, geology, biology, magnetism and other disciplines, greatly aided by improved technology, including the use of aircraft and radio. Formal government participation now became more usual, particularly in broad surveys, while the gifted amateur undertook detailed studies of limited areas.

The burst of government activity in the North during the 1920s, although short-lived, carried a small but very able group of field scientists even beyond the mainland. No attempt to map the whole area could be made but the location of a few places was fixed astronomically and the general arrangement of the chief land masses determined more surely. The modest degree of precision can be judged from a statement in 1930 that "the most easterly point of Baffin Island is in approximately longitude 62° W and on or near the Arctic Circle". A few years before the location of Cape Dorchester, one of the main features on the west coast of that island was shifted about 60 miles southward and a large new bay introduced, this by a visiting American expedition. In those days there was scarcely a point on the map of Northern Canada which could not benefit from the attention of such

summer visitors and many lakes, headlands and islands still awaited discovery and naming. On the whole, the geography of Northern Canada remained a patchwork affair, assembled from the results of expeditions, some of them centuries old. By the 1920s, however, it was beginning to be possible to tie the information together with some assurance. Annual government expeditions by sea between 1922 and 1929 seemed a very promising beginning to a plan to explore and map the whole of the North but policies changed and no major advance proved possible for more than a decade.

Faced with the enormous task of providing accurate maps of Canada, the available resources were quite naturally marshalled for use in the South. As late as 1927 the basic geodetic network, the foundation of all really accurate maps and the locating of specific points within the country, was still edging its way through the southern part of the provinces. It would be decades before anything comparable would become possible in the Arctic. However, maps there had to be, even to remote regions, and they were produced using the best data available. In the early 1940s topographic mapping to a scale of eight miles to the inch finally reached the shores of the polar sea. That the information came in large part from early and sometimes single explorers and was often far from accurate, was less important than that the maps existed. Canada had at last been delimited after a fashion. Dotted lines showed uncertain coasts and large blank areas revealed little but the state of topographic ignorance, yet the maps set the stage for the major surveying and mapping campaign that soon followed.

Systematic exploratory surveys in the North were first undertaken by the Federal Government after the First World War. They were, in effect, an extension into higher latitudes of the techniques that had been used on the prairies, in the western Cordillera and on the southern part of the Canadian Shield. The search for minerals was moving northward and maps were needed to assist geologists and prospectors; improved administration of the area was urgent, as was better transportation.

If only for reasons of convenience, the area that benefited first was the Mackenzie Valley. Although not remote, it was described by Charles Camsell in 1921 as an area about which very little was known. In that year surveys were extended northward from Alberta along the waterway and down to the Arctic Coast. This was a combined operation by topographic surveyors, geologists, hydrographers and geodesists. As a consequence, the Valley was linked securely to Southern Canada and a framework laid down so that more detailed exploration and mapping could go ahead. For the first time there were maps of the Mackenzie River itself—along which stern-wheeled steamers had been navigating by faith and the skill of Indian pilots for several decades. How much remained to be done is illustrated by the fact that Great Slave Lake, a water body of nearly 11,000 sq. miles discovered by Samuel Hearne in 1771 and crossed by Mackenzie in 1789, was not shown on maps with even reasonable accuracy until 1924. The major attempt to extend mapping northward by traditional means demonstrated clearly that, without new time- and labour-saving techniques, the task would be all but impossible. The introduction of aircraft and radio eventually transformed this situation.

During the 1930s, surveying and cartographic techniques were being tried out which, when perfected, made it possible to complete the first mapping of Canada within a few years. It was the aerial camera that made this practicable and much of the original experimentation was carried out under the urgent need to map the North. In its early stages, using oblique air photographs which included the horizon, the detail was transferred to paper with the aid of an ingenious perspective grid etched on a glass plate. This method happened to be particularly useful on the relatively level, lake-strewn Canadian Shield. Vertical photographs were also used but they covered a smaller area so that the mapping took longer. In the more rugged western mountains, the camera was also useful but, because aircraft could not then be employed, rounds of photographs were taken from the higher peaks.

During the Second World War more dependable and longer-range aeroplanes became available, along with more elaborate cameras and plotting equipment, and the coverage of Northern Canada went ahead swiftly. At first the trimetrogon system was used, by which a high-flying aeroplane carried three cameras, simultaneously photographing ahead and to

both sides of the flight line. Exact location of ground control points was still needed and here again air transport was invaluable for by this means survey teams could be moved quickly from place to place and the field season was greatly extended because shipping was no longer needed. From 1948 onward, helicopters were also used. As a result of such technological changes, most of Canada (including the Arctic Archipelago) was covered with vertical air photography, suitable for small-scale mapping, by the late 1950s. At the same time, even more rapid survey methods were being introduced utilizing such electronic distance-measuring devices as shoran and tellurimetry.

Perhaps geological surveying realized the most dramatic results from the use of helicopters and related instrumentation. It has been estimated that between 1842 and 1951 the Geological Survey mapped about 1,000,000 sq. miles of the land surface of Canada; during the next seven years about 500,000 sq. miles were mapped, largely attributable to use of helicopters. This advance has been particularly striking in the Arctic islands where access is difficult, the climate is often very severe and local bases for supply are scarce. In place of the traditional means of transport—dog team, canoe and foot—the Geological Survey in 1955 introduced to the area a carefully planned system of helicopter transport to carry personnel, instruments and supplies. Air photographs provided the needed topographic details. This experiment proved to be efficient, safe and economical and set the pattern for all later field operations in the North. The more elaborate and continuing Polar Continental Shelf Project, covering in effect the most northerly Arctic islands and including all aspects of science, depends largely on this means of transport and observation.

Even the most casual comparison of maps published 25 years ago with those now available demonstrates the notable increase of knowledge of the northern part of the country. The Canadian Shield is shown to be a maze of large and small lakes and complicated water courses where once it appeared as a more or less empty plain and a few large bodies of water, with supplementary detail along the explorers' canoe route. The shapes of land masses have changed and islands appear where none were before. Prince Charles Island in

A laden helicopter arriving at a geographers' base camp on the east coast of Baffin Island. The use of the helicopter has made possible much of the recent advance in knowledge of the physical geography of Canada's North, for by this means personnel, instruments and supplies can be transported quite readily to remote or otherwise inaccessible areas.

Foxe Basin was added to the map following its sighting from the air in 1948 in a region thought to be reasonably well known. Borden Island, discovered 50 years ago by Stefansson, was shown by air photographs to be in fact two islands, the second of which was then named after Mackenzie King. Bathurst Island was revealed as a veritable archipelago and the northern coast of Melville Island was changed almost beyond recognition. Topographical detail has now been added to the maps, with careful contouring replacing such notations as that on Baffin Island "mountains believed to rise to 6,000 feet". In place of geological maps based on random sampling at convenient points along the shoreline, detail can now be provided uniformly over the area. Hydrographic surveys have resulted in reasonably complete charts of all the main routes followed by summer supply ships, and observations made from the smooth surface of the frozen sea have provided submarine topography where even ships cannot penetrate. In such ways, the search for knowledge has reached out into the deeper waters of the Arctic basin.

Study of the remoter parts of Northern Canada is now more comprehensive and there has also been a change in emphasis. Until comparatively recently the need was to know elementary facts about the land and the surrounding seas—in essence, their whereabouts and general character. This first approximation to geographical knowledge was finally completed in the 1950s, to be followed by more detailed surveying and mapping on larger scales. This essential task still continues but it has given way in priority to the carefully planned and all-inclusive scientific survey, similar in scope if not in degree to the established government surveys of Southern Canada.

The monumental *Atlas of Canada* published in 1958 demonstrates more clearly than can words the phenomenal increase in geographical knowledge of the country since the mid-nineteenth century. Its 110 selected sheets cover topics ranging from the routes of the early explorers to the nation's external relations, and reveals not only the state of accumulated knowledge but also the increasingly sophisticated means used in gathering it. Although some of the information used was, of course, assembled during the nineteenth century, a comparison between the Atlas and its predecessor published in 1906 reveals how much has been contributed during the present century. Also apparent is the change in the character of geographical knowledge—using the term in the sense of systematic information which may be displayed areally. To the earlier requirement for topographic maps has been added the need for detailed information on geology, vegetation, climate, soils and a wide range of geophysical phenomena. Also, apart from such physical data, there is arising a great demand for information on the whole range of human, including economic, relationships. Details of population distribution can be mapped with great accuracy (even the whereabouts of the Eskimos is known) as can the location of industries, transportation systems, educational and welfare facilities and a wide range of other essentials to everyday life, from garages to television stations. It has become possible to display the manner in which the land surface of the country is being utilized, whether for forests, pastures, cities, reservoirs, parks and so on and, up to a point, where its improper use has been harmful. Pockets of poverty, rural and urban, can be plotted, as can existing and potential natural wealth.

In other words, the compendium of geographical knowledge about Canada has reached a stage where it is becoming possible to consider the country as "known" in the sense that the older parts of Europe have long been known. This has been brought about by deliberate policy, acting through a complex system of government departments, federal and provincial, charged with gathering information of all kinds and supplemented by important contributions from university scientists.

Almost a thousand years after the first tentative touchdown by Vikings along the eastern seaboard and a century after Confederation, national stocktaking is approaching completion. New knowledge will, of course, continue to pour in at an ever-increasing pace but it will be fitted into a geographical framework which is no longer likely to change dramatically.\*

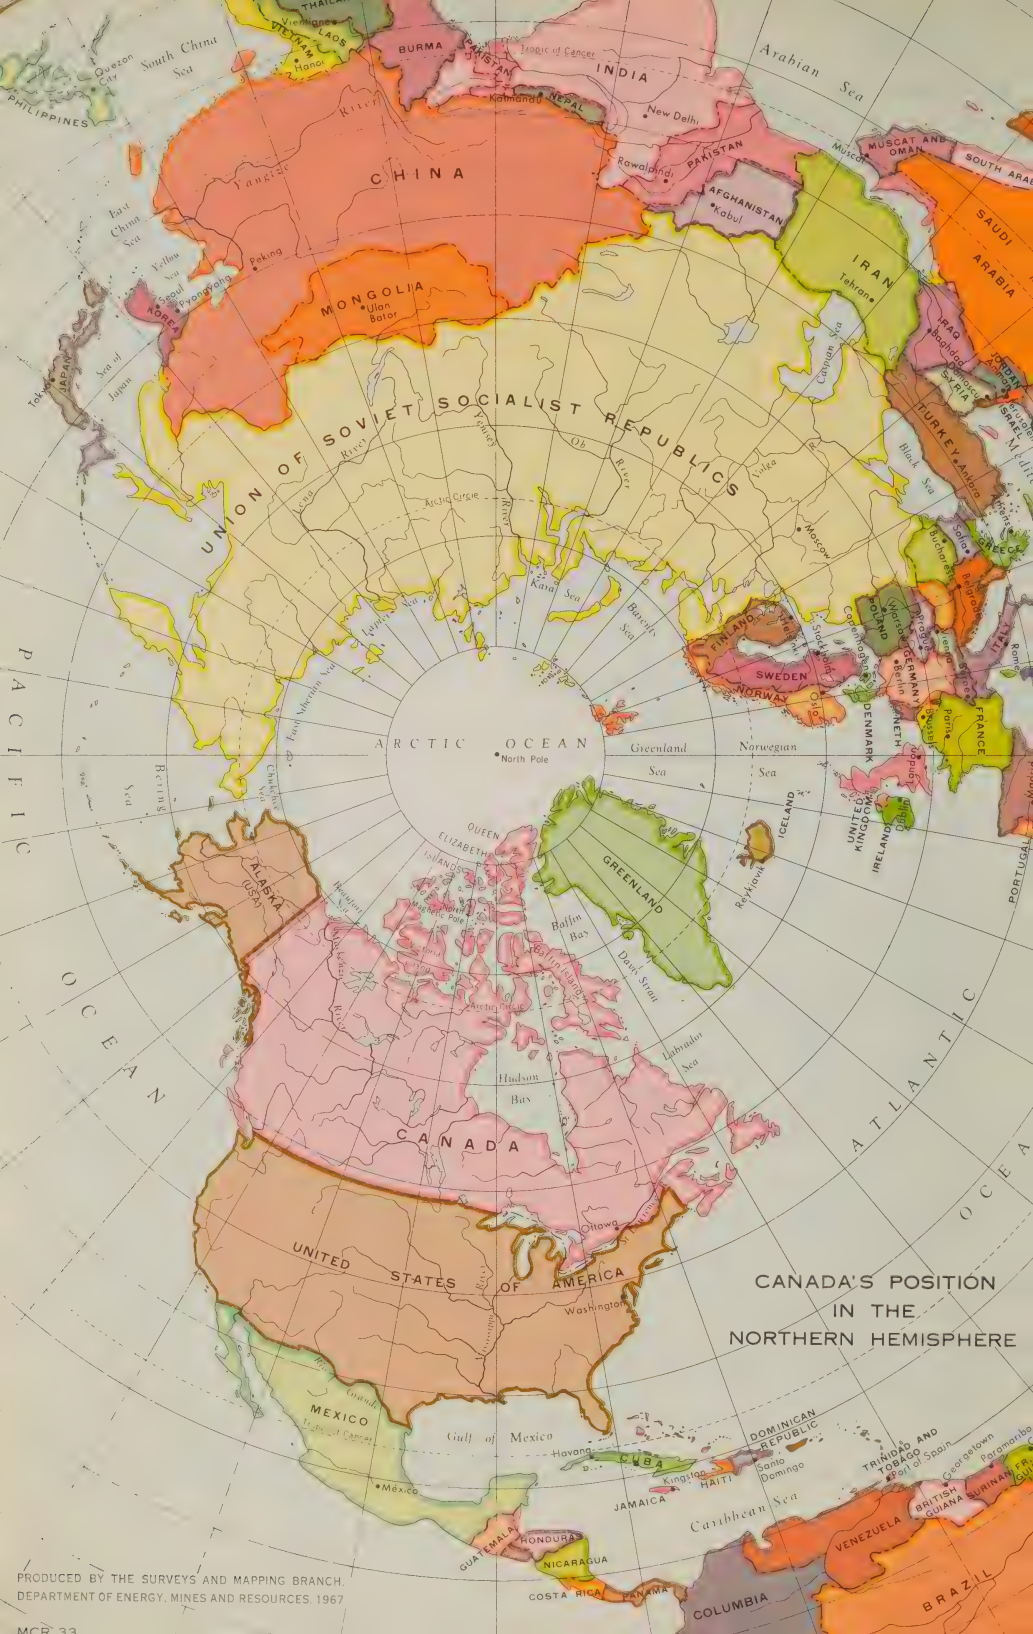

\* A description of the current surveying and mapping service of the federal Department of Energy, Mines and Resources is given at pp. 32–33.

Growth of geographical knowledge in the past quarter-century is indicated by the detail appearing in these maps of the same portion of the Canadian Shield in northern Ontario; the one above was drawn in 1940 and the one below in 1966.

CANADA'S POSITION  
IN THE  
NORTHERN HEMISPHERE

## Section 1.—Physical Geography\*

Canada occupies the northern half of the North American Continent with the exception of Alaska and Greenland, extending in longitude from Cape Spear, Newfoundland, at 52° 37' W, to Mount St. Elias, Yukon Territory, at 141° W, a distance of 88° 23' or 3,223 miles. In latitude it stretches from Middle Island in Lake Erie, at 41° 41' N, to the North Pole. The northernmost point of land is Cape Columbia on Ellesmere Island, at 83° 07' N, and the straight-line distance from Middle Island to Cape Columbia is 2,875 miles.

In shape, Canada resembles a distorted parallelogram with its four corners making important salients. In the north the salient formed by the Arctic Archipelago, which penetrates deep into the Arctic basin, guards the northern approaches to the Continent from Europe and Asia and makes Canada neighbour to the Union of Soviet Socialist Republics. In the south the salient of peninsular Ontario thrusts far into the heart of the United States. In the east the salient of Labrador and the Island of Newfoundland commands the shortest crossings of the North Atlantic Ocean and links Canada geographically with Britain and France. In the west the broad arc of land between Vancouver in southern British Columbia and Whitehorse in Yukon Territory provides the shortest crossings of the North Pacific Ocean between continental North America and the Far East. Canada thus lies at the crossroads of contact with the principal powers and some of the most populous areas of the world.

### 1.—Approximate Land and Freshwater Areas, by Province or Territory

NOTE.—A classification of land areas as agricultural, forested, etc., is given in Chapter X on Land Use and Renewable Resource Development.

Province or Territory	Land	Freshwater	Total	Percentage of Total Area
	sq. miles	sq. miles	sq. miles	
Newfoundland.....	143,045	13,140	156,185	4.1
Island of Newfoundland.....	41,164	2,195	43,359	1.1
Labrador.....	101,881	10,945	112,826	5.0
Prince Edward Island.....	2,184	—	2,184	0.1
Nova Scotia.....	20,402	1,023	21,425	0.6
New Brunswick.....	27,835	519	28,354	0.7
Quebec.....	523,860	71,000	594,860	15.4
Ontario.....	344,092	68,490	412,582	10.7
Manitoba.....	211,775	39,225	251,000	6.5
Saskatchewan.....	220,182	31,518	251,700	6.5
Alberta.....	248,800	6,485	255,285	6.6
British Columbia.....	359,279	6,976	366,255	9.5
Yukon Territory.....	205,346	1,730	207,076	5.4
Northwest Territories.....	1,253,438	51,465	1,304,903	33.9
Franklin.....	541,753	7,500	549,253	14.3
Keewatin.....	213,460	9,700	223,160	5.9
Mackenzie.....	493,225	34,265	527,490	13.7
<b>Canada.....</b>	<b>3,560,238</b>	<b>291,571</b>	<b>3,851,809</b>	<b>100.0</b>

In size, Canada is the largest country in the Western Hemisphere and the second largest country in the world. Its area of 3,851,809 sq. miles may be compared with that of the Union of Soviet Socialist Republics, 8,649,539 sq. miles,† China (including Taiwan and Pescadores), 3,705,408 sq. miles,† the United States of America (including Alaska and Hawaii), 3,615,211 sq. miles,† and Brazil, 3,286,488 sq. miles.† It is more than forty times the size of Britain and eighteen times that of France. The immense size of the country, while encompassing many resources and seeming to afford much scope for settle-

\* Revised by the Geographical Branch, Department of Energy, Mines and Resources, Ottawa.

† United Nations Statistical Yearbook, 1965.

ment, imposes its own burdens and limitations, particularly because much of the land is mountainous and rocky or is under an arctic climate. The developed portion is probably not more than one third of the total; the occupied farm land is less than 8 p.c. and the currently accessible productive forest land 19 p.c. of the total. The population of Canada, estimated at 19,919,000 as at June 1, 1966, may be compared with 192,119,000\* for the United States (including Alaska and Hawaii) (1964) and with 78,809,000\* for Brazil (1964).

The mileages in Table 2 are another indication of the size of Canada. They show the length of communication facilities required between the larger cities, between outlying industrial communities built up around large mining or smelting projects and the nearest cities, and between northern outposts and the supplying cities. In this table, mileage given is for the major means of transport used between the points concerned; air mileages are given for most transcontinental distances.

The length of Canada's southern border adjoining the United States is 3,986.8 miles and the length of the Yukon-British Columbia border adjoining Alaska is 1,539.8 miles.

## 2.—Travel Distances between Certain Cities and Other Points of Interest in Canada

NOTE.—The dash used in this table indicates that the distance concerned is of no particular interest. In each case the mileage given is for the type of travel most generally used—road (H), rail (R), air (A) or water (W); air mileages are given for most transcontinental distances. Water routes are given in nautical miles.

<sup>1</sup> Via Strait of Canso.

Politically, Canada is divided into ten provinces and two territories. Each province is sovereign in its own sphere and administers its own natural resources, and upon such

\* United Nations Population and Vital Statistics Report, Jan. 1, 1966.

resources, as related to topography, position and climate, is based the economy of the province. The resources of the Yukon and Northwest Territories, because of the remoteness, the great extent and the meagre and scattered populations of these areas, are administered by the Federal Government.

The main physical and economic characteristics of each province and territory are described in some detail in the 1963-64 Year Book; this article is available in reprint form. Also, it should be mentioned that the economic development of the country as a whole, based in the first instance on physical features and later on other factors, has formed regions quite distinct from the political divisions. These economic regions are described in an article appearing in the 1962 Year Book at pp. 17-23.

All geographical data on Canada that might be of use in promoting the country's economic, commercial and social welfare are available from the Geographical Branch of the Department of Energy, Mines and Resources. The work of this Branch includes the compiling of geographical material of national significance and the conducting of geographical surveys in the field. Land surface conditions, land use, types of vegetation and the structure of towns and cities are typical subjects of investigation. The Canadian Permanent Committee on Geographical Names, administered by the Branch, deals with all questions of geographical nomenclature affecting Canada and undertakes research and investigation into the origin and usage of geographical names. The Committee is composed of representatives of the federal mapping agencies and other federal agencies concerned with nomenclature and a representative appointed by each province.

### Subsection 1.—Inland Waters

The inland waters of Canada (not including saltwater areas that are a part of Canada) are extensive, constituting about 7.6 p.c. of the total area of the country. Aside from their basic essentiality to the support of life, Canada's fast-flowing rivers and chains of lakes have had a great bearing on the development of the country and on its economic and social well-being. In the early days of exploration and settlement, they were the avenues of transportation and often the source of subsistence. These functions have now diminished in importance; with the exception of the St. Lawrence and certain water routes in the interior and the Far North, the rivers and lakes have assumed other roles in the domestic, industrial, agricultural and recreational life of the people. They still serve as efficient carriers of pulpwood from the forests to the mills and their waters are harnessed to provide power for industry or are dammed and diverted to irrigate and bring life to otherwise waste land.

The inland waters of Canada are best studied by segregating the main drainage basins. The Atlantic drainage basin is the most important, being dominated by the Great Lakes-St. Lawrence system which drains an area of approximately 678,000 sq. miles and forms an unequalled navigable inland waterway through a region rich in natural and industrial resources. From Duluth, Minn., at the head of Lake Superior to Belle Isle at the entrance to the Gulf of St. Lawrence the distance is 2,280 miles. The entire drainage area to the north of the St. Lawrence and the Great Lakes is occupied by the southern fringe of the Canadian Shield—a rugged, rocky, plateau region over the edge of which tumble many swift-flowing tributary rivers. These rivers, as well as the St. Lawrence itself, provide the electric power necessary to operate the great industries of the area. South of the St. Lawrence, the smaller rivers are important locally. The St. John, for instance, drains a fertile area and provides most of New Brunswick's hydro power.

The Hudson Bay drainage basin, although the largest in area, is the least important economically. Only the Nelson and Churchill Rivers have power potential within econom-

ical distance of settled areas. The two main branches of the Saskatchewan River, tributary to the Nelson, drain one of Canada's great agricultural regions and are now the bases of important irrigation projects.

The Arctic drainage basin is dominated by the Mackenzie, one of the world's longest rivers, which flows 2,635 miles from the head of the Finlay River to the Arctic Ocean and drains an area in the three westernmost provinces of approximately 700,000 sq. miles. Except for a 16-mile portage in Alberta, barge navigation is possible from the end of steel at Waterways on the Athabasca River to the mouth of the Mackenzie, a distance of 1,700 miles.

The rivers of the Pacific basin rise in the mountains of the Cordilleran Region and flow to the Pacific Ocean over tortuous, precipitous courses, rushing through steep canyons and tumbling over innumerable falls and rapids. They provide power for large hydro developments and in season swarm with salmon returning inland to their spawning grounds. The major rivers of the basin are the Fraser which rises in the Rocky Mountains and toward its mouth flows through a rich agricultural area, the Columbia which is an international river with a total fall of 2,650 feet during its course and has thus a tremendous power potential, and the Yukon River which is also an international river but, though the largest on the Pacific slope, is at present relatively unimportant economically.

Table 3 lists the principal rivers of Canada and their tributaries. The tributaries and sub-tributaries are indicated by indentation of names; thus the Ottawa and other rivers are shown as tributary to the St. Lawrence, and the Gatineau and other rivers as tributary to the Ottawa.

## 3.—Lengths of Principal Rivers and Their Tributaries

The outstanding lakes of Canada are the Great Lakes, although only parts of these are in Canadian territory. The International Boundary between Canada and the United States passes through Lakes Superior, Huron, St. Clair, Erie and Ontario. Details are given in Table 4.

There are no tides in the Great Lakes although there is considerable variation in water levels caused by strong winds.

#### 4.—Elevations, Areas and Depths of the Great Lakes

Lake	Elevation Above Sea Level	Length	Breadth	Maximum Depth	Total Area	Area on Canadian Side of Boundary
	ft.	miles	miles	ft.	sq. miles	sq. miles

Other large lakes of Canada, ranging in area from 9,500 to 12,300 sq. miles, are Lake Winnipeg, Great Slave Lake and Great Bear Lake. Apart from these, notable for size, are innumerable lakes scattered over that major portion of Canada lying within the Canadian Shield. In an area of 6,094 sq. miles, accurately mapped, south and east of Lake Winnipeg, there are 3,000 lakes. In an area of 5,294 sq. miles, accurately mapped, southwest of Reindeer Lake in Saskatchewan, there are 7,500 lakes.

#### 5.—Elevations and Areas of Principal Lakes, by Province

NOTE.—Areas given are for mean water levels. For those reservoirs and lakes for which two elevations are given, HW means high water and LW low water. All elevations are in feet above mean sea level. "Total" refers to the area of the whole lake; "part" refers to the area within the designated province or territory.

## Subsection 2.—Coastal Waters

The coastline of Canada, one of the longest of any country in the world, comprises the following estimated mileages:—

**Mainland—**

Atlantic, 6,110; Pacific, 1,580; Hudson Strait, 1,245; Hudson Bay, 3,155; Arctic, 5,770; total, 17,860 miles.

**Islands—**

Atlantic, 8,680; Pacific, 3,980; Hudson Strait, 60; Hudson Bay, 2,305; Arctic, 26,785; total, 41,810 miles.

A comprehensive description of the coastal waters of Canada would require information from sciences such as oceanography, marine biology and meteorology. However, the basic factor in any study of the oceanic-continental margin is the physical relief of the sea floor, and the scope of the information presented here is therefore restricted to this and a few salient features of the Atlantic, Arctic and Pacific marginal seas surrounding Canada.

**Atlantic.**—Along this coastal area, the sea has inundated valleys and lower parts of the Appalachian Mountains as well as those of the Canadian Shield. The submerged continental shelf, protruding seaward from the shore, effects the transition from continental to oceanic conditions. This shelf is distinguished by great width and diversity of relief. From the coast of Nova Scotia its width varies from 60 to 100 miles, from Newfoundland 120 to 50 miles (at the entrance of Hudson Strait), and northward it merges with that of the Arctic Ocean. The outer edge of the shelf, known as the continental shoulder, is of varying depths of from 100 to 200 fathoms before the shelf suddenly gives way to the steep declivity leading to abyssal depths. The over-all gradient of the Atlantic continental shelf is slight but the whole area is studded with shoals, plateaux, banks, ridges and islands and the coasts of Nova Scotia and Newfoundland are rugged and fringed with islets and shoals. Off Nova Scotia the 40-fathom line lies at an average of 12 miles from the shore and constitutes the danger line for coastal shipping. The whole floor of the marginal sea appears to be traversed by channels and gullies cutting well into the shelf.

The main topographical features of the Atlantic marginal sea floor are attributed to glacial origin but land erosion is an important factor. Eroded materials are carried seaward by rivers, ice and wind, and wave action against cliffs and shore banks washes away enormous masses that are deposited over the surrounding sea floor. The topography of the continental sea floor is therefore constantly changing and navigation charts of Canada's eastern seaboard must be continuously revised.

Hudson Bay and Hudson Strait bite deeply into the Continent. Hudson Bay is an inland sea 250,000 sq. miles in area having an average depth of about 70 fathoms; the greatest charted depth in the centre of the Bay is 141 fathoms.

Hudson Strait separates Baffin Island from the continental coast and connects Hudson Bay with the Atlantic Ocean. It is 430 miles long and from 37 to 120 miles wide and its greatest charted depth of 481 fathoms is close inside the Atlantic entrance. Great irregularities of the sea floor are indicated but, except in inshore waters, few navigation hazards have been located.

**Arctic.**—The submerged plateau extending from the northern coast of North America is a major part of the great continental shelf surrounding the Arctic Ocean, on which lie all the Arctic islands of Canada, Greenland, and most of the Arctic islands of Europe and Asia. This shelf is most uniformly developed north of Siberia, where it is about 500 miles wide; north of North America it surrounds the western islands of the Archipelago and extends 50 to 300 miles seaward from the outermost islands.

The topography of the floor of the submerged part of this continental margin is only partly explored but sufficient has been charted to indicate, in common with continental shelves throughout the world, an abrupt break at the oceanward edge to the relatively steep declivity of the continental slope. This slope borders the western side of the Queen Elizabeth Islands and, from it, deep well-developed troughs enter between the groups of islands. Sills across Davis Strait, Barrow Strait and other channels, on which the depth is about 200 fathoms, interrupt the network of deep troughs and separate the Arctic basin from the Atlantic.

That part of the continental shelf bordering the Arctic Ocean in the vicinity of the Queen Elizabeth Islands (see p. 16) is the subject of extensive study. Since 1959 a party based at the joint Canadian-United States weather station at Isachsen on Ellef Ringnes Island has been investigating the oceanography, hydrography, submarine geology, gravity, geomagnetic features and crustal seismic properties of the continental shelf area, carrying out physiographic, hydrological, permafrost and glaciological studies on the islands of the region, mapping the nature, distribution and movement of the sea ice, and running basic topographic control surveys. This work is continuing, with a party in the field from March to September each year, and should eventually cover all of the unmapped parts of the shelf between Greenland and Alaska. The investigations should yield detailed and accurate information on the physical and chemical composition and dynamic characteristics of the Arctic oceanic waters; the bathymetry of the continental shelf and slope and the straits and sounds of the Archipelago; the topography and structure of the shelf and the nature of its sediments, its underlying rocks and possible mineral resources; the structure and physical characteristics of the northern edge of the North American continental platform and its contact with the Arctic Ocean basin; the factors controlling the development of the Arctic landscape and the evolution of the islands; and the changes in sea level, glaciers, sea ice and climate in the recent geological past.

**Pacific.**—The marginal sea of the Pacific differs strikingly from the other marine zones of Canada. The hydrography of British Columbia is characterized by bold, abrupt relief—a repetition of the mountainous landscape. Numerous inlets penetrate the mountainous coast for distances of 50 to 75 miles. They are usually a mile or two in width and of considerable depth, with steep canyon-like sides. From the islet-strewn coast, the continental shelf extends from 50 to 100 sea miles to its oceanward limit where depths of about 200 fathoms are found. There the sea floor drops rapidly to the Pacific deeps, parts of the western slopes of Vancouver Island and the Queen Charlotte Islands lying

only four miles and one mile, respectively, from the edge of the declivity. These great detached land masses are the dominant features of the Pacific marginal sea. As is to be expected in a region so irregular in hydrographic relief, shoals and pinnacle rocks are numerous, necessitating cautious navigation.

### Subsection 3.—Islands

The largest islands of Canada are in the North and all experience an arctic climate. The northern group extends from the islands in James Bay to Ellesmere Island which reaches 83° 07'N. Those in the District of Franklin lie north of the mainland of Canada and are generally referred to as the Canadian Arctic Archipelago; those in the extreme north—lying north of the M'Clure Strait—Viscount Melville Sound—Barrow Strait—Lancaster Sound water passage—are known as the Queen Elizabeth Islands.

On the West Coast, Vancouver Island and the Queen Charlotte Islands are the largest and the most important but the coastal waters are studded with many small rocky islands.

The Island of Newfoundland forming part of the Province of Newfoundland, the Province of Prince Edward Island, Cape Breton Island forming part of the Province of Nova Scotia, Grand Manan and Campobello Islands forming part of the Province of New Brunswick, and Anticosti Island and the Magdalen group included in the Province of Quebec are the largest islands off the East Coast.

Notable islands of the inland waters include Manitoulin Island (1,068 sq. miles in area) lying in Lake Huron, the so-called Thirty Thousand Islands of Georgian Bay and the Thousand Islands in the outlet from Lake Ontario into the St. Lawrence River.

## Subsection 4.—Mountains and Other Heights

The predominant geographical feature in Canada is the Great Cordilleran Mountain System which contains many peaks over 10,000 feet in height. The highest peak in Canada is Mount Logan in the St. Elias Mountains of Yukon Territory, which rises 19,850 feet above sea level. The highest elevations in all parts of the country are shown in Table 7 in feet above mean sea level.

## 7.—Principal Heights in each Province and Territory

NOTE.—Certain peaks, indicated by an asterisk (\*), form part of the boundary between political divisions. Although their bases technically form part of both areas, they are listed only under one to avoid duplication. Elevations are given in feet above mean sea level.

## Section 2.—Geology and Economic Minerals of Canada\*

The bedrock foundation of Canada and its adjacent continental shelves seem rigid and unchanging to human eyes, yet, in terms of geological time, these rocks and their contained mineral wealth represent only a momentary stage in the evolution of the Continent, an evolution which began more than 4,000,000,000 years ago. Geological study of most of the present land surface of Canada has shown that at various periods and in various regions dark molten rocks rose from great depths, volcanoes erupted on the ancient land and sea floors, thick sequences of sediments accumulated, granites were either intruded as molten magma or derived from earlier rocks during intense folding and mountain building, erosion wore down or subdued the older mountain chains, shallow seas repeatedly encroached on and receded from the Continent of today, continental glaciers covered most of Canada and, as part of these geological processes, valuable minerals and fossil fuels became concentrated under exceptionally favourable conditions. These interrelated geological processes have produced the buried crust and the present face of Canada. They control the distribution of its economic mineral deposits, its physiography and, in large part, its present and potential land use.

To introduce some relatively simple concepts, let us go back in geological time and select a few examples in which erosion of land, deposition of the resulting detritus, and a series of favourable circumstances have concentrated valuable minerals for man's use. Geological processes are best understood when they can be observed in action at the earth's surface or in relatively shallow lakes or oceans. Modern Atlantic waves, pounding on exposed cliffs of the Maritime Provinces, greatly accelerate the rate of erosion. Fallen blocks are rounded and abraded on the cobble beaches, while waves and currents sweep the sand and rock flour along the coast to sandy beaches or spits, or carry them seaward to add to the slowly growing sedimentary beds of the continental shelf. This natural erosion and

\* Prepared by W. D. McCartney with Grenville and Interior Plains sections from an earlier report by A. H. Lang and revision of Cordilleran section by D. J. T. Carson, Geological Survey of Canada.

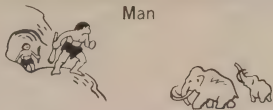

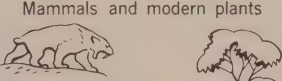

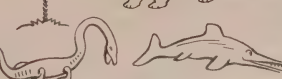

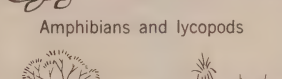

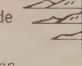

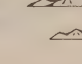

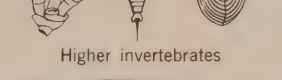

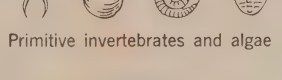

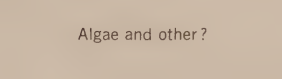

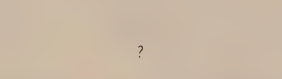

milling action also releases valuable minerals from their enclosing rock. In almost all cases, these valuable minerals are dispersed or only slightly concentrated but, given a rare combination of favourable erosional and current conditions, and because of the relatively high density and physical and chemical stability of some valuable minerals, they may lag behind their lighter fellows of equal size and become concentrated as placer deposits of commercial value. Gold has been recovered in modest quantities from the beach sands of Cunard Cove, Nova Scotia, and is still being freed from the nearby cliffs. More commonly, placer deposits result from the erosion of inland areas and subsequent river transport. The famous gold placer deposits of the Yukon were formed in river channels more than 1,000,000 years ago, at a time when mastodons and sabre-toothed tigers roamed the area. In Nova Scotia, at Gay's River, gold was similarly but less efficiently concentrated in coarse gravels about 350,000,000 years ago, at a time when giant reptiles were the dominant form of life on earth. These gravels were subsequently covered by thousands of feet of sands and muds, washed from the newly formed Appalachian Mountains.

The probable history of the vast uranium deposits of Elliot Lake, Ontario, even though it began more than 1,600,000,000 years ago, has been deciphered by geologists. Geological studies on the surface, underground and in the laboratory indicate that a granitic land mass of modest relief lay to the north of the present Elliot Lake district. Over an extended stable period, these rocks were deeply weathered and all but the most chemically inert minerals such as quartz were broken down to clay and disintegrated materials. At the beginning of Aphebian time, uplift or tilting of this weathered land occurred and mechanical, rather than chemical, erosion became dominant. Rivers swept the rotted upper layers of decomposed rock to the southeast. Quartz pebbles moved along and became rounded in the river channels and, because they were the largest remaining materials, formed blankets of gravel, and filled channels as the gradient and current of the rivers decreased. At the same localities, fine-grained sands and clays continued to be swept seaward. However, even small grains of abnormally heavy minerals such as uraninite, zircon and monazite, which had also resisted earlier chemical decomposition, could not be carried so readily by the waning currents and came to rest in the spaces between the rounded pebbles of quartz. Following this first flushing of the deeply weathered land mass, erosion and transport continued and many thousands of feet of Huronian sediments buried the uranium-rich quartz gravels. Subsequent lithification, folding, mineralogical changes, and further intervals of erosion during 1,500,000,000 years produced folded, uraniferous quartz conglomerates which lie below and locally intersect the present earth surface. These exposed rocks were used to prepare the geological map of the district published by the Geological Survey of Canada in 1925. In 1952, after the uranium content of these conglomerates had been deduced by exploration geologists, this geological map proved invaluable because it outlined the sinuous distribution of the potential ore-bearing formations and accelerated the development of this large mining camp.

The above examples outline only one set of many dynamic geological processes. Geological maps and knowledge of such things as ancient geography, direction of flow of ancient rivers, and the character and degree of weathering of ancient land masses should be known if intelligent evaluation is to be made of the long-range mineral potential of the nation for undiscovered placer deposits of the above types. Apart from uranium, most mineral production comes from a wide variety of other types of deposit. Some, such as asbestos, are formed by alteration of particular rocks of high iron and magnesium content. In other cases, under favourable conditions, major parts of the rock itself can be mined or quarried. Examples include limestone, nepheline syenite, rock salt, gypsum and potash. Space does not permit an attempt here to point out the interrelation of mineral deposits to their geological setting and, in many cases, much remains to be learned about the origin of many types of base and precious metal ores. However, ore deposits are not randomly distributed 'freaks', but comprise rare concentrations of materials formed under particularly favourable geological conditions during the building of the Continent. Efficient exploration by mining companies and evaluation of the mineral potential of the nation depend on geological information and knowledge, augmented by geophysical and geochemical tech-

niques. By 1966, geological maps had been published covering about 75 p.c. of Canada's land surface, and geophysical maps showing variations in magnetic intensity caused by various types of rocks had been published by federal and provincial agencies covering 38 p.c. of the country as well as parts of the continental shelf. (See also pp. 32-33.)

The primary geological subdivisions of Canada are outlined in the following sections. The Canadian Shield forms the ancient nucleus of the Continent. As well as comprising the vast areas exposed in Central and Northern Canada, the Shield extends beneath the veneer of younger marine sediments exposed at the present surface in the Hudson Bay region, some Arctic islands, the St. Lawrence Lowlands and the Interior Plains. West of the Interior Plains, and north and southeast of the Canadian Shield, deep, elongate troughs (geosynclines) developed. These geosynclines received sediments and volcanics which, by folding, were converted into the mountain belts of the Cordilleran, Innuitian and Appalachian regions.

**The Canadian Shield.**—Precambrian evolution of the present Canadian Shield extended over more than five sixths of known geological time. During this immense interval, many cycles of volcanism, sedimentation, intrusion, metamorphism, mountain building, erosion and ore formation have been completed. The complexities of this history have become better understood as the rate of geological reconnaissance mapping, with the support of helicopters since 1952, has increased and as absolute ages of minerals have been determined by isotopic ratios from about 1,500 well-distributed samples of the Canadian Shield. Many of the absolute ages represent the ages of four main orogenic periods, as indicated on the geological time chart facing p. 20. The facing map shows the eight structural provinces currently recognized in the Shield. Each structural province is defined by the equivalent isotopic ages of their terminal orogenies as well as being characterized by variations in rock types, degree of metamorphism, and dominant types of ore deposits. Following one or more major orogenies in a region, that portion involved was stabilized, and relatively undeformed younger Precambrian erosion products were deposited to form basins of cratonic cover rocks, most of which are shown on the map of the Shield. These relatively undeformed late Precambrian basins and remnants of early Palaeozoic sediments show that the Canadian Shield has been remarkably stable since late Precambrian time, subject only to encroachment of younger seas and varying degrees of uplift.

Pleistocene glaciation, with scouring of bedrock and deposition of clastic materials, has profoundly affected the present drainage and physiography of the region.

The rocks of the Superior and of the far smaller Slave and Eastern Nain structural provinces were intruded by granites and folded during the Kenoran orogeny about 2,500,000,000 years ago. The Superior province now comprises a succession of folded belts of volcanic and sedimentary rocks trending east-west, separated by considerably larger areas of granite gneiss and granitic rocks. The elongate remnants of folded greenstone belts within the granitic terrane are up to 300 miles in length. Parts of these folded belts are dominantly sedimentary greywackes and slates which include iron-formations but are not known to contain major sulphide ore deposits. Other parts comprise dominantly mafic, somewhat altered volcanics (greenstones), lesser but economically significant rhyolitic volcanics, various types of economic and non-economic iron-formations which are being mined at four or more localities, some greywacke, slate and graphitic slate and, in association with these rock types, massive pyritic ore deposits containing zinc, copper, silver and gold. Deposits of this type at Noranda, Timmins, Manitouwadge, Matagami and Chibougamau rank among the large base-metal deposits of the world. Famous gold-quartz vein deposits are mined in the greenstone belts at Timmins, Kirkland Lake and Noranda-Val d'Or areas. In the Slave province, structural trends are more irregular than in the Superior province, but the important gold veins of the Yellowknife district and gold deposits being evaluated south of Bathurst Inlet also lie in volcanic belts. Deposits associated with pegmatites of the late stages of Kenoran granites contain lithium, molybdenum, beryllium and caesium.

Following the Kenoran orogeny in the Superior province, thick sedimentary beds of Proterozoic age were derived from the erosion of the deformed Archæan rocks in the region north of Lake Huron, and basal conglomerates of the Huronian beds at Elliot Lake contain about one third of the reported uranium reserves of the world. Even younger undeformed beds and diabase sills about 100 miles northeast of Lake Huron form cratonic cover rocks about 2,100,000,000 years old and contain the famous silver-cobalt veins of the Cobalt mining camp. In the same general region, the noritic intrusions near Sudbury were later emplaced during the Hudsonian orogeny to yield the world-renowned nickel-copper-platinum deposits of the Sudbury basin. As a result of these geological processes of many types and of varied Precambrian age, a belt about 150 miles wide extends north-east from Lake Huron and lies to the northwest of the Grenville province. This belt has produced a great proportion of Canada's gold and base-metal production to date.

The Churchill province is exposed as a giant arc underlying northern Manitoba and Saskatchewan, much of the Northwest Territories, the northern tip of Quebec and the Labrador Trough. The rocks of the Churchill province and the much smaller Bear and Southern provinces were folded, metamorphosed to various degrees, and intruded by granitic rocks during the Hudsonian orogeny about 1,700,000,000 years ago. The general rock types of these provinces are similar to those of the Superior province. In the southwestern Churchill province in northern Manitoba, major nickel deposits with lesser copper are being mined from both gneisses and from metamorphosed mafic intrusions which lie adjacent to the boundary of the Superior province. Nickel-copper ore is also mined from contorted gneisses at Lynn Lake, and numerous massive sulphide base-metal deposits in greenstones have been exploited in the Flin Flon district. Farther north, beginning on the north shore of Lake Athabasca at the Beaverlodge uranium camp, a belt of greenstones, sediments and their metamorphosed equivalents extend northeastward to Hudson Bay. Rankin Inlet, near which nickel was formerly mined, lies at the eastern exposed end of this imperfectly known belt. Relatively inaccessible belts such as this, although seemingly favourable for ore deposits, have not been prospected nearly as intensively as similar geological environments in more populated areas. Most of Baffin Island is underlain by contorted rocks of the Churchill province. Of particular interest is the recent discovery and serious evaluation of an exceptionally high-grade iron deposit in northwestern Baffin Island. Of geological interest are intricately folded formations of marble in southern Baffin Island, a rock type generally uncommon in the pre-Grenville portions of the Canadian Shield. A greenstone belt in the Churchill province containing nickel and asbestos occurrences of potential economic interest lies at the northern tip of Quebec and extends easterly from Cape Smith, Hudson Bay. Of major importance is the extension of the Churchill province as the Labrador Trough south from Ungava Bay to its merging and metamorphic involvement with the Grenville province. Rocks of the Labrador Trough adjacent to and east of the older Superior province are not significantly metamorphosed but are converted to schists and gneisses farther to the east. The relatively unmetamorphosed western belt comprises slate, quartzite, dolomite and cherty iron-formation, with mafic volcanics abundant farther to the east. In many parts of the western trough, iron-formation has been closely folded and much of the silica removed. These enriched portions, together with their metamorphosed equivalents which extend into the Grenville province, now provide the bulk of Canada's iron ore production.

A large part of the Shield, extending from Georgian Bay to the Strait of Belle Isle, has long been recognized as forming a distinct segment called the "Grenville". It was named after the Grenville series, characterized by crystalline limestone, impure limy strata, and large areas of sedimentary gneisses in various stages of alteration to granite. The eastern part of the province contains large igneous intrusions of anorthosite. The age relations between Grenville strata and those of the neighbouring Superior province are puzzling. Near Sudbury, as well as at the south end of the Labrador Trough, beds can be traced across the boundary into more metamorphosed rocks of Grenville type. It is believed, therefore, that the distinctive features of the Grenville may be related more to the time and degree of metamorphism than to distinctions in the original age of deposition of

strata. The Grenville province contains an unusually large variety of mineral occurrences but has not been as important a producer as the Superior. Several fairly large deposits are mined, including those of nepheline syenite near Peterborough, iron of the magnetite variety at Bristol and Marmora, zinc and lead in the Ottawa Valley and iron and titanium near Havre St. Pierre. Large iron deposits are in production at the southern extension of the Labrador Trough.

The areas of undeformed Precambrian cratonic cover rocks shown on the map facing p. 21 represent dominantly clastic detritus washed into basins from the consolidated, nearby, older rocks. At times, marine incursions into these basins led to deposition of limestone and dolomite, and volcanics were deposited in others. Copper deposits similar to those of the Keweenaw Peninsula of Michigan, copper-uranium-vanadium in sandstones, and base metals in some of the limestones of the cover rocks could be present in this geological environment but economic deposits of this type have not yet been discovered.

**The Appalachian Region.**—This region comprises the Maritime Provinces and southeastern Quebec and is the northern continuation of a long belt of folded strata extending along the eastern side of the United States. It is on the site of a long, linear trough or geosyncline that existed mainly in Palaeozoic time in which great thicknesses of sedimentary and volcanic strata were laid down. The northwestern boundary of the region lies adjacent to the Canadian Shield and to the St. Lawrence Lowlands. The strata in the Appalachians have been folded and faulted along axes that strike northeasterly except for local regions such as the Gaspé Peninsula where strikes swing to the east. Thus, strata of different kinds and ages and some belts of intrusive rocks normally form northeasterly-trending bands, many of which are responsible for development and orientation of peninsulas, bays and ridges of the region. Two principal periods of orogeny called the Taconic and the Acadian have been recognized. The Taconic occurred near the close of Ordovician time and the Acadian about Middle Devonian time. In Canada the Taconic disturbances were fairly widespread, the Acadian were more so, affecting areas that were previously affected by the Taconic as well as areas that were not, and the Appalachian orogeny, which was a major feature in parts of the United States, was of minor and local importance.

Metamorphosed Precambrian rocks of Grenville type are exposed to form the Long Range of western Newfoundland and small areas in Cape Breton and New Brunswick. On the east flank of the Appalachian geosyncline, as exposed in southeast Newfoundland, younger Precambrian volcanics and sediments are relatively unaltered and were intruded by small granite bodies 580,000,000 years ago. Although Precambrian rocks probably underlie much of the central Appalachians, they are buried beneath the thick Palaeozoic sequence. Pyrophyllite in southeast Newfoundland is the only product being mined from Precambrian rocks in the Canadian Appalachians.

Cambrian slates, minor limestones and local areas of volcanics lie above and adjacent to Precambrian rocks. Massive sulphide deposits in schists derived from Cambrian volcanics in southern Cape Breton and southeast Quebec were formerly mined. The overlying Ordovician beds were formed at the early stage of development of the Appalachian geosyncline. From west to east, and depending on their position in the geosyncline, the thick Ordovician sections comprise limestone and/or slate in western Newfoundland and adjacent to the St. Lawrence Lowlands in southeast Quebec. Mineral occurrences of zinc and lead-zinc are currently being evaluated in dolomitic limestones. Of major economic importance are Ordovician submarine volcanic rocks and their metamorphic equivalents in north-central Newfoundland, the Bathurst district of northern New Brunswick, and the Eastern Townships of southeast Quebec. These rocks are the hosts for all the massive, pyritic base-metal deposits being mined and developed in the Canadian Appalachians. In particular, the Bathurst mining camp and its new smelter complex promises to be a major factor in the economy of the region for many years, and the Buchans mine in central Newfoundland has produced since 1928 from orebodies which contained more than 15,000,000 tons of ore. East of this Ordovician volcanic belt, thick deposits of slates and sandstones were formed at the same time as the mineral-bearing volcanics were

being deposited. Mineral deposits formed during sedimentation include the Wabana iron mine in southeast Newfoundland which terminated operations early in 1966 after about 70 years of continuous production. Some 490,000,000 years ago, molten ultramafic rocks rose from great depths and were emplaced as thin, tabular bodies mainly in the volcanic Ordovician areas. Subsequent alteration of parts of these folded, elongate bodies has produced the giant asbestos deposits of the Eastern Townships of Quebec, and one deposit being mined in northeast Newfoundland. Occurrences of nickel or chromite associated with the ultramafics seem of limited economic promise to date, although minor production has been attained. Silurian strata are rather similar to Ordovician rocks but are not known to contain large mineral deposits. Unlike the Ordovician submarine volcanics, some or most of the Silurian volcanics were formed on land. This may be one factor in the marked difference in known ore content of the two volcanic assemblages.

In Devonian time, granite batholiths were emplaced in the Maritime Provinces, and smaller stocks of the same age were intruded in Gaspé and southeastern Quebec. At this time, older beds were folded and metamorphosed to varying degrees, particularly near the margins of the granites. An important deposit currently being mined and supporting its smelter at Murdochville in central Gaspé will provide several tens of millions of tons of low-grade copper ore from altered limy slates above one buried granitic stock of Devonian age. Other similar deposits are being actively explored in the district. In Ordovician sediments near granites of Nova Scotia, scores of gold-bearing quartz veins were mined from 1862 to 1957 but the individual veins are not likely to be workable under present conditions. Fluorite in veins within Devonian granitic rocks at St. Lawrence, Newfoundland, have been mined since 1933 and currently yield all of Canada's production. Tungsten and molybdenum deposits associated with granites in central New Brunswick, southeast Quebec and southern Newfoundland are re-appraised periodically but have not been mined.

Following the folding and granite intrusion that formed the Appalachian Mountains, adjacent basins were rapidly filled with coarse and progressively finer-grained detritus eroded from the adjacent mountains. Some areas included marine beds, such as the petroliferous Albert shales of eastern New Brunswick which yield oil and gas. Other areas were the sites of rhyolitic volcanism early in Mississippian time, and rocks of one such centre in southern New Brunswick contain a deposit of tin, lead, zinc and molybdenum, which has been extensively investigated. After initial infilling of basins, shallow Mississippian seas encroached on the valleys and deposited limestones. Where evaporation exceeded the rate of saltwater inflow to these marine basins, evaporites were precipitated to form commercial deposits of rock salt and gypsum, and known occurrences of potash minerals. Native sulphur in unknown quantity is associated with evaporites in central Nova Scotia. A large deposit of barite with associated lead-zinc-silver ore is mined from replaced Windsor rocks at Walton, Nova Scotia, and many rather similar occurrences are known elsewhere in Windsor limestones. Many thousands of feet of clastic sediments were deposited after the Windsor seas retreated. These beds of Pennsylvanian age contain the commercial coal measures of Nova Scotia. In Triassic time, outpourings of basalt, particularly preserved adjacent to and below the Bay of Fundy, terminated rock-forming processes in the Appalachians. Subsequent erosion has yielded the present, fairly subdued topography of this former mountain chain.

**The Cordilleran Region.**—The Cordillera of Western Canada consists of three parallel northwest-trending geological and topographical systems. The Eastern System of western Alberta, eastern British Columbia, eastern Yukon, and western Northwest Territories includes the Rocky, Richardson, Franklin and Mackenzie Mountains and foothills, and several intervening plateaux. Comprising the Western System are the Coast Mountains along the west mainland of British Columbia, the St. Elias Mountains in southwest Yukon, the Queen Charlotte Islands and Vancouver Island. The Interior System lies between the Eastern and Western Systems. It contains the plateaux, plains and subdued mountain ranges of the interior of British Columbia and Yukon Territory.

Unmetamorphosed Precambrian to Cretaceous sedimentary strata form most of the Eastern System. These sedimentary strata, which have been uplifted several thousand feet by fault movements, are well exposed in the Rocky Mountains. The Interior System is composed largely of metamorphic, sedimentary and volcanic rocks of Precambrian to Mesozoic ages, which are intruded by numerous, generally unconnected, granitic stocks and batholiths. In places, these rocks are overlain by great thicknesses of Cretaceous and Tertiary volcanic and sedimentary strata. Flat-lying Tertiary basalt flows form many of the plateaux. In the Western System, the rugged Coast Range consists of almost continuous exposures of steeply eroded granitic rocks of Mesozoic and Tertiary ages flanked on both sides by late Palæozoic and Mesozoic volcanic rocks and by basins of Cretaceous and Tertiary sedimentary rocks.

During late Precambrian times, beds of quartzite, argillite, dolomite and other sedimentary rocks now comprising the Purcell and Windermere beds were deposited in the eastern Cordilleran geosyncline, a vast shallow sea that extended from south of the present Canada-United States border to the Arctic Ocean. From Cambrian until mid-Devonian time, sedimentary strata consisting of shale, quartzite and limestone continued to be deposited in the area which now forms the Eastern and Interior Systems. In southeastern British Columbia, the world-famous Sullivan zinc-lead orebody lies in Purcell beds and is thought to have formed during late Precambrian time.

Beginning in the mid-Devonian and lasting until early Jurassic, the Western System and most of the Interior System consisted of a deep oceanic trough in which accumulated submarine basalts and fine argillaceous and cherty sediments such as those of the Permo-Carboniferous Cache Creek Series and the Triassic Takla Series. Meanwhile, sedimentary strata were forming in the more shallow waters of the Eastern System, east of the present Rocky Mountain Trench. Thus, in the Rocky Mountains, Palæozoic limestones, dolomite, quartzite and shale are overlain in many places by similar Mesozoic rocks.

The first large granitic bodies were intruded into rocks of the Interior and Western Systems during early Jurassic time. They were composed mainly of granodiorite and quartz diorite, but ranged in composition from gabbro to granite. These intrusions were accompanied by folding, faulting and metamorphism. Although this orogeny may have been most intense during late Jurassic to early Cretaceous time, intrusion continued until early Tertiary time. Many mines in the Cordillera are related to Mesozoic and Tertiary intrusions. Uplift of the rocks during these processes created mountain chains and, by early Cretaceous time, rhyolites, andesites, basalts and sediments were being deposited in inter-mountain basins largely separated by the uplifted areas. Erosion of the mountains followed and, in late Cretaceous time, sandstones, conglomerate, shale and extensive beds of coal accumulated in large isolated basins such as that now occupied by the Nanaimo Series on Vancouver Island. Gradual uplift continued so that by Tertiary time the basins were very local and entirely continental. Sandstones and other sediments derived from elevated areas continued to be deposited in the low-lying valleys.

Uplift and mountain-building in the Eastern System was delayed until the Laramide Orogeny in early Tertiary time. Unlike the earlier orogenies to the west, no significant granitic bodies were intruded in the Eastern System. In many parts of the Rocky Mountains, Precambrian and Palæozoic strata were thrust several miles to the east along low-angle westward-dipping fault planes. Thus, these transported older rocks commonly came to rest above younger beds. At the same time and again in late Tertiary time, the eroded Western and Interior System rocks, as well as those of the Eastern System, were again uplifted. Erosion, including glacial scouring, which in places has continued to the present day, formed deep valleys in the elevated rocks and has produced the present configuration of the Coast Range, the Rockies and the intervening mountain chains.

In the Interior System, much lava was deposited on the plateaux at various times during the Tertiary Period, mainly in or about Miocene time. The lavas are chiefly basaltic and apparently welled from long fractures rather than from individual volcanoes. Sandstone, shale and volcanic ash were deposited in local freshwater basins in the same belt.

In latest Tertiary and Pleistocene times, some uplift and minor volcanic deposition occurred in the Western and Interior Systems. Very recent, post-glacial volcanic activity is represented by several well-preserved cinder cones in north, southwest and central British Columbia.

Glaciation, as in other parts of Canada, was widespread in the Cordillera during the Pleistocene Epoch, and glaciers persist today in many mountain systems, chiefly in the St. Elias and Coast Mountains and the Columbia Ice Field in the Rockies. A large part of the Yukon Territory, however, escaped Pleistocene glaciation because the high St. Elias Mountains barred moisture-laden winds from the Pacific to such an extent that ice did not accumulate in parts of the interior, despite the depressed temperatures of the time. This lack of glaciation was largely responsible for the preservation of the Klondike placer gold deposits.

The Cordilleran region has long been an important producer of economic minerals. Coal mining thrived over 100 years ago at Nanaimo on Vancouver Island and the gold rushes to the Klondike and Cariboo-Fraser Rivers regions resulted in the economic development of the Yukon and the interior of British Columbia. Present mineral production for the Cordillera is approximately one tenth of the Canadian total.

All parts of the Western and Interior Systems, except those covered by Tertiary plateau lavas and sediments, are favourable for the occurrence of metals. Metal occurrences are very minor in the Eastern System but appreciable amounts of oil and natural gas are found, mainly in the foothills.

Many of the metallic mineral deposits are related to granitic intrusions of the Jurassic to Tertiary intrusive cycle but others may have been present before the cycle and some were probably metamorphosed by the intrusions. Copper, gold, molybdenum and iron are the main metals produced in the Western System and western portions of the Interior System, whereas lead, zinc and silver are most important in the eastern parts of the Interior System. The ores in general are complex and a single mine may supply gold, silver, copper, lead and zinc.

The lead-zinc-silver mines of the eastern part of the Interior System in the Kootenay and Slocan districts of southeast British Columbia occur in Precambrian and lower Palaeozoic sedimentary rocks. The Precambrian Sullivan orebody of the Kootenay district is one of the largest lead-zinc-silver deposits in the world. Another large producing area is at Mayo in the Yukon Territory. Cadmium, antimony and bismuth are recovered from many of the lead-zinc-silver ores.

Most copper ores of the region are large low-grade sulphide deposits related to Mesozoic or Tertiary granitic bodies. These include the Bethlehem deposits at Highland Valley, British Columbia, the Britannia mine near Vancouver, and several deposits that will soon be mined in the Smithers, Stewart and Stikine areas of the northern part of the province. Many of these mines contain recoverable molybdenum. High-grade skarn copper deposits occur at Merritt in the interior of British Columbia and on Vancouver Island.

Owing to intense mineral exploration in recent years, British Columbia has become a major producer of molybdenum. Large deposits at Endako and a smaller high-grade deposit at Boss Mountain are at present being mined. They are related to Mesozoic batholiths. Other promising large deposits are undergoing exploration or development.

The gold-quartz veins of British Columbia appear to have been derived from Mesozoic and Tertiary batholiths. Only two deposits of this type are at present being mined and most gold produced in the Cordillera is derived as a by-product of copper, iron and lead-zinc mining. The rich placer deposits that sparked the beginning of the mining industry in the Cordillera are of minor modern importance.

Iron deposits containing magnetite are being mined on Vancouver Island, the Queen Charlotte Islands and Texada Island. They occur in skarn zones along the contacts between granitic intrusions and Triassic limestone. Precambrian sedimentary iron deposits in the Yukon Territory may be developed in the future.

Mercury was mined mainly at Pinchi Lake, British Columbia, during World War II. These occurrences are now being re-evaluated. Nickel is mined near Hope in British Columbia and tungsten is recovered from a deposit in the Northwest Territories adjacent to the Yukon Territory. High-grade, long-fibre asbestos is extracted from a peridotite body at Cassiar in northern British Columbia.

Coal beds in Lower and Upper Cretaceous and Tertiary sedimentary basins are found in many locations throughout the Cordillera. Past production was much greater than at present but the possibility of increased demand for coal may reactivate several mines. The main producing areas include Comox on Vancouver Island, Crowsnest coalfield in southwest British Columbia and Alberta, and Luscar in the Alberta foothills.

Although most of the oil and gas fields of Alberta and British Columbia are east of the Cordillera in the Interior Plains of Alberta, several large fields are found in the foothills. The important Turner Valley field, which was discovered in 1913 and has produced since 1936, contains large oil and gas reserves in a faulted anticline in Mississippian strata. Oil is found in Devonian reef limestone at Norman Wells in the Northwest Territories. Sulphur is an important by-product of many fields containing natural gas.

**Innuitian Region.**—North of the Arctic Plains and Plateaux, where Palæozoic limestones rest on Precambrian generally-stable crystalline rocks, deep crustal depressions were initiated in late Proterozoic time and received thick deposits of carbonates and shales (miogeosynclinal type) and, in northern Ellesmere Island, volcanics and greywackes (eugeosynclinal type). In the southern basins, Proterozoic sediments are mainly carbonates and coarse to fine clastic sediments. Overlying these conformably are thick layers of lower Palæozoic carbonates which are thicker and include more abundant dark shales to the north. Middle Ordovician gypsum beds extend in places across the southern basins. Carbonates are admixed with muds and sands in parts of the Upper Silurian to Middle Devonian beds, and the influx of these clastic materials probably reflects relatively minor orogenies and periodic uplifts such as the Boothia Arch in the region. Folding of the eugeosynclinal volcanics of northern Ellesmere Island produced land areas from which sands were swept southward to form Upper Devonian non-marine sandstones in the miogeosynclinal basins. The total assemblage of sediments is more than 35,000 feet thick in some districts. The dominant folding of the Franklinian geosyncline, called the Ellesmerian orogeny, occurred near the close of Upper Devonian time. With the exception of the Cornwallis fold belt discussed below, the resulting folds of the Innuitian Region trend southwesterly from northern Ellesmere Island and swing westerly through the Parry Islands. The Cornwallis fold belt interrupts this trend at right angles because it lies along a buried north-trending prong of Precambrian rocks, which extend from exposures of the Boothia Peninsula. This elongate Precambrian basement rose periodically at least six times to produce north-trending faults and folds in the overlying Palæozoic beds of the Cornwallis fold belt, whereas the Franklinian geosyncline was deformed by somewhat younger and more widespread compressional crustal forces.

Following the Ellesmerian orogeny, a vast area including the present Sverdrup Islands and much of western Ellesmere Island was depressed to form the site of deposition of a composite thickness of 60,000 feet of Pennsylvanian to Tertiary volcanics, shales, sandstones, some gypsum and, in the upper part, a thick assemblage of non-marine clastic sediments. The rocks of this Sverdrup Basin were deformed about the end of the Mesozoic Era by the Laramide orogeny. Late Palæozoic gypsum beds, which tend to flow under high pressure, were forced upward to intrude overlying Mesozoic beds. Gypsum diapiric domes later penetrated Tertiary beds. No salt or potash-bearing minerals are as yet known to be associated with the gypsum, although a few minor occurrences of native sulphur have been found. A zinc-lead deposit being evaluated in limestone or dolomite on Little Cornwallis Island is unique in Canada, because much of the zinc occurs as the carbonate smithsonite, rather than sphalerite, the usual sulphide. Coal is widely distributed in the Innuitian Region, particularly in Upper Devonian beds of the Franklin miogeosyncline and in three formations within the Sverdrup Basin. As in the case of the

Arctic Lowlands and Plateaux, geological conditions are favourable for commercial petroleum accumulation but serious exploration guided by known regional geology has only recently begun in this vast area. Lead and zinc deposits in dolomitic, reefoid limestones might be expected on geological grounds. Regions in which reefoid dolomites lie near boundaries of calcareous rocks where they change to dark shales of the same age might be most favourable, according to some genetic hypotheses. Massive, pyritic base-metal sulphide deposits would probably be most likely to lie within volcanics in the northern, eugeosynclinal belt of the Franklinian geosyncline.

**Arctic Lowlands and Plateaux.**—These geological and physiographic divisions lie in large basins separated by arches and belts of exposed Precambrian crystalline rocks. Gently inclined or flat sediments underlying the basins tend to be thin sandstones and limestones near the basal contact with metamorphosed Precambrian rocks but limestones and dolomites of Middle Ordovician to Early Devonian age are the principal rock types and at some localities are estimated to be up to 18,000 feet thick. Shales, sandstones and restricted areas of conglomerates of Middle Devonian to Late Devonian age are normally the youngest rocks preserved.

Reefoid, vuggy dolomites of Middle Ordovician to Middle Silurian age commonly contain bituminous residues in surface exposures, structural and stratigraphic traps are probably present, and thick sections of potential source beds of petroleum and gas are known. Active oil seepages have not been reported. Petroleum exploration, aided by prior geological knowledge and published maps, began during the mid-1950s.

Beds of gypsum admixed with some shale up to 970 feet thick are exposed in many localities in Middle Ordovician beds. If more soluble evaporite minerals such as rock salt and potash-bearing minerals had been formed with gypsum, they would be leached from surface outcrops, but could be disclosed in future drilling. Piercement domes of gypsum, locally with occurrences of native sulphur, are found in the Sverdrup Basin. Coal is rare here, although abundant in the Innuitian Region.

**Arctic Coastal Plain.**—This plain comprises late Tertiary or Pleistocene sand and gravels, which dip gently seaward along the northern exposed border of the Innuitian Region. The very young beds cover the extensions of eroded fold belts and the Sverdrup Basin. Although of minor land extent, they or their equivalents probably extend far out on the Arctic continental shelf.

**The Interior Plains.**—The Interior Plains are underlain by undisturbed or gently flexed or tilted sedimentary strata, which overlap the western border of the Canadian Shield and merge with the eastern foothills of the Cordilleran region. The Shield slopes at a rate of 15 feet per mile under the Great Plains, in the western part of which the overlying strata reach a thickness of 10,000 feet. The older overlying beds have been bevelled by erosion along the border of the Shield, exposing in central Manitoba marine beds of limestone, sandstone and shale of Ordovician, Silurian and Devonian ages. Farther north the exposed Palæozoic strata are mainly Devonian. The Palæozoic formations are overlain by early Mesozoic strata of marine origin and these by both marine and freshwater Cretaceous formations, which are the uppermost strata in much of Saskatchewan and Alberta. In places, however, as at Turtle Mountain in Manitoba and the Cypress Hills in Saskatchewan, these are overlain by remnants of early Tertiary formations.

The rich soils of the Great Plains, particularly in the Manitoba Plain, were derived from the weathering of the underlying strata and the unconsolidated deposits resulting from glaciation. Most of Canada's oil and gas is produced from Palæozoic and Mesozoic strata underlying the Great Plains, mainly in Alberta but also in Saskatchewan, Manitoba and northeastern British Columbia. The productive beds range from Devonian to Cretaceous in age, the reservoir rocks being largely reefs containing openings, although "stratigraphic" traps such as lenses of porous sediments overlain by non-porous ones are also important. Exploration for oil and gas has recently been extended through most of

the plains including those in the Arctic Archipelago. The Athabasca oil sands, extending for more than 100 miles along the Athabasca River in northern Alberta, are accumulations of heavy oil and sand of Early Cretaceous age. The total amount of oil in these sands is estimated at 100,000,000 to 300,000,000,000 barrels, more than all other known reserves of the world. Present and potential production of potash in southern Saskatchewan represents a major source in terms of world supply. These Middle Devonian evaporites are estimated to contain more than 100,000,000,000 tons of potash. Coal is being or has been produced from many places in the Great Plains, which also yield salt, gypsum, limestone and other non-metalliferous products. Important deposits of zinc and lead are being mined in Devonian limestone at Pine Point, Great Slave Lake.

**St. Lawrence and Hudson Bay Lowlands.**—The St. Lawrence Lowlands are underlain by marine beds deposited during much of Palæozoic time. Rather similar late Ordovician to Devonian beds are exposed in the Hudson Bay Lowlands. Small areas of Palæozoic beds are preserved at various localities on the Canadian Shield between these two Lowlands and suggest that arms or shallow straits of Palæozoic seas may have connected the present Hudson Bay and the St. Lawrence Lowland areas. The St. Lawrence Lowlands from Quebec City to Windsor are occupied by about one half the population of Canada, supported by much arable land and major industrial concentrations. These Lowlands are divided by an exposed southeasterly-trending prong of the Canadian Shield called the Frontenac Axis, which extends into the United States northeast of Lake Ontario. Southwest of the Frontenac Axis, marine sedimentary rocks of Cambrian to Mississippian age rest on buried Precambrian rocks. Known formations there have an aggregate thickness of almost 6,000 feet. Rocks are mainly limestones, shales and sandstones deposited in generally shallow seas. During Silurian time, evaporation exceeded saltwater inflow in some areas and the salt and gypsum beds within the Salina Formation were deposited. In part because of their position near industrial centres, roughly 80 p.c. of the salt produced in Canada is recovered by evaporation of brines and from two mines adjacent to the southeastern shore of Lake Huron. Gypsum is also mined from the Salina Formation. Petroleum has been produced continuously since 1859, mainly from Devonian beds, and natural gas has been produced since 1889, mainly from Silurian beds. Fluorite was at one time produced in moderate tonnages from veins in Ordovician limestone near Madoc in Ontario.

Northeast from the Frontenac Axis to Quebec City, only lower Palæozoic beds are present. Cambrian sandstone and thick beds of Ordovician limestone and shale attain thicknesses of up to 10,000 feet. Showings of petroleum and natural gas are known in some of the 185 exploratory wells drilled but no production has been attained. Sandstones of high silica content are quarried near Montreal, Quebec. Because of the population and industrial concentration in both the above sections of the St. Lawrence Lowlands, large amounts of limestone, shale and sandstone are quarried for structural materials, cement production and chemical needs. Such products have a low unit value and can be profitably extracted only within low-cost reach of their consumption points.

Anticosti Island is an isolated, northeastern division of the St. Lawrence Lowlands. Exploratory drilling for petroleum shows a thickness of up to 6,146 feet of Silurian and older Palæozoic sediments underlying the island, with Precambrian crystalline rocks at greater depths. Showings of oil and gas in one of five holes were not considered of commercial value.

The Hudson Bay Lowlands are underlain by flat-lying Ordovician to Devonian beds and Upper Cretaceous lignite, sand and fire clay. The beds attain a variable thickness of at least 1,536 feet in southern James Bay. Post-Precambrian beds near the centre of Hudson Bay are indicated by a seismic survey made by the Geological Survey of Canada to be up to 5,905 feet thick. Deposits of gypsum and lignite are known but not exploited.

### Surficial Deposits

The continental glaciation of most of Canada has removed weathered bedrock and residual soils and has almost certainly removed some types of ores such as pre-Pleistocene placer gold deposits, laterites, and upper portions of metallic and manganiferous ore deposits, which had formerly been enriched under stable near-surface conditions. Material deposited includes dominantly clastic detritus such as tills, esker gravels, outwash gravels and sands, or rock flour deposited in lakes or shallow seas in the form of multiple layers of varved clay or massive clay beds. Maps showing the surface distribution of these materials are published by federal agencies and reflect some physiographic features and present and potential land use.

Much of Canada's bedrock surface and ore deposits are covered by such glacially derived surficial deposits. Gravel, sands and clays are extensively used in industrial regions and for earth dam construction, and coarse materials are used for road-building. Other beds or ancient river channels comprising gravels and coarse sands constitute important sources of groundwater. The nature and mechanical properties of glacial deposits must be well known for foundation design of large buildings, for dam design and for other engineering projects. Orebodies now covered by glacial material contributed blocks or grains of ore to the detritus during glaciation. Such blocks or heavy mineral grains can be found and in some cases traced back to their point of origin if the direction(s) of glacial transport can be deduced and if the history of transport is not too complex. Groundwaters circulating through ore and overlying surficial material may transfer metals in solution and enrich the nearby surface soil or stream sediments. Because so much of Canada's bedrock area is screened by surficial deposits, geochemical surveys to detect surface geochemical anomalies have been the initial clue to the discovery of some of its ore deposits. Other anomalies are known to be derived from non-economic mineralization or, where the path followed by groundwater from ore to surface is complex, the source of some surface anomalies remains unknown. Federal and some provincial geologists conduct regional geochemical surveys and supporting research, and mineral exploration companies make extensive and more detailed use of the geochemical prospecting methods.

### Geophysics in Canada

Canadian scientists have played a major role in the development and application of airborne and ground geophysical instruments and techniques to probe below the surface of the land, the lakes and continental shelves. Regional surveys of variations in the earth's magnetic field are conducted with the use of aircraft by federal and joint federal-provincial agencies and results are published as aeromagnetic maps. Federal scientists have probed the Palaeozoic beds and the surface of their buried basement in Hudson Bay and parts of the continental shelf by seismic methods; they make accurate measurements of the force of gravity at a network of Canadian stations, and record earth tremors and calculate their points of origin. Oil companies commonly conduct seismic and geological studies over large areas as the principal means of selecting promising drill sites. Mineral exploration companies normally select a district which they consider geologically favourable, carry out combined airborne electromagnetic and magnetometer surveys and then survey anomalous localities on the ground with more detailed electromagnetic, magnetic and/or gravity surveys. After geological examination and geochemical studies, these combined data allow selection of initial drill sites where drilling still seems warranted.

Aeromagnetic surveys measure variations in the earth's magnetic field caused by near-surface differences in the magnetic properties of bedrock and to a lesser extent by deeper bedrock features. These surveys have been vigorously conducted and have yielded

aeromagnetic maps of 38 p.c. of Canada's land surface as well as parts of the continental shelves off Nova Scotia and Hudson Bay and other Arctic waters. On regional scales, these maps materially aid in preparing geological maps, particularly in areas of extensive surficial cover, and aid mineral exploration by indicating the trends of rock units selected as being potentially favourable. One of the earliest of the aeromagnetic surveys in 1949 by the Geological Survey of Canada clearly pin-pointed and led to the discovery by an exploration company of the present Marmoraton iron mine, although the ore was completely covered by about 125 feet of flat-lying limestone. The compilation and reduction in scale of many individual aeromagnetic maps, as in the accompanying illustration, shows major structural trends in the Canadian Shield over an area of 71,000 square miles. The heavy northeast-trending line marks the boundary between the Superior province on the southeast and the Churchill province on the northwest. Northeast of the dotted line on the map, the Precambrian rocks are completely covered by flat-lying limestones of the Hudson Bay Lowlands, yet the structural trends in the basement rocks were readily detected.

Regional sea-seismic and aeromagnetic surveys of parts of the Atlantic and Arctic continental shelves are completed and in progress in order to evaluate the deeply buried sequences and structures below these relatively shallow waters and to prepare for more detailed company exploration for off-shore oil and gas.

Electromagnetic methods are principally used by exploration companies to detect buried bodies of anomalous electrical conductivity with respect to normal bedrock. Most conductors so detected prove to be caused by graphitic or barren pyritic zones and are of no commercial value, but a small proportion prove to be orebodies such as a single remarkable discovery, announced in 1964, near Timmins in Ontario.\* Prior to drilling, it is commonly not possible to distinguish details of the conductor. Current research in the Geological Survey of Canada is in part directed toward the use of magnetotelluric currents in the detection of buried sulphide deposits but more effort is expended in applying electromagnetic methods to the study of the stratigraphy and nature of unconsolidated sands, gravels, clay and till. These studies, combined with shallow seismic surveys, have been particularly rewarding in defining buried river channels that contain abundant groundwater.

Seismic surveys to depths of about 180 feet are readily made by sending shock waves into the ground from a sledge-hammer blow and recording their reflections. The detection of groundwater reserves, or surficial aquifers, both in surficial material and bedrock, is one application of the method, as discussed above; or depths to bedrock for heavy construction or mineral exploration problems may be determined at relatively low cost. Penetration deep below the surface is effected by detonating explosive charges on land or sea, and recording the reflections of waves from deeply buried, folded or flat-lying strata, or detection of variations, such as oil-bearing reefs, within strata. The Geological Survey of Canada recently defined the thickness of potential oil-bearing strata beneath the waters of Hudson Bay by this method.

Research continues in other new methods of rapidly detecting potentially useful physical variations at and near the earth's surface. Airborne infra-red imagery, for example, discloses slight variations in apparent surface temperature. Several applications are being investigated such as detection of cold groundwaters or hot springs discharging into lakes or rivers, detection of discharge points of warm industrial waste waters, or possibly slightly warmer land surfaces which might be related to sources of geothermal power or some types of ore deposits. The geiger counter and scintillometer continue to

\* This deposit was found by astute geological selection of a large area followed by airborne and ground geophysical surveys and, finally, drilling. No significant massive sulphide deposits of this type had formerly been known in this long-established gold-mining district.

greatly aid prospecting for uranium. More sophisticated gamma ray spectrometers are now being developed to give quantitative field determinations of the uranium, thorium and potassium content of rocks.

The foregoing are only brief sketches of the subjects covered. Further condensed information is supplied by *Geology and Economic Minerals of Canada* (including Map 1045A) and *Prospecting in Canada*; the latter also contains chapters on the principles of geology and on minerals and rocks. *The Geological Map of Canada* (1045A, 50 cents) and *Canada, Principal Mining Area* (900A) are also recommended. Map 900A is revised annually; one copy is sent free to residents of Canada and additional copies are 25 cents each. These publications can be ordered from the Director, Geological Survey of Canada, Ottawa, together with lists of reports and maps of the Geological Survey of Canada on specific topics and areas, for each province. Other publications are available from provincial mines departments.

### Section 3.—Federal Government Surveying and Mapping\*

The needs for maps and surveys of Canada are met mainly by the Department of Energy, Mines and Resources. Although not all Branches of this Department make surveys and compile maps, many of them are involved in such work either wholly or partly. They compile topographical, geological and aeromagnetic maps, aeronautical and hydrographic charts, as well as specialized maps showing electoral district boundaries, land use and other features. In carrying out these tasks, the Department is guided partly by long-range plans based on general national needs and partly by requests from private enterprise and other government agencies. Some types of maps and surveys are also produced by provincial and private agencies and, to avoid duplication, the Department co-ordinates its work with these bodies. Other types—such as hydrographic and aeronautical charts—are produced exclusively by the Department.

The staff of the Department numbers about 4,000, of whom 1,000 are scientists and engineers and 1,300 are technicians. Each year, some 1,500 men are sent into the field to make surveys and to carry out research. Of the various Branches and Divisions, the following are particularly concerned with surveying and mapping: Surveys and Mapping Branch (geodetic and topographic surveys, electoral maps, aeronautical charts); Marine Sciences Branch (hydrographic charts of seacoasts and inland navigable waters); Geological Survey of Canada (geological features); Observatories Branch (geophysical maps); and Geographical Branch (land-use, land-form and other special maps).

**Types of Surveys.**—In the field of geodesy, the Geodetic Survey maintains and extends a network of horizontal and vertical control points across Canada. At present, most of the extension work is in the northern parts of the country, while in the south greater density and the closing of gaps are the main tasks. The ultimate aim is to have horizontal and vertical control points no farther apart than 20 miles. The Topographical Survey is proceeding with the establishment of control points at smaller intervals and the mapping of the country at the most popular scales—1:25,000, 1:50,000 and 1:250,000. Complete coverage of Canada at 1:250,000, or about four miles to the inch, is expected by 1967; of the 925 maps required for this purpose, more than 800 were completed by early 1966. Of particular interest in both geodetic and topographical surveying is the establishment of monumented control points in and around municipalities, a long-neglected and urgently needed task.

The Department also carries out legal or property surveys on Crown lands, such as the two northern Territories, the National Parks and Indian reserves; it participates in the

\* Prepared by H. G. Classen, Special Projects Section, Editorial and Information Division, Department of Energy, Mines and Resources, Ottawa.

survey and demarcation of interprovincial and territorial boundaries; is responsible for the preparation of descriptions and diagrams of federal electoral districts; and is the sole agency in Canada for the preparation of aeronautical charts showing airports, airways, and radio and other aids necessary for air navigation. Much of the work in the latter type of mapping arises from the need to keep up with the flow of new aeronautical information and to present it in a form that may be easily interpreted by the pilot. As a service to map-makers and others interested in that field, the Department maintains the National Air Photo Library, a collection of all air photographs taken by or for the Federal Government.

Hydrographic and oceanographic surveys are carried out from the Department's fleet of ships and launches in the seas bordering Canada and in inland lakes and rivers. The Bedford Institute of Oceanography at Dartmouth, N.S., is the base for operations on the Atlantic Coast and in the Eastern Arctic, and the Pacific base is at Victoria, B.C. The final compilation of the marine charts is done at Ottawa.

Geological surveys are carried out mainly to provide an inventory of the potential mineral resources of Canada, to aid in the discovery of mineral deposits, and to help in other aspects of the national economy influenced by geological factors. Each year approximately 100 parties are placed in the field, about half of whom are engaged in reconnaissance mapping. The first systematic reconnaissance of the geology of Canada is approaching completion and attention is being increasingly given to more fundamental research. Both the Geological Survey and the Observatories Branch carry out geophysical surveys, resulting in maps showing such features as variations in terrestrial magnetism, gravity and seismicity. The geophysicists of the Geological Survey are interested mainly in outlining geological features and those of the Observatories aim at a better over-all knowledge of the earth. A network of 22 first-order seismic stations is maintained across Canada and earthquake-probability maps are published.

The Geographical Branch produces special maps showing actual land use—an important aid in economic planning; it surveys and maps land forms in the Arctic, where ice formation produces surface dislocations found in few other areas; and also acts as the executive arm of the Canadian Permanent Committee on Geographical Names.

In the drafting and printing of the maps, highly advanced techniques for the automatic transfer of terrain features from air photos to drafting sheets and precise lithographing have been combined to assure speedy processing of field data and the production of colourful, easily understood and relatively inexpensive maps for every type of user, from vacationer to town planner and from prospector to pilot. The Department operates a large modern plant to print the maps compiled by its several Branches as well as maps compiled by other government departments and agencies. The Surveys and Mapping Branch has a stock of almost 12,000,000 maps from which it distributes more than 1,000,000 annually. Each year the Geological Survey distributes about 350,000 maps and reports, the Marine Sciences Branch distributes about 250,000 charts, and other Branches distribute large numbers of their own maps and charts.

## PART II.—PUBLIC LANDS, WILDLIFE AND FLORA\*

### Section 1.—Federal and Provincial Public Lands

In Table 1 classifying the area of Canada by tenure, items 2, 3, 4 and 5 are obtained from Federal Government sources and items 1, 6, 7 and 8 from provincial government sources.

\* No information on the flora of Canada is given in this publication but the reader is referred to a detailed special article on the subject, prepared by Dr. Homer J. Scoggan of the National Museum of Canada, which appears in the 1966 Year Book at pp. 35-61.

<sup>1</sup> Includes Gatineau Park (97 sq. miles) and Quebec Battlefields Park (0.36 sq. mile) which are under federal jurisdiction but are not technically National Parks. <sup>2</sup> Less than one square mile. <sup>3</sup> Sect. 46 of the Crown Timber Act which authorized Provincial Forest Reserves was repealed Mar. 25, 1964; all such lands are included in item 6. <sup>4</sup> Includes 952,849 sq. miles set aside by Order in Council as native game preserves in which only Indians and Eskimos may hunt, but which are not regarded as National Parks. <sup>5</sup> Includes that part of Wood Buffalo Park in Alberta (13,675 sq. miles); this park, although established under the National Parks Act, is administered by the Department of Indian Affairs and Northern Development. <sup>6</sup> That part of Wood Buffalo Park in N.W.T. <sup>7</sup> This forest experiment area of 25 sq. miles is also included in National Parks figure. <sup>8</sup> Includes 1,945 sq. miles of provincial park land within provincial forest reserves. <sup>9</sup> Does not add because of duplications; see footnotes concerned.

**Federal Public Lands.**—Public lands under the administration of the Federal Government comprise lands in the Northwest Territories including the Arctic Archipelago and the islands in Hudson Strait, Hudson Bay and James Bay, lands in Yukon Territory, ordnance and admiralty lands, National Parks and National Historic Parks and Sites, forest experiment stations, experimental farms, Indian reserves and, in general, all public lands held by the several departments of the Federal Government for various purposes connected with federal administration (see Table 1). These lands are administered under

the Territorial Lands Act (RSC 1952, c. 263) and the Public Lands Grants Act (RSC 1952, c. 224) which became effective June 1, 1950 and replaced previous legislation.

The largest areas under federal jurisdiction are in the Northwest Territories and Yukon Territory where only 85 sq. miles of a total area of 1,511,979 sq. miles are privately owned. This part of the national domain, with the exception of the islands in Hudson Bay and James Bay, is all north of the 60th parallel of latitude and occupies about 40 p.c. of the surface of Canada. It is under the administration of the Department of Indian Affairs and Northern Development.

**Provincial Public Lands.**—Public lands of Nova Scotia, New Brunswick, Quebec, Ontario and British Columbia (except the Railway Belt and Peace River Block) have been administered since Confederation by the provincial governments. In 1930 the Federal Government transferred the unalienated portions of the natural resources of Manitoba, Saskatchewan and Alberta and of sections of British Columbia to the respective governments, and all unalienated lands in the Province of Newfoundland, except those administered by the Federal Government, became provincial public lands under the Terms of Union on Mar. 31, 1949. All land in the Province of Prince Edward Island has been alienated except 130 sq. miles under federal or provincial administration.

Information regarding provincial public lands may be obtained from the respective provinces. (See the Directory of Sources of Official Information, Chapter XXVII, under "Lands and Land Settlement".)

### Subsection 1.—National Parks

Canada's National Parks are the result of the Federal Government's efforts to preserve natural areas of outstanding scenic and biological interest for the benefit of the public. The national park concept, which began with the establishment of Yellowstone National Park in the United States in 1872, was soon afterwards applied in Canada. In 1885, the Canadian Government reserved from private ownership the hot mineral springs of Sulphur Mountain in what is now Banff National Park. Two years later, this 10-sq. mile reserve was extended to 200 sq. miles and named Rocky Mountain Park, the first federal park in Canada. In the same year, Queen Victoria Niagara Falls Park, the first provincial park, was established by the Ontario Government to protect the public's right to view the great natural wonder of Niagara Falls. Two land reserves in southern British Columbia—Yoho and Glacier—were established by the Federal Government in 1886, a reserve in the Waterton Lakes area of southern Alberta in 1895, and an area of 4,200 sq. miles around Jasper, Alberta, in 1907. These four reserves, all in the western mountain ranges, joined Banff as the nucleus of the National Park system when the Dominion Forest Reserves and Parks Act was passed by Parliament in 1911. The Act also provided for a distinct National Parks Branch in the Federal Government to protect, administer and develop the parks.

By 1935, nine more National Parks had been established. Three of these were in Ontario and consisted of federally owned Crown land; one in Saskatchewan and one in Manitoba were former forest reserves; Wood Buffalo National Park, straddling the Alberta-Northwest Territories border and occupying an area of 17,300 sq. miles, making it the largest national park in the world, was established as a refuge for the largest surviving herd of buffalo in North America; Elk Island National Park near Edmonton was also established as a preserve for buffalo; and Mount Revelstoke and Kootenay National Parks, scenic areas in southern British Columbia, were established by agreement between the Federal and British Columbia Governments.

The parks added to the system since 1935 were set up with the co-operation of provincial governments which made lands available for National Park purposes. All lands suitable for National Parks are now under the administration of provincial and territorial

governments and a new National Park may be established by Act of Parliament only after the land for it has been acquired by the provincial government and transferred, together with all its mineral and other resource rights, to the administration of the Federal Government.

National Parks are now under the jurisdiction of the Minister of Indian Affairs and Northern Development and the Natural and Historic Resources Branch and are administered under the National Parks Act enacted in 1930 (RSC 1952, c. 189) and various park regulations. The purpose of the parks and the objectives of their management are set out in that Act, which dedicates the parks to the people of Canada for their "benefit, education and enjoyment" and instructs that they are to be maintained and used so as to leave them unimpaired for the enjoyment of future generations.

An important step in the evolution of National Park administration was taken when all policies regarding the parks were reviewed and consolidated in a statement that was approved by the Government and announced in the House of Commons on Sept. 18, 1964. The main points of this policy statement, which will guide administration and provide objectives for planning and development, are:—

- (1) National Parks are established to preserve for all time the most outstanding and unique natural features of Canada for the benefit, education and enjoyment of Canadians as part of their natural heritage. They are dedicated forever to one use—to serve as sanctuaries of nature for rest, relaxation and enjoyment. No exploitation of resources for any other purpose is permitted. All development must contribute to public enjoyment and conservation of the parks in a natural condition.
- (2) Zoning will be used to guide development and to preserve park values. Visitor services will be grouped generally to visitor service centres, a definition that applies to existing townsites.
- (3) National Parks cannot meet every recreational need; the most appropriate uses are those involving enjoyment of nature and activities and experiences related to the natural scene.
- (4) The Federal Government assumes the cost of administration and protection in the parks and provides basic facilities for public use, such as roads, trails, campgrounds, picnic areas, nature interpretation and utilities. Other facilities beyond basic requirements, such as hotels, motels, restaurants, gas stations, stores and other special services, are provided by private enterprise.
- (5) Park residents and businesses should be in the same economic position as those operating outside the National Parks and this principle governs the approach to charges, rentals and fees. The users of special services such as swimming pools, marinas, golf courses and fully serviced campgrounds should pay the operation and maintenance costs of these publicly operated facilities. In general, permanent and seasonal residents should be limited to persons providing basic services to park visitors and to the park community.
- (6) All decisions affecting public development and the activities of private enterprise must be governed by the national interest as expressed by the National Parks Act.

In addition to the National Parks, which preserve natural features, National Historic Parks and Sites preserve and identify the places important in the history of Canada. The National Historic Parks are military or fur-trading forts that have been preserved, or historic buildings or reconstructions of historic buildings and most of them have museums associated with them. Hundreds of monuments or plaques commemorating personages or events have been erected across the country. A site is declared of national historical significance on the recommendation of the Historic Sites and Monuments Board of Canada, an advisory board of historians representing all provinces.

The National Parks and National Historic Parks and Sites are administered by a director and three regional directors who are responsible for operations in the Western Region, the Central Region (Ontario and Quebec) and the Atlantic Region. Each director is advised by representatives of the five staff divisions of the Branch—Financial and Management, National Parks Service, Canadian Historic Sites, Engineering and Architectural, and Planning. A resident superintendent manages each park and directs a staff of park wardens who protect the park and its natural features and enforce park regulations, park naturalists who explain the park to visitors and offer various educational services, and other administrative, maintenance and visitor service personnel.

Each park is being developed to yield the recreational potential for which it is suited and sightseeing, camping, fishing, photography, hiking and nature study are the most popular recreations common to the 18 parks that are accessible to the public. There are campgrounds in each park; a daily charge is made for the use of those equipped with complete services but there is no charge for the use of other campgrounds. A vehicle admission fee, varying from 25 cents for a single entry to \$2 for an annual licence good for all parks, is payable on entering all parks in Western Canada and Point Pelee National Park in Ontario; there is no charge for motor vehicles entering parks in the Atlantic Provinces.

## 2.—Location, Year Established, Area and Characteristics of National Parks and of National Historic Parks and Sites

Park	Location	Year Estab- lished	Area  sq. miles	Characteristics
<b>National Parks</b>				
Terra Nova.....	On Bonavista Bay, Newfoundland, 205 miles north of St. John's.	1957	153.0	Rocky headlands, wooded interior areas, off-shore and freshwater fishing. Serviced campground and cabin accommodation.
Prince Edward Island..	North shore of Prince Edward Island.	1937	7.0	Strip 25 miles long on shores of the Gulf of St. Lawrence. Fine bathing beaches. Hotel and cabin accommodation. Serviced campgrounds.
Cape Breton Highlands.	Northern part of Cape Breton Island, N.S.	1936	367.0	Rugged Atlantic coastline with mountainous background. Fine seascapes. Hotel and cabin accommodation. Serviced campgrounds.
Kejimikujik.....	Interior of southwestern Nova Scotia near Maitland Bridge.	<sup>1</sup>	150.0	Newest National Park still at early stage of development.
Fundy.....	On Bay of Fundy between Moncton and Saint John in New Brunswick.	1948	79.5	Interesting rock formations on coast and rolling hills inland. Motel and cabin accommodation and campgrounds.
Georgian Bay Islands..	In Georgian Bay, 3 miles by water from Honey Harbour, Ont.	1929	5.4	Camping, canoeing, hiking, swimming, fishing and boating opportunities. Unusual geological formations on Flowerpot Island, off Tobermory on Midland Peninsula. Accessible by boat only.
Point Pelee.....	On Lake Erie near Leamington, in southwestern Ontario.	1918	6.0	Most southerly part of Canadian mainland. Fine bathing beaches. Unusual flora. Resting place for migrating birds. Campground.
St. Lawrence Islands...	In St. Lawrence River between Brockville and Kingston, Ont.	1914	260.0 (acres)	Mainland area and 14 islands with docks, campgrounds and picnic areas. Representative selection of the Thousand Islands. Islands accessible by boat only.
Riding Mountain.....	Southwestern Manitoba, west of Lake Winnipeg.	1929	1,148.0	Woodland escarpment with fine lakes. Fishing, swimming, trail-riding, hiking and golfing. Visitor services in Wasagaming townsite. Campgrounds.
Prince Albert.....	Central Saskatchewan, north of Prince Albert.	1927	1,496.0	Forested region dotted with lakes and interlaced with streams. Fishing, swimming, boating and golfing. Marina. Visitor services at Waskesiu townsite.
Banff.....	Western Alberta, on east slope of Rockies, 65 miles from Calgary.	1885	2,564.0	Best known and most popular of the National Parks. Magnificent scenery. Mineral hot springs. Resort facilities at Banff and Lake Louise. Skiing developments at Mount Norquay, Mount Whitehorn, Sunshine, Skoki and Temple. On Trans-Canada Highway.

<sup>1</sup> Not yet formally established.

## 2.—Location, Year Established, Area and Characteristics of National Parks and of National Historic Parks and Sites—continued

Park	Location	Year Estab- lished	Area	Characteristics
			sq. miles	
<b>National Parks— concluded</b>				
Elk Island.....	Central Alberta, near Ed- monton.	1913	75.0	Fenced preserve containing large herd of buffalo; also deer, elk and moose. Popu- lar picnic and day-use area. Cabin accommodation and serviced camp- ground.
Jasper.....	Western Alberta, on east slope of Rockies, 235 miles from Edmonton.	1907	4,200.0	Mountainous area and noted wildlife sanc- tuary. Majestic peaks, icefields, beau- tiful lakes and famous resort, Jasper. Mineral hot springs. Connected with Banff by scenic Banff-Jasper Highway. Accessible also by rail. Hotel and cabin accommodation and campgrounds.
Waterton Lakes.....	Southern Alberta, adjoining Glacier Park in Mon- tana, U.S.A.	1895	203.0	Canadian section, Waterton-Glacier Inter- national Peace Park. Mountainous area with spectacular parks and beautiful lakes. Hotel, motel and cabin accom- modation. Serviced and unserviced campgrounds.
Glacier.....	Southeastern British Col- umbia, on summit of the Selkirk Range.	1886	521.0	Superb alpine region, towering peaks, glaciers and forests. Climbing, hiking and camping. On Trans-Canada High- way. Visitor services at Rogers Pass.
Kootenay.....	Southeastern British Col- umbia, on west slope of Rockies.	1920	543.0	Includes Vermilion-Sinclair section of Banff-Windermere Highway. Broad valleys, deep canyons, mineral hot springs. Hotel and cabin accommo- dation. Serviced and unserviced camp- grounds.
Mount Revelstoke.....	Southeastern British Col- umbia, on west slope of Selkirks.	1914	100.0	Mountain-top plateau with rolling alpine meadow and picturesque tarns.
Yoho.....	Eastern British Columbia, on west slope of Rockies.	1886	507.0	Lofty peaks, magnificent waterfalls, colour- ful lakes. Yoho and Kicking Horse Valleys. Hotel and cabin accommo- dation. Serviced and unserviced camp- grounds.
Wood Buffalo.....	Partly in Alberta, and partly in Northwest Ter- ritories, between Atha- basca and Slave Rivers.	1922	17,300.0	Largest National Park in world. Home of largest remaining herds of plains and wood bison and nesting ground of whoop- ing crane. Accommodation at and access by boat and aircraft from Fort Smith, N.W.T.
<b>National Historic Parks</b>			acres	
Signal Hill.....	St. John's, Nfld.....	1958	243.4	Site of 1762 battle between French and British and of many fortifications. Marconi made first transatlantic wireless transmission here in 1901.
Fort Amherst.....	Prince Edward Island, near Rocky Point.	<sup>1</sup>	222.0	Remaining earthworks of British fort built after 1758.
Fort Anne.....	Annapolis Royal, N.S.....	1917	31.0	Site of French fort first built about 1635, finally captured and occupied by British in 1710. Museum and well-preserved earthworks.
Fortress of Louisbourg.	Cape Breton Island, N.S., 25 miles from Sydney.	1940	13,000.0	Walled town built by French 1713-58 and demolished by British 1759. Being par- tially reconstructed. Archaeological in- vestigations in progress.

<sup>1</sup> Not yet formally established.

### Subsection 2.—Provincial Parks

Most of the provincial governments of Canada have established parks within their boundaries. Some of these, particularly in Quebec and Ontario, are wilderness areas set aside in order that some portions of the country might be retained in their natural state without change brought about by the hand of man. Most of them, however, are smaller areas of exceptional scenic or other interest which are easily accessible and are equipped or slated for future development as recreational parks with camping and picnic facilities. The more important parks in each province are mentioned briefly in the following paragraphs.

**Newfoundland.**—There are 78.5 sq. miles of provincial parkland reservations in Newfoundland. Of the total area, 26 sq. miles are at present utilized for public recreation and the remaining 52.5 sq. miles are as yet undeveloped. The active parkland consists of three regional parks, each having an area of about 8 sq. miles, and 18 roadside parks with camping and picnicking facilities, each having an area of about 100 acres.

In early 1966 arrangements were made under the federal Agricultural and Rural Development Act (ARDA) program to establish 12 more provincial parks in Newfoundland within the next two years. The parks will be located in various sections of the province and each will contain 25 camping areas, 25 picnic areas and swimming facilities, with associated roads, trails, clearings and bridges as required.

**Prince Edward Island.**—Twenty areas totalling 900 acres have been developed as provincial parks: Strathgartney Park, a 40-acre tract of land at Churchill on the Trans-Canada Highway between Charlottetown and Borden, is an excellent picnic site and

camping ground with its hardwood groves, fresh spring water and beautiful view over West River and the surrounding country; Lord Selkirk Park, an area of 30 acres at Eldon, is of historic interest in that it contains an old French cemetery and marks the spot on the shoreline where Lord Selkirk landed; Brudenell River Park, comprising 80 acres at Roseneath, has a considerable area of woodland and runs to the shore of the Brudenell River; Jacques Cartier Park, an area of 13 acres at Kildare Beach four miles from Alberton, is of historic significance as the place where Jacques Cartier first landed on Prince Edward Island; Green Park, 27 acres on the Trout River, is an attractive combination of land, trees and water and is also of interest as a historic shipbuilding centre; and Cabot Park at Malpeque, named in honour of the famous explorer, John Cabot, is a 16-acre area with beautiful sandy beaches and an interesting museum. Several small parks have been developed or are under development. The parks are maintained by the Department of Tourist Development. A fee of \$1 a night is charged for trailer space and of 75 cents a night for tent space in all provincial parks.

**Nova Scotia.**—Steady progress is being made in establishing a provincial park system in Nova Scotia, having the ultimate goal of providing facilities at some 15 to 20 camping-picnic parks and some 40 to 60 picnic parks. During the summer season of 1966 there were in operation 10 camping-picnic parks, 35 picnic parks and 12 roadside table sites. Five additional camping-picnic parks were under development and suitable sites were being acquired for more picnic parks.

Provincial financial assistance is available to municipalities for the development of local parks which might serve as adjuncts to the provincial park system. An inventory of the recreational resources of the province is being conducted under the Canada Land Inventory program. This includes a survey of the coast line, one of the results of which will be consideration of the acquisition of good public beaches.

**New Brunswick.**—The Department of Lands and Mines is responsible for the development of the provincial park system, which includes 15 regional park sites ranging in size from 25 to 200 acres, 19 picnic campsites and 30 roadside picnic sites. All picnic and camping grounds contain tables, some form of toilet facility and a potable water supply but more elaborate facilities are available in the larger parks. Most sites are adjacent to or easily accessible from main trunk roads. No entrance fee is charged at any of the sites, but a daily camping fee of \$1.00 to \$1.50 is in effect at 16 of the larger parks and campsites.

The total number of visitors to provincial parks in 1965 exceeded 1,000,000, campers numbering 113,000; 75 p.c. of the campers using park sites come from outside the province and about 40 p.c. of the day-use visitors are non-residents. Most of the park sites are located in rural areas, fairly evenly distributed throughout the province. A five-year ARDA program of expansion and improvement of park and campground facilities is being undertaken, which will include the development of approximately 1,000 tent and trailer sites, accommodation for day-use of beaches, forest and wildlife recreation areas, scenic lookouts, etc., land purchase and provision of special facilities where warranted by intensity of use, such as boats, ramps, docks, canteens and playgrounds.

The Department maintains a Game Farm at Magnetic Hill near Moncton where various species of wildlife to be found in the province are displayed.

**Quebec.**—The Province of Quebec has established six provincial parks and 12 fish and game reserves. Four of the park areas are quite extensive. La Vérendrye Park, 140 miles northwest of Montreal, has an area of 4,953 sq. miles; Laurentide Park, 30 miles north of Quebec City, is 3,613 sq. miles in extent; Mont Tremblant Park, 80 miles north of Montreal, 920 sq. miles; and Gaspesian Park, in the Gaspé Peninsula, 514 sq. miles. Mont Orford Park, situated 15 miles west of Sherbrooke, has an area of 16 sq. miles and Oka Provincial Park near Oka, 1.5 sq. miles.

Fish and Game Reserves together occupy over 43,000 sq. miles. The Chibougamau Reserve, the Mistassini Reserve and the Assinica Reserve, all northwest of Lake St. John,

have areas of 3,400, 5,200 and 3,850 sq. miles, respectively, and farther north is the James Bay Reserve with an area of 25,000 sq. miles. The Aiguebelle Reserve in Abitibi County has an area of 100 sq. miles, the Baie Comeau and Chicoutimi Reserves in the Lake St. John area, 480 and 678 sq. miles, respectively, and the Kipawa Reserve in Témiscamingue County, 3,090 sq. miles. Adjoining Gaspesian Park are the Chic-Chocs and Matane Reserves with areas of 325 sq. miles and 500 sq. miles, respectively, and in Rimouski County is the Horton Reserve with an area of 310 sq. miles; the latter is the only Reserve operated for hunting as well as fishing. Excellent salmon fishing is available in the Gaspé area where the government maintains facilities for anglers along the Port Daniel, St. Jean and Petite Cascadé Rivers. Facilities are also provided along the estuary of the Moisie River on the north shore of the St. Lawrence River about 15 miles east of Sept Îles.

These parks and reserves are wilderness areas of great scenic interest and are for the most part mountainous country threaded with many rivers, lakes and streams and abounding in wildlife. In all of them, except Mont Orford Park and Oka Provincial Park, excellent fishing may be found and most of them have been organized to accommodate sportsmen and tourists in camps, cottages and lodges. Mont Tremblant Park, located close to a famous year-round recreational area, is easily reached in summer by highway from Montreal and is very popular for tent or trailer camping and for swimming and picnicking. Mont Orford has an 18-hole golf course and, in winter, is the rendezvous of Canadian and United States skiers and the site of the Canadian Alpine downhill and slalom championship competitions. Hunting is forbidden in the parks and reserves, except Horton, Joffre, Kipawa and James Bay. In recent years, controlled moose hunting in Laurentide, La Vérendrye and Matane Parks has been allowed to remove the surplus population.

The ever-increasing popularity of camping in Quebec has prompted the Department's Park Service to establish camping facilities. Four areas are now well organized for this purpose—Val Jalbert, one mile east of Roberval in Lake St. John County; Grand Métis, six miles from Mont Joli and Cap Bon Ami, both in the Gaspé Peninsula; and Batiscan on Highway 2, 25 miles east of Trois-Rivières. To expand this program, the Department has purchased the St. Maurice Reserve, a 131-sq. mile area north of Shawinigan in Champlain County.

**Ontario.**—The development of provincial parklands in Ontario continues at a rapid rate. In 1954 there were only eight provincial parks in the province while today there are 92 such parks available for public use. In addition, several new parks are in process of development and 54 other areas encompassing almost 800 sq. miles are reserved for future development. The total area in the Ontario Provincial Park system is about 5,850 sq. miles.

The four largest provincial parks—Algonquin, Quetico, Lake Superior and Sibley—together have an area of about 5,200 sq. miles. Algonquin Park, the largest in the system, is a beautiful area 2,910 sq. miles in extent 180 miles north of Toronto and 105 miles west of Ottawa; it has 14 picnic and campgrounds which are accessible by car from Highway 60 and offers particularly fine canoeing opportunities within its interior. Quetico Park covering 1,750 sq. miles, is accessible by Highway 11 at the Dawson Trail Campground on French Lake and also by water via Basswood Lake in the south. Highway 17 north from Sault Ste. Marie provides access to Lake Superior Park, and Sibley Park may be reached by road from Highway 17 east from Port Arthur.

Under the Wilderness Areas Act, which came into effect in 1959, 42 areas have been established. These areas, widely distributed across the province, vary in size, character and significance but all are regarded as important for their historic, scientific, aesthetic or cultural values. The largest is a 938-sq. mile block covering the Pukaskwa area on the north shore of Lake Superior and the second largest is a 225-sq. mile area of treeless tundra in the northeastern tip of the province at the point where Cape Henrietta-Maria juts out into Hudson Bay; this area is the most southern arctic tundra in the world and its primitive

unspoiled landscapes and characteristically arctic wildlife are being preserved for scientific study and as unique features of the province. All other wilderness areas are less than 1 sq. mile in size.

Ontario has made another advance in meeting the rising pressures for recreational space by applying the concept of the recreational reserve. The recently created North Georgian Bay Recreational Reserve covers 4,500 sq. miles of interesting country lying generally between Algoma and Parry Sound on the north shore of Georgian Bay and including the channel between Manitoulin Island and the mainland, the 30,000 Islands, the famous route of the voyageurs via the French River, the remaining shoreline of Lake Nipissing and the LaCloche Mountains. The Reserve is not a National Park nor is it a Wilderness Area but an area following a normal course of development which is already used extensively for recreation. The plan is, by guiding the evolution of the area, to realize its full potential as a recreational paradise serving all types of needs and co-existing with a landscape of normal activity.

Ontario's vast lakeland areas make this province a vacation paradise and the number of park visitors increases year by year. Attendance in 1965 was 8,875,668 persons and campers numbered 902,472. Charges for vehicle entry are \$1.00 a day or \$5.00 a year and camping charges are \$1.50 a night or \$9.00 a week. At supervised tent and trailer campsites, picnic tables, fireplaces, tested drinking water and washrooms are provided. New campsites are being added at the rate of 500 to 1,000 a year and in 1965 numbered approximately 16,000.

Interpretative and naturalist programs are being continually expanded and such services as museums, outdoor exhibits, conducted trips, illustrated talks and labelled nature trails were available in 19 parks in 1965.

The parklands of Ontario are administered by the Parks Branch of the Department of Lands and Forests. Detailed information is contained in various booklets and maps available on request from the Department of Lands and Forests, Parliament Buildings, Toronto.

**Manitoba.**—The provincial park system of Manitoba, administered by the Parks Branch of the Department of Mines and Natural Resources, consists of four major classifications of outdoor recreational development: *provincial parks* which are large-area parks with a variety of natural attractions suited to many outdoor activities; *recreational areas*, the natural attractions of which are modified to accommodate recreational activities of an intensive nature; *waysides*, or highway parks which enhance travel routes and provide attractive rest stops; and *heritage areas*, which are areas of outstanding scenic beauty or have natural and physical features of special provincial interest.

Manitoba's Centennial \$5,000,000 parks program includes the development of three new provincial parks, the rehabilitation and expansion of existing recreational areas with a view to providing new camping and improved day-use facilities, and the development of the heritage area program to preserve and interpret sites, large and small, illustrating the natural and human history of the province. A survey has been conducted to establish a development policy for waysides and a study of the shoreline potentials along Lake Winnipeg and Lake Manitoba will provide guidance for the future development of the interlake area.

At present Manitoba has nine provincial parks with a total area of 2,854 sq. miles, of which area 1,945 sq. miles are within provincial forests. In addition, there are 40 recreational areas ranging in size from 2.5 acres to 2,000 acres, and many picnic sites, campgrounds and trailer parks. Hunting and fishing lodges are common and accommodation in some of the parks runs the gamut of modern resorts and motels, hotels and cabins. Golf, tennis, swimming and boating facilities are available, as well as children's playgrounds. About 115 commercial concessions operate within the park system giving a variety of services ranging from restaurants to riding stables and boat marinas. The number of park visitors continues to increase impressively each year. In 1964 they

totalled nearly 1,500,000 and camping groups accommodated in tents, trailers or truck campers numbered about 31,000. Admission fees to provincial parks are 50 cents per car per day or \$3 per season.

**Saskatchewan.**—Saskatchewan has 14 provincial parks with a total area of 1,803 sq. miles. Cypress Hills, Duck Mountain, Greenwater Lake and Moose Mountain are operated as summer resorts with chalet, lodge, cabin and trailer accommodation as well as camp and picnic facilities. The other parks have trailer sites and camping, picnicking, boating and swimming facilities. Recreational activities include fishing, boating, swimming, golf, tennis, dancing, baseball, hiking, nature study, horseback riding, etc., and the parks are all well fitted with playground and beach equipment for children. In Cypress Hills Park, elk, antelope, deer, sharp-tailed grouse and beaver are present, and the streams have been stocked with brook and other trout. Heavy stands of tall, straight lodgepole pine and white spruce provide a unique forest cover in this area. In Duck Mountain, Moose Mountain and Greenwater Lake Parks, moose, elk and bear appear variously, and deer and beaver are common to all, as well as several varieties of grouse and many species of water and smaller land birds. Spruce, poplar and white birch provide excellent cover for wildlife. Pickerel, pike and perch are prevalent in most of the lakes. Lake trout are ardently sought by fishermen in the northern lakes. Three wilderness parks—La Ronge, Nipawin and Meadow Lake—offer wilderness-style canoe routes and ‘fly-in’ commercially operated fishing and hunting camps. Many roadside picnic grounds are located throughout the province and several excellent Trans-Canada Highway campsites are in use.

Sites of historic interest are marked throughout the province and include the Touchwood Hills Hudson's Bay Post, Cannington Manor Historic Park and Wood Mountain Historic Park, all of which have picnic facilities.

**Alberta.**—In Alberta, 44 provincial parks have been established, 41 of which, with a total area of approximately 170 sq. miles, are in use and continuing development. Cypress Hills Provincial Park with an area of 78 sq. miles is the largest and is situated in the southeast portion of the province. Other parks are: Aspen Beach, Beauvais Lake, Big Hill Springs, Big Knife, Bow Valley, Bragg Creek, Crimson Lake, Cross Lake, Dillberry Lake, Dinosaur, Entrance, Garner Lake, Gooseberry Lake, Hommy, Jarvis Bay, Kinbrook Island, Lac Cardinal, Little Bow, Little Fish Lake, Long Lake, Ma-Me-O Beach, Miquelon Lake, Moonshine Lake, O'Brien, Park Lake, Pembina River, Red Lodge, Rochon Sands, Saskatoon Island, Sir Winston Churchill, Taber, Thunder Lake, The Vermilion, Tillebrook Trans-Canada Campsite, Wabamun Lake, Williamson, Willow Creek, Winagami Lake, Woolford and Writing-on-Stone. These parks are generally provided with picnic, camping and playground facilities and are maintained by the Department of Lands and Forests primarily for the recreation and enjoyment of the residents of the province. There is a park within easy reach of almost every town. The most northerly park is Lac Cardinal, about 28 miles southwest of Peace River, and the southernmost park is Writing-on-Stone which adjoins the Alberta-Montana border. Alberta's provincial parks were visited by 2,757,500 tourists and vacationists in 1965.

In addition to the recreational parks, 23 sites have been established to mark and preserve locations of historic interest. They include: Athabasca Landing, Buckingham House, Bugnet Plantation, Coronation Boundary Marker, Early Man Site, Fort DeL'Isle, Fort George, Fort Vermilion, Fort Victoria, Fort White Earth, Frog Lake Massacre, Hay Lakes Telegraph Station, Massacre Butte, Ribstones, Rocky Mountain House Fort, Standoff, Stephansson, Twelve Foot Davis, Shaw Woolen Mill, Rev. George McDougall's Death Site, Fort McLeod, Indian Stone Pile and St. Joseph Industrial School.

Provided also for Albertans are the Wilderness Provincial Park, which adjoins Jasper National Park in the north and extends along the British Columbia border, and two wilderness areas established under the Forest Reserves Act in 1961. The Wilderness Provincial Park has an area of 2,149 sq. miles, Siffleur Wilderness 159 sq. miles and White

Goat Wilderness 489 sq. miles. The wilderness areas have been set aside to preserve as far as possible the natural scene and are not subject to any development or provided with roads.

**British Columbia.**—There are 239 (170 developed) provincial parks in British Columbia, having a total area of about 10,018 sq. miles. These parks are classified as A, B, C and Nature Conservancy Areas. Class A parks are intended to preserve outstanding natural, scenic and historic features of the province for public recreation; they have a high degree of legislative protection against exploitation and alienation. Class B parks are also primarily for the protection of natural attractions but other resource use is permitted if it does not unduly impair recreational values. Class C parks are intended primarily for the use of local residents and are generally managed by local park boards. Nature Conservancy Areas in any park are fully protected from resource development and are dedicated to a variety of recreational uses. There are immense wilderness areas such as Tweedsmuir Park and Wells Gray Park and outstanding scenic and mountain reserves such as Garibaldi, Mount Robson, Manning and Bowron Lakes Parks. The formal gardens of Peace Arch Park are a monument to the goodwill between Canada and the United States. Vancouver Island has a chain of small forested parks that have achieved tremendous popularity with tourists; the best known are Little Qualicum Falls, Miracle Beach and Goldstream. The famous gold town of Barkerville has been restored and become the first Provincial Historic Park; Fort Steele in the East Kootenay area is also being restored to preserve another of British Columbia's pioneer settlements. Nine marine parks with mooring facilities and campsites have been developed on the islands of the Strait of Georgia for the benefit of water-borne vacationers.

The popularity of British Columbia's parks, with their integrated campsites and picnic areas, is attested by the fact that about 4,800,000 park visits were recorded during 1965; about 25 p.c. of the visitors were campers and the remainder day visitors. Records show that Mount Seymour, Cultus Lake and Alouette Lake Parks were the most heavily used.

### Subsection 3.—Ottawa, Canada's National Capital\*

Canada's capital city lies in a magnificent natural setting, its hub high on the limestone bluffs bordering the Ottawa River where it tumbles over the Chaudière Falls and where, a short distance downstream, the lazy Rideau River falls in twin curtains over the cliffs from the south and the once-turbulent Gatineau River flows in from the north. Here Champlain paused and portaged on his way westward in 1613. The priests, soldiers and traders who followed him travelled past these cliffs and around the rapids. By this place passed most of the great overland explorers. Champlain called the river "la grande rivière des Algonmequins" and early English traders called it the Grand River. "Ottawa" is the anglicized form of Outaouac or Outaouais, the name of a tribe of Indians from Lake Huron who traded with the French in the seventeenth century. They carried their furs by the river that now bears their name. The first settlement in this region is associated with an American from Massachusetts, Philemon Wright, who, in 1800, located on the north shore of the river where Hull stands today, bringing with him families and tradesmen and forming the nucleus of a busy community. Taking advantage of Britain's needs for squared timber, Philemon Wright ran the first raft of white pine to Quebec in 1806, and started the Ottawa River squared timber trade that soon came to be fostered by British tariff concessions. This was the beginning of a great industry that remained the life blood of the community for half a century.

Settlement on the south side of the river did not begin in earnest until a generation later. During the War of 1812 communications by the St. Lawrence River, the main route to the settled area in Upper Canada, had been under American attack and a safer water route between Montreal and the Great Lakes was considered an urgent need for the

\* Prepared in the Information and Historical Division, National Capital Commission, Ottawa.

future. Ten years were spent in sporadic investigation and consideration of a route by the Rideau and Cataraqui River systems and finally, in 1826, Lieutenant-Colonel John By of the Royal Engineers was sent to the Chaudière to build a canal from that point to Kingston. The next year two companies of Royal Sappers and Miners, numbering 162 men, began the construction. To Colonel By also goes the credit of planning the original townsite which was, in 1827, named Bytown in his honour. Where Ottawa's central area is today, the Earl of Dalhousie, the then Governor-in-Chief, had wisely secured commanding ground for the Crown in 1823 and, adjacent to this, Colonel By laid out two settlements called Upper Town and Lower Town, separated by part of the Government lands called Barrack Hill. The canal was finished in 1832 and the town that sprouted around Colonel By's military camp began to grow and prosper. Stores and banks were set up, churches and schools were built and a little manufacturing community was started in New Edinburgh near Rideau Falls.

Bytown was now the inland centre of the squared timber trade and by 1850 could boast of some fine stone buildings, among them the home of Thomas MacKay which today forms the central part of the residence of the Governor General of Canada. A change then occurred in the timber industry, the British system of preferential import duties on squared white and red pine logs was abandoned and trade began to decline. However, by this time the accessible forest stands of the eastern United States were depleted and sawn lumber was needed to house a growing population. Also, the American railway and canal network had extended to the Canadian border, making transportation easy. Encouraged by these favourable conditions and the newly recognized availability of hydro-electric power, a group of American and other lumbermen came to Bytown, beginning in 1853, and established sawmills by the Chaudière Falls. Soon the islands about the falls and the flats on both shores were covered with lumber piles and loaded barges were on their way to the American market. The sawmill industry began its rise to dominating importance.

At the beginning of 1855, Bytown became a city and took the name Ottawa, just in time to receive a great honour and to assume a great responsibility. The United Province of Canada, since its formation in 1841, had shuttled its capital between Kingston, Toronto, Montreal and Quebec and was now trying to agree on a permanent site. At the end of 1857 Queen Victoria settled the dispute by choosing Ottawa. Government buildings for the new capital were designed and contracts were let in 1859 for their construction. However, the task was hard and the cost much greater than expected and it was not until 1866 that the government of the Province of Canada actually moved to Ottawa. The next year the first Parliament of the new Dominion of Canada met in an incomplete Parliament Building, situated on the former Barrack Hill.

The nation enjoyed a brief prosperity during most of the next decade. Ottawa grew and the government expanded as the Dominion extended its authority over more and more of British North America. In 1871, shortly after Confederation, the city had a population of about 22,000. Many fine homes and stores in stone and brick were built. The Departmental Buildings, flanking the Parliament Building on the Hill, were enlarged. An old wooden City Hall near the Canal was replaced in 1876 by a fine stone building and a large post office was erected at the city's centre. By the end of the nineteenth century, Ottawa was a flourishing industrial centre with a population of 59,000. It remained the hub of the lumbering industry of Eastern Canada, had the largest paper mills in the country and the leading match factory in the world. However, little effort had been made to preserve or enhance its natural beauty until the Ottawa Improvement Commission was set up in 1899 and the Driveway along the Rideau Canal was begun. Even so, progress was slow in this direction but in the years up to the beginning of the First World War the city centre began to take on a new face. Many new government buildings were erected—laboratories, the Dominion Observatory and the Geodetic Building at the Experimental Farm, the Archives Building, the Victoria Memorial Museum, the Royal Canadian Mint and the Connaught Building. In 1912, the Grand Trunk Railway completed construction of the Union Station and of the French renaissance-style Chateau Laurier whose turrets

continue to grace the Ottawa skyline. During this period several studies were made and plans recommended for the improvement of the National Capital but these were deferred because of the War and for other reasons. Fire destroyed the Parliament Building in 1916, leaving standing only the octagonal library now forming part of the magnificent building of modern Gothic architecture which replaced it but was ten years in the building. The city beautification program was continued by the Ottawa Improvement Commission on a slightly increased budget until 1927; in that year the Commission was reconstituted as the Federal District Commission and the program then proceeded at a more accelerated rate. The second Commission was succeeded in 1959 by the National Capital Commission.

The City of Ottawa today, with its population of close to 300,000, is well on its way to becoming a national capital of enduring beauty and grace. It is a self-governing municipality, administered by an elected City Council, but there are underlying differences which set it apart from all other major Canadian centres. Historically, it has always been the meeting place for the two founding peoples. It is the national Seat of Government and throughout the years the federal authorities have recognized the need of creating in and around the National Capital an area of pride, not only for the residents of the city and its environs but for all Canadians.

Much of the work of the National Capital Commission hinges on the implementation of a long-range Master Plan, developed by the late Jacques Gréber, a famed French town-planner. The Gréber Plan tabled in the House of Commons in 1951, although not officially recognized by the Provinces of Quebec and Ontario, is the basis of much that has been accomplished. In fact, ten years after its publication it was reported that all its major proposals were in process of realization.

Success of the Plan, now and in the future, is dependent on co-operation between the Federal Government, the governments of the Provinces of Ontario and Quebec, the Cities of Ottawa, Hull and Eastview and about sixty-five other autonomous municipalities in the National Capital Region. The Plan itself was conceived as a memorial to all Canadians who gave their lives in the defence of Canada during the Second World War and was projected over a fifty-year period. It called first for the establishment of a National Capital Region encompassing some 900 sq. miles but later, in 1959, this was doubled to 1,800 sq. miles—about half in Ontario and half in Quebec. In accordance with its proposals, large "open spaces" are being provided in the Ottawa-Hull area, part of which involves the restoration of the shores of the waterways. Major restorations have taken place at Rideau Falls opposite the Ottawa City Hall, at Jacques Cartier Park in Hull, and at Vincent Massey Park which is a 75-acre urban park in the heart of Ottawa, linked with the 50-acre Hog's Back Park surrounding the limestone chasm of Prince of Wales Falls on the Rideau River. Forty miles of riverfront land are under the control of the Commission and countless delightful areas are accessible to the public. There are some 50 miles of wide, landscaped driveways throughout Ottawa which will be extended by another 30 miles in coming years. In addition the Commission maintains 13 city-owned parks in Ottawa, including Rockcliffe and Strathcona Parks. At present Ottawa has 4,000 acres of open space.

The relocation of government buildings to suitable scattered sites has been under way for several years. The first development took place at Tunney's Pasture located on the Ottawa River in the west-central area of Ottawa. The Pasture now contains 18 buildings of various sizes. Confederation Heights, in the south-central area adjoining Hog's Back Park, now contains six attractive and functional buildings that house Government Departments, and the large Government Printing Bureau was established in Hull. In all, the grounds of more than 140 government buildings are cared for by the Commission.

Two key proposals in the Master Plan with long-range effects on Ottawa's future are the creation of the Greenbelt and the removal of railway trackage from the central sections. The Greenbelt, designed to control urban sprawl and to provide sites for governmental, industrial and research development, is a unique planning measure in North America. Within its 41,500 acres the Commission encourages agriculture, reforestation and public recreation areas.

Railway relocation, possibly the most important element of the National Capital Plan, will be largely completed by 1967. It involves removal of 32 miles of track, much of it in the central sections of the city, elimination of 72 level crossings, many in high density urbanized areas, and is a prime consideration in Federal Government redevelopment of LeBreton Flats, the old Union Station sector in downtown Ottawa which has now been cleared, and sections of Sussex Drive near the approaches of the new Macdonald-Cartier Bridge across the Ottawa River.

North of Ottawa and Hull, in Quebec, an 88,000-acre recreation area known as Gatineau Park has been developed by the Commission. It is a wilderness area, extending northward from Hull for 35 miles. With 25 miles of parkway, magnificent lookouts, lakes, fishing streams, beaches, picnic areas, camping sites and walking trails, the park is one of the finest recreation areas in Canada, enjoyed by tens of thousands of visitors yearly.

In addition to its own programs, the National Capital Commission extends planning aid and advice to municipalities in the National Capital Region but only on request; at no time does the Commission seek to impose its proposals on the autonomous governments concerned with local affairs in the region. Financial aid in the form of grants is made to municipal governments in special circumstances.

The Commission has 20 members, including a chairman, and employs between 600 and 800 people, depending on season, in carrying out its development and maintenance programs. It reports to Parliament through the Minister of Public Works.

## Section 2.—Wildlife Resources and Conservation\*

Wildlife in Canada is an important renewable natural resource. In the early days wildlife was, and in remote areas still is, a form of sustenance in the hinterland, and trade in fur determined the course of exploration and settlement. During the period of the opening up of the country, a number of mammals and birds became seriously depleted or extinct. The passenger pigeon, the great auk and the Labrador duck became extinct, the buffalo vanished from the prairies, and elk, prong-horn antelope, and muskoxen were reduced to small fractions of their former numbers. Wildlife habitat has been reduced by the cutting and burning of the forests, the pollution of streams, industrial and urban development, drainage of wetlands, building of dams, and other changes in the land.

Wildlife has been changed and influenced by man to the degree that he has changed and influenced the environment for wildlife. The arctic and alpine tundra, one of Canada's major vegetational regions, has been changed hardly at all; the adjacent subarctic and subalpine non-commercial forests have been changed principally as a result of increased human travel causing more forest fires; the great forest farther south has not lost its real character through being managed for commercial use; cultivable lands, whether originally forest or grassland, have completely changed but often they and the managed forest are better for some forms of wildlife than the original wilderness. There are more moose, deer, ruffed grouse and probably more coyotes than in Indian days. Fur species, such as beaver and muskrat, are easily managed and many small mammals and birds thrive better in fields and woodlots than in the virgin forests, provided that they are not poisoned by pesticides. At the present time, the harvestable surplus of game and fur species across Canada is seldom fully utilized and it is quite clear that wildlife will remain abundant wherever there is suitable habitat and enlightened management.

Thus, Canada today is known throughout the world for the wealth and variety of its wildlife. It maintains most or all the existing stocks of woodland caribou, mountain sheep, wolves, grizzly bears and wolverines, to mention a few. And these animals exist not only

\* A series of special articles relating to the wildlife resources of Canada has been carried in previous editions of the Year Book. See the list of special articles in Chapter XXVII, Part II, under the heading of "Fauna and Flora".

because of the vastness of their habitat but also because of man's efforts to preserve them. There is evidence of concern about the preservation of wildlife by the early Canadians; there were game laws in force in the original provinces when all but a few thousand acres of land were still the patrimony of the Indians. In 1885 pioneer conservationists were instrumental in establishing Banff Park in Alberta, and in 1887 a bird sanctuary, the first on the Continent, was established at Last Mountain Lake in Saskatchewan. Concern to preserve Canada's wildlife heritage led to the complete protection of wood bison in 1893 and to the purchase and establishment of a nucleus herd of plains bison at Wainwright in Alberta in 1907. Thus was formed the basis of wildlife conservation efforts, which, for a long time, took the form of protection of certain species from destruction by man or predator. Better knowledge of nature's operations and recognition that many factors combine to cause fluctuation in wildlife numbers are now being reflected in scientifically based hunting seasons and limits. The science of animal numbers is new and sometimes runs counter to popular prejudice but it is well understood that any area will support only so many animals, and species that are highly productive must have a quick turnover. Consideration of wildlife must never be separated from consideration of its environment and if the environment is fully stocked the annual increment need only replace the losses. All extra is surplus, only part of which is taken by predators and part, if the animal is a game species, by man.

As a natural resource, wildlife within the provinces comes under the administration of the respective provincial governments; wildlife on federal lands and certain problems of national or international interest are the concern of the Federal Government.

**The Canadian Wildlife Service.**—The Canadian Wildlife Service deals with most wildlife problems coming within the jurisdiction of the Federal Government. It was organized in 1947 to meet the growing need for scientific research in wildlife management and became a Branch of the Department of Indian Affairs and Northern Development in 1966. The Service conducts scientific research into wildlife problems in the Northwest Territories, Yukon Territory and the National Parks, advises the administrative agencies concerned on wildlife management, and co-operates in the application of such advice. It administers the Migratory Birds Convention Act, provides co-ordination and advice in connection with the administration of the Game Export Act in the provinces, deals with national and international problems relating to wildlife resources, and co-operates with other agencies having similar interests and problems in Canada and elsewhere.

The Migratory Birds Convention Act was passed in 1917 to give effect to the Migratory Birds Treaty signed at Washington in 1916. The Canadian Wildlife Service is responsible for recommending the annual revision of the Migratory Bird Regulations, which govern such matters as open seasons for migratory game birds and other hunting details, taking and possessing migratory birds for scientific or propagating purposes, eiderdown collecting, etc. The Act and Regulations thereunder are enforced by the Royal Canadian Mounted Police, and in both administration and enforcement co-operation is received from provincial authorities. There are 106 migratory bird sanctuaries in Canada, having a total area of 43,887 sq. miles. Bird banding provides valuable information on the migration of birds and their natural history and is especially useful in waterfowl management. Serially numbered bands supplied by the United States Bureau of Sport Fisheries and Wildlife are used in Canada as well as in the United States.

A national wildlife policy and program was tabled in the House of Commons in 1966 after comprehensive discussions with the provinces and citizens' conservation organizations. The new policy is designed to increase research programs, to bolster dwindling wildlife resources, to provide better information to serve all wildlife interests, and to improve the supply of professionally trained wildlife biologists. Many research projects under way were continued during 1966. These included the study, in co-operation with the governments of Manitoba and Saskatchewan and the Council of the Northwest Territories, of barren-ground caribou and of wolves that prey upon caribou. Human utilization is still

the most important factor in herd reduction but other significant factors from time to time include effects of forest fires on winter range, predation, accidents, and poor calf survival. Studies were continued on mink, muskrat and beaver in the Mackenzie District, and of polar bear in Keewatin and Franklin Districts. Big game mammals in the National Parks were also the object of continued study, special attention being given to mountain sheep and elk in the mountain parks of Alberta, where large populations of those species facilitate investigations. In Wood Buffalo Park, investigations into the problems of disease and low reproductive rates among bison were continued in the hope that some control of each might be achieved. A small herd of wood bison was captured, certified as disease-free and transferred to Elk Island National Park for propagation and eventual release in areas of the species' original range. Studies of the relationship between forests and wildlife were initiated in New Brunswick in co-operation with the federal Department of Forestry and Rural Development.

Damage to cereal crops by wild ducks and sandhill cranes continued to receive intensive study and much time was devoted to other species greatly reduced in number or in danger of extinction, such as the trumpeter swan and whooping crane. Investigations of migratory waterfowl were expanded. Kill surveys previously conducted in Prince Edward Island, New Brunswick, Quebec and Ontario were replaced by a single country-wide survey based on sales records of the Canada Migratory Game Bird Hunting Permit, which was used for the first time in 1966. A crop-damage survey in the Prairie Provinces is being conducted annually. Arctic bird-banding programs were continued, as were pilot programs of wetlands leasing. The loss of wetlands to drainage and filling for agricultural and other purposes poses a serious threat to the waterfowl resource. A major program of preserving wetlands by leasing and acquisition will begin in 1967.

The Service opened a new Prairie Waterfowl Research Centre on the campus of the University of Saskatchewan in Saskatoon in 1966. Also, a national registry of pesticide residues in wildlife has been established. Research in limnology is oriented toward the maintenance of adequate stocks of fish. Subjects of research include productivity of National Park waters, the biology of fish and associated fauna. Adequate stocks of game fish are provided and maintained through modern methods of management where they can be applied without detriment to the aesthetic values of the areas concerned.

The Service's research staff totals 59. Specialists covering mammalogy, limnology, migratory bird populations, migratory bird habitat, ARDA, pesticides, pathology and biometrics are stationed at the head office in Ottawa. Offices are located at Fort Smith and Inuvik, N.W.T., Whitehorse, Y.T., Vancouver, B.C., Edmonton, Alta., Saskatoon, Sask., Winnipeg, Man., Ottawa and Aurora, Ont., Quebec, Que., Sackville, N.B., and St. John's, Nfld. Headquarters for the Western Region is in Edmonton and for the Eastern Region in Ottawa. A number of university graduates and undergraduates are engaged annually to assist in summer field work. Sixteen officers are engaged in an inventory of wildlife land capability under the ARDA program; the Canada Land Inventory will cover 1,000,000 sq. miles of Canada, primarily in the southern portions, and will be completed in the next four years. A program to offer scholarships of \$1,200 to graduate students in wildlife and allied fields was in its third year in 1966, when ten scholarships were awarded.

**Provincial Government Wildlife Conservation Measures.**—As stated previously, each province has jurisdiction over its own wildlife resources. The measures adopted by the respective provincial governments to conserve these resources are outlined in the 1963-64 Year Book at pp. 46-52. The conservation of wild fur-bearing animals in the different provinces is discussed in the Fisheries and Furs Chapter, Part II, and information on provincial conservation of fisheries resources is given in Part I of the same Chapter, together with data relating to the work of the Fisheries Research Board of Canada and to international fisheries conservation (see Index).

## PART III.—CLIMATE AND TIME ZONES\*

### Section 1.—Climate

Just as there are great differences in the weather throughout Canada at any given instant, there are also many climates. These climates are similar to those in Europe and Asia extending from the Arctic down to the mid-northern hemispheric latitudes. Because Canada is situated in the northern half of the hemisphere, most of the country loses more heat annually than it receives from the sun. The general atmospheric circulation compensates for this and at the same time produces a general movement of air from west to east. Migrant low pressure areas move across the country in this "westerly zone", producing storms and bad weather. In intervals between storms there prevails the fair weather associated with high pressure areas.

Although the movement of migrant high and low pressure systems within the zone of the westerlies is the most significant climatic control over Canada, the physical geography of North America contributes greatly to the climate. On the West Coast, the western Cordillera limits mild air from the Pacific to a narrow band along the coast, while the prairies to the east of the mountains are dry and have extreme temperatures because they are shielded from the Pacific Ocean and are in the interior of a large land mass. In addition, the prairies are part of a wide north-south corridor open to rapid air flow from either north or south which often brings sudden and drastic weather changes to this interior area. On the other hand, the large water surfaces of Eastern Canada produce a considerable modification to the climate. In southwestern Ontario winters are milder with more snow, and in summer the cooling effect of the lakes is well illustrated by the number of resorts along their shores. On the East Coast, the Atlantic Ocean has considerable effect on the immediate coastal area where temperatures are modified and conditions made more humid when the winds blow inland from the ocean.

The following table gives temperature and precipitation data for typical stations in the various regions of Canada. Temperatures in this table refer to observations taken in a thermometer shelter which has been placed in a representative location with the thermometer bulbs four feet above the surface of the ground. Mean January and July temperature data are based on records over the 30-year period from 1931 to 1960 except for far northern stations where the available period of record is shorter. After an average temperature is obtained for each day in January over a 30-year period, the mean January temperature may be arrived at by striking a mean of these 930 daily values. The mean July temperatures may be obtained in a similar manner. The highest and lowest temperatures on record refer to the absolute extremes for the entire period of record at each station. Average dates are shown for the last occurrence in spring of a temperature of 32°F or lower and for the first occurrence in autumn of freezing temperatures at the four-foot level in the thermometer shelter.

The official Canadian rain gauge is a small cylinder in which the rain is caught and then measured to one hundredth of an inch with a simple measuring device. Freshly fallen snow is measured as it lies on the ground and recorded to the tenth of an inch. Total precipitation values as shown in the table are the sum of the total rainfall and one tenth of the total snowfall. For the purposes of this table, a day with precipitation is one on which at least one hundredth of an inch of rain or one tenth of an inch of snow has fallen.

\* Sections 1 and 2 of this part were prepared by the Meteorological Branch of the Department of Transport, Toronto. A comprehensive study on *The Climate of Canada*, also prepared by the Meteorological Branch, was carried in the 1959 Year Book, pp. 23-51. Supplementing that textual material, detailed tabulations of climatic factors for 45 individual meteorological stations across the country were carried in the 1960 Year Book, pp. 33-77. A reprint is available from the above source giving the complete textual and tabular data.

## THE CLIMATE OF THE CANADIAN ARCTIC\*

Early exploration of the Canadian Arctic yielded only limited information on the climate of the region. Although some of the meteorological observations were made by well-equipped scientific groups, the climatic descriptions too often publicized were by those explorers who tended to stress the dark, rigorous aspects of the environment. As a result, in the early decades of the present century the popular concept of the Arctic was a land of perpetual snow, usually stormy and always very cold. The atmospheric processes that shape its climate were often assumed to be unique to the area and independent of those affecting other parts of the hemisphere.

The groundwork for a better understanding of the climate of the Canadian Arctic was laid just prior to 1930 when several weather reporting stations were established on the shores of Hudson Bay, on Baffin Island and along the mainland Arctic Coast. Most of these are considered to be Arctic locations since they are generally north of the tree-line, a limit that is frequently used to define the boundary of the Arctic. North of this well-marked natural boundary line, which runs southeastward from the Mackenzie Delta to the shore of Hudson Bay near Churchill and then eastward over northern Ungava-Labrador, the growing season is too short and too cold to permit tree growth.

Reports from these southern Arctic sites emphasized the dependence of weather in middle latitudes on conditions in the Arctic. The full extent of this relationship could not be investigated, however, until the late 1940s, when weather stations, reporting both surface and upper-air observations, were established in the polar basin on five of the Queen Elizabeth Islands. The weather picture was further clarified after 1955 when regular reports became available from two or three scientific stations on ice islands located in the Arctic Ocean and at the Distant Early Warning Line of radar stations extending along the Arctic Coast from Alaska to Baffin Island. As a result of continuous observations from this expanding network of stations, there has been a great increase in knowledge of the climate of the Arctic and the atmospheric processes that control it. The more important features are discussed below and climatic tables for many of the individual stations are added to facilitate comparison over a standard ten-year period (1951-60). For purposes of climatic comparison it would be advantageous to divide the Canadian Arctic into a number of regions, each with homogeneous climatic features, but the wide spacing of weather reporting stations and their predominantly coastal locations preclude such an approach at this time.

### Climatic Controls

To understand the climate of the Canadian Arctic one must consider to what extent the basic controls of temperate zone climate, such as distance from the equator, the major features of the atmospheric circulation, continental and maritime influences, and the nature of the land surface apply to the Arctic regions. Of these, the far north location is of prime importance, since it is responsible not only for the extreme annual range of daylight but also for the low angle at which the sun's rays strike the earth. The absence of incoming radiation from the sun during the long Arctic night results in sustained cooling of the snow and ice surfaces of the region. After a period of two or three months when the sun rises and sets in a normal 24-hour cycle, there is a period of continuous daylight. At this time, the amount of solar radiation reaching the atmosphere over the Arctic tundra and ice-filled seas is greater than that in southern latitudes but owing to the high reflectivity of the surface only a small percentage of the heat energy remains to heat the earth and the Arctic atmosphere. Snow and ice surfaces and cloud layers, for example, reflect more than 50 p.c. of the incident radiation. Thus, not only is there an extremely large annual range of incoming radiation from the sun but the solar energy received in the course of the year is much less than at lower latitudes. The Arctic regions in fact lose more heat to space than is received from the sun.

\* Prepared by H. A. Thompson, Meteorological Branch, Department of Transport, Toronto.

To make up the annual deficit, heat must be transported into the region and this usually takes place in the upper levels of the Arctic atmosphere. In contrast to this little-publicized transfer of warm air into the Arctic, the compensating sporadic outbreaks of surplus cold air from the Polar regions are well known, especially to persons living in the temperate zone. The southward penetration of the cold air masses into the continent varies, of course, with the season. The advance is not along a broad, continent-wide front, but instead wave-like bulges form along the leading edge, which cause the cold air to surge southward in one area while it retreats northward in another. Deep low pressure areas frequently develop from the waves, spreading clouds and precipitation ahead of them as they move across the country.

For almost eight months of the year, cold air from the Arctic covers all of Northern Canada and large areas of Central Canada. Low pressure areas which form along its southern perimeter travel across the continent under the influence of the mid-latitude belt of prevailing "westerlies" and generally remain well outside the Arctic boundaries. Strong temperature contrasts between land and water in the Baffin Bay area make this a region of frequent cyclonic activity. Although low pressure areas periodically penetrate the Arctic, the usual circulation during the November-to-May period is anticyclonic. Normally a high pressure area persists over the Mackenzie River basin and the western islands of the Canadian Arctic Archipelago during January, then advances eastward to cover the Arctic islands and the "barrens" west of Hudson Bay in April. To the east of this high pressure area, the well-known Icelandic Low and its North American offshoot, the Baffin Bay Trough, maintain a general northwest-to-southeast circulation pattern. Variations in the strength of these northwesterly winds have a most significant effect on the climate of the eastern Arctic during this period.

Although May is a month of continuous daylight in most areas of the Arctic, climatically the atmospheric circulation patterns are still those of the Arctic night. June usually marks the start of a completely changed weather regime, which continues until cold, wintry conditions return to the region in September. The main features of the average circulation during the June-to-August period are the weak low pressure area over the Arctic Ocean, reflecting the alternating influences of low and high pressure areas, and the more prominent low at the south end of Baffin Island, a recognized area of high cyclonic frequency. Even in this period the majority of depressions cross Canada south of the Arctic limits but their influences are frequently felt in the Arctic region, particularly in the Davis Strait-Baffin Bay area. Some low pressure areas move through the Arctic as well, either along the mainland coast of Canada or from the Arctic seas.

While the atmospheric circulation pattern is mainly responsible for the year-to-year variations that occur in Arctic climate, the land and water distribution and relief of the land serve to create characteristic differences in climate from one location to another. The Arctic seas, including the countless channels that surround all islands north of the Canadian mainland, and Hudson Bay make up more than half of the Arctic area and have a dominant influence on the climate of the adjoining lands. The influence is especially marked during the July-to-November period when there is considerable open water in the Arctic waterways but it is scarcely noticeable during the remainder of the year when, except for some well-known local areas of open water, the surfaces are completely ice- and snow-covered. During the "open water" season, maritime influences are, of course, much greater along all coastlines and over the smaller islands than in the interiors of such large land areas as Baffin, Ellesmere or Victoria Islands, or on the Arctic mainland.

Only the most easterly of the islands of the Canadian Arctic Archipelago are predominantly mountainous. The high, ice-capped mountain ranges, which rise along the eastern coastlines of Baffin, Devon and Ellesmere Islands, present a barrier to the entry of mild, moist air from the North Atlantic. The rugged relief of these islands causes locally increased precipitation, mostly along the eastern coastlines. For example, the

heaviest snowfall in the Canadian Arctic occurs at the south end of Baffin Island, where frequent southeasterly winds release their moisture as they are forced to rise over the coastal cliffs. In all other sections of the Arctic, where the rolling hills and plains are generally below 1,500 feet in elevation, the relief is locally important as far as winds and temperatures are concerned but it has little effect on the regional climate.

### General Climate

For more than half of the year the snow- and ice-covered Arctic region is subjected to a "continental" type climate which is modified somewhat by the relatively warm waters beneath the ice. Temperatures average from  $-20^{\circ}\text{F}$  in southern sections to  $-30^{\circ}\text{F}$  in the north during three of the coldest months, generally remain below zero during the whole period, and seldom rise above freezing from October to May. Record low temperatures of  $-55^{\circ}\text{F}$  to  $-60^{\circ}\text{F}$  at most Arctic stations are not as low as the North American record of  $-81^{\circ}\text{F}$  reported at Snag in the Yukon, or even the  $-70^{\circ}\text{F}$  to  $-75^{\circ}\text{F}$  temperatures that have been reported at a few northern locations in the western provinces and Ontario. While eastern sections of the Arctic, in particular, may be subjected to substantial variations in temperature from year to year, large rapid temperature fluctuations during a particular month or season are uncommon. During this season of continuous ice-cover in the seas and channels, the Arctic is relatively cloud-free. Although low pressure areas occasionally cross the region, the cold air is too dry to permit formation of effective snow-producing clouds and, as a consequence, snowfall is very light. The scarcity of Arctic snowfall may be emphasized by comparing annual snowfall totals at Arctic stations with similar figures for cities in Southern Canada. At the Arctic locations of Isachsen, Resolute, Cambridge Bay and Baker Lake, for example, annual snowfall amounts to less than 30 inches, and these figures represent the total precipitation for fully nine months of the year, while the cities of Edmonton, Calgary, Winnipeg and Toronto receive just under 60 inches of snow, most of which falls in less than six months. Although the steady Arctic cold and light snowfall are characteristic features of the winter climate, it is only when they occur in combination with strong winds that travel becomes hazardous or, in the case of heavy blowing snow, even impossible. The most uncomfortable area and the region where blizzards are most frequent is not the high Arctic, but the coastal sections of the eastern Arctic and the barren lands surrounding Hudson Bay, where cyclonic activity is greater and strong winds more frequent than elsewhere in the Arctic.

In June, July and August, low-lying stratus clouds and coastal fogs are notorious features of the climate. During these months all land areas are snow-free, with the exception of the permanently ice-capped mountains which form the eastern boundary of the Canadian Arctic Archipelago, and the waterways lose much of their ice cover. The majority of the land areas are frozen swamps which melt to shallow depths during this period, giving the impression that the Arctic is a very wet region. Precipitation figures do not, of course, bear this out. Rainfall makes up less than half the annual precipitation and averages from one to two inches over the northern islands to three inches along the mainland coast and to seven inches at the southern end of Baffin Island. Arctic rainfall depends mostly on the extent of cyclonic activity during this three-month period and, as this varies greatly from year to year, so also does the rainfall. The water-logged lands and cold, partially ice-covered waterways influence the climate by adding sufficient moisture to create extensive low-lying clouds and fog banks, while holding air temperatures to within a few degrees of the melting point. These months, the mildest of the year, are characterized by a uniform temperature pattern along the coasts, with temperatures generally remaining below  $45^{\circ}\text{F}$  and only occasionally, during brief interludes of sunny weather, exceeding  $65^{\circ}\text{F}$ .

It will be appreciated that the four seasons concept (winter, spring, summer and autumn), so familiar to residents of southern latitudes of Canada, cannot be readily applied to Arctic climates. If, for example, spring is considered to date from the vernal equinox,

then some of the coldest weather of the year occurs in spring. If, on the other hand, it pertains to the start of the thawing season, then spring does not arrive until late May or early June, in which case three seasons, spring, summer and autumn, must be crowded into a three- or four-month period ending with the return of winter in September. In an attempt to provide a more detailed picture of the Arctic climate on a year-round basis, without resorting to rather unsatisfactory seasonal classifications, the year has been divided into four periods for discussion purposes, each period having its own characteristic climatic features.

**The Climate—December to April.**—By December the high Arctic is a region of darkness, the southern islands receive only a few hours of twilight at most and, even in the Hudson Bay area, four or five hours of mid-day sun do little to replenish the heat lost during long hours of darkness. This should not imply complete darkness during the Arctic night of course, since a great deal of useful light results from the moonlight and its reflection from the snow-covered landscape. Equally important to the climate of the area is the fact that the open bays and channels which supplied so much moisture to the air during the preceding four or five months have become mostly ice covered. Maximum sea-ice normally occurs in March, at which time the only significant areas of open water are to be found in Hudson Strait, northern Baffin Bay, Lancaster Sound and narrow coastal leads along the outer islands of the Archipelago.

*Air Temperature.*—Continuous radiational cooling from the snow-covered surfaces causes slowly falling temperatures until late in February, when the sun's rays provide enough warmth to reverse the temperature trend. Although February is the most severe month at high Arctic stations, with March rather than January a close second, the sun's rays are effective at an earlier date over the southern islands and Arctic mainland, where January is usually the coldest month.

Arctic temperatures average well below zero for the months of December through March and, over islands of the Queen Elizabeth group, during April as well. The year's coldest weather may occur at any time during these months. Obviously the Arctic does not earn its reputation as the coldest area in Canada from the extremes of low temperature reported at its stations. If only extremes of minimum temperature are considered, several areas of Canada well south of the Arctic limits are colder. Only one Arctic station in two has a record low temperature colder than  $-60^{\circ}\text{F}$ , and several have never reported temperatures as low as  $-50^{\circ}\text{F}$ . These temperature extremes reflect the moderating influences of relatively warm water beneath the ice-covered channels. At inland locations in the larger islands well removed from the open or ice-covered seas, lower temperatures would be expected.

On a monthly or yearly basis, the Arctic regions are the coldest in Canada. This feature is best illustrated by referring to the average daily temperature chart for January, which is broadly representative of temperature patterns in December, February and, in the high Arctic, March. In the southern Arctic, average temperatures in March are about  $10^{\circ}\text{F}$  higher than those in February. The important features of the temperature pattern are the very cold average temperatures ( $-30^{\circ}\text{F}$  to  $-35^{\circ}\text{F}$ ) over northern Ellesmere Island and adjacent smaller islands, and slightly higher ( $-25^{\circ}\text{F}$ ) readings in all other ice-bound areas of the Arctic region. While temperatures  $10^{\circ}\text{F}$  to  $15^{\circ}\text{F}$  higher along the Arctic's eastern margins reflect the moderating influences of open water in Lancaster Sound and northern Baffin Bay, the highest average temperatures ( $0^{\circ}\text{F}$  to  $-5^{\circ}\text{F}$ ) are found at the entrance to Hudson Strait. This relatively small area, at the southern end of Baffin Island, is dominated by open water and frequent cyclonic activity throughout the period, and its climate differs greatly from that over the remainder of the Arctic region. The severity of the climate of the Arctic is revealed when mean January temperatures of  $-33^{\circ}\text{F}$  at Eureka,  $-25^{\circ}\text{F}$  at Resolute and  $-27^{\circ}\text{F}$  at Baker Lake are compared with the average temperature of  $-19^{\circ}\text{F}$  at Snag, the station in the Yukon that boasts the lowest

recorded temperature in Canada. Mean daily temperatures for March of  $-36^{\circ}\text{F}$  at Eureka,  $-25^{\circ}\text{F}$  at Resolute and  $-15^{\circ}\text{F}$  at Baker Lake are indicative of the great length of the period of severe cold at Arctic stations.

The frequencies of occurrence of low temperatures at these stations provide further evidence of the coldness of the Arctic. During the four coldest months—December, January, February and March—temperatures may be expected to drop as low as  $-10^{\circ}\text{F}$  on 85 to 100 p.c. of the days,  $-20^{\circ}\text{F}$  on 70 to 95 p.c. of the days and  $-30^{\circ}\text{F}$  on 30 to 90 p.c. of the days (the lower frequencies apply to southern sections of the Arctic and the higher values to the northern islands of the Archipelago). Readings of  $-50^{\circ}\text{F}$  are about as frequent at stations in the high Arctic as in the recognized cold spots of the Yukon in December and January but are considerably more frequent in February and March. At the high Arctic stations of Eureka and Isachsen the longest uninterrupted spells with temperatures  $-50^{\circ}\text{F}$  or lower, during the decade 1951-60, were four and five days respectively. On one occasion, temperatures remained below  $-40^{\circ}\text{F}$  at Eureka during ten consecutive days. Several northern Arctic stations have failed to record temperatures higher than  $-30^{\circ}\text{F}$  for periods up to 22 consecutive days.

Sheltered interior locations on the larger islands are subject to greater cooling than are the coastal sites of the weather stations. This is substantiated by the temperature reports from inland Lake Hazen at the north end of Ellesmere Island. During the only winter for which data are available, temperatures were consistently lower at this location than at the nearby stations of Eureka and Alert.

These statistics suggest that even brief warming trends are unlikely during this period. Although temperatures rarely rise above the freezing point north of the Arctic Circle, a favourable alignment of low pressure areas off the east coast may occasionally permit mild Atlantic air to penetrate the eastern sections of the region.

The familiar day-to-night temperature fluctuations of Southern Canada are most evident during April in the Arctic. For the remainder of the period variations during the calendar day are caused by changes in cloud cover or wind speed. Temperatures rise when clouds spread over the Arctic skies or when winds strengthen, and fall when the winds decrease or skies clear. Such random variations during the 24 hours are of the order of 8 to 12 degrees at high Arctic sites and 15 to 20 degrees at southern locations.

*Degree-Days.*—Monthly and annual totals of degree-days below  $65^{\circ}\text{F}$  (heating degree-days) are often used in Southern Canada for predicting fuel requirements for heating buildings, and degree-days below  $32^{\circ}\text{F}$  (freezing degree-days) permit estimates of frost penetration in soils and ice formation in lakes and the sea. Since cumulative degree-day values give an indication of the severity of the climate as well as the duration of cold weather, they may also be used to compare temperature regimes of the Arctic and Southern Canada. Reference to the climatic tables (pp. 64-72) reveals that annual heating degree-day totals at most Arctic stations, with the exception of locations at the south end of Baffin Island, average over 20,000, more than twice the 10,000 heating degree-days at Edmonton and Winnipeg and almost four times the 5,500 heating degree-days during a year at Vancouver. Freezing degree-days decrease from 12,000 over the Queen Elizabeth Islands to 6,000 along the shores of Hudson Strait, in striking contrast to 500 freezing degree-days in a winter at Toronto and 1,500 at Montreal.

*Snowfall.*—Throughout the December–April period the frigid Arctic atmosphere contains so little moisture that the few disturbances venturing this far north produce only thin, diffuse clouds and consequently very light snowfall. Average cloudiness north of the Arctic Circle is just under 40 p.c. South of this latitude, and particularly at the entrance to Hudson Strait, average cloud cover is considerably higher (70 p.c.). Cloudy days are more frequent in those areas of the eastern Arctic influenced by open leads in the

ice-covered channels. Stations in the Arctic Archipelago report less than 10 inches during this period. There is a general north-to-south increase in monthly snowfall from one to two inches over the northern islands, to four inches along the mainland coast and nearly 10 inches at the storm-battered southeast tip of Baffin Island.

*Surface Winds.*—Attention was directed, in an earlier paragraph, to the prevalence of northwesterly winds during the period December to April in all but the extreme western sections of the Archipelago. Although the average circulation is northwesterly, with 40 to 70 p.c. of the winds from this quadrant, winds are so dependent on local topography that considerable variations do exist, often between sites only a few miles apart. Sheltered inland locations experience light, variable winds, while at valley and rugged coastal strips the most frequent and strongest winds follow the valley or coastline.

A surprising feature of the wind pattern over the Archipelago during this period is the large percentage of calms reported at most stations. Calm conditions occur almost 30 p.c. of the time at Isachsen, Mould Bay, Eureka, Resolute and Frobisher Bay and 45 p.c. of the time at Alert. At these stations winds are light (under 10 miles an hour) more than half the time. At Sachs Harbour and at exposed sites on the barrens west of Hudson Bay, approximately one third of all winds fall into this category. Less than 20 p.c. of the winds are in the 20- to 29-miles-an-hour class at most stations, and less than 10 p.c. are strong winds (30 miles an hour or stronger). Over the Arctic islands average wind speeds are about 10 miles an hour although considerably higher average speeds (13–19 miles an hour) are reported from the vicinity of Hudson Bay and Hudson Strait. Hourly wind speeds have exceeded 60 to 70 miles an hour at most locations and several stations along the exposed eastern flank of Baffin Island have reported winds of 100 miles an hour.

*Wind Chill.*—With the exception of the Hudson Bay–Hudson Strait area, winds at most Arctic stations are no stronger than those at cities in Southern Canada. However, because of the low temperatures at which they occur their added chilling effects are considerable. The term “wind chill” is often used to indicate the relative severity, or human discomfort, of the combination of wind and low temperature. On the basis of wind chill, the most severe areas during the coldest month are the barrens northwest of Hudson Bay.

*Blowing Snow.*—Wind speeds are critical because, in addition to winds intensifying the feeling of cold, they are responsible for blowing snow, the major deterrent to travel during this period. As residents of the Prairie Provinces are well aware, blizzards or storms of blowing snow are not confined to the Arctic regions only. However, since Arctic snow is so fine and powdery and since the treeless plains permit a clean sweep by the wind, blowing snow may occur in the Arctic with relatively light winds and it constitutes a much greater problem than on the prairies. In the Arctic, the extent of blowing snow depends on whether the wind is related to local topography or is part of a large-scale circulation pattern. In the latter case, blowing snow conditions, with visibilities often reduced to a few yards, may cover large sections of the Arctic for periods of three or four days.

Visibility in blowing snow varies from station to station but in most cases is directly related to wind speed. Although drifting conditions may be initiated by winds of 10 to 19 miles an hour, less than 5 p.c. of the winds in this speed group give blowing snow during the period December to April. One half of the 20- to 29-miles-an-hour winds may be expected to cause blowing snow and nearly 90 p.c. of strong winds (30 miles an hour) are associated with blowing snow. In the case of strong winds more than 50 p.c. of the reported visibilities are under one half mile, and more than 80 p.c. are less than three miles.

Although visibilities at most Arctic stations are reduced to six miles nearly one third of the time during this period, values low enough (three miles) to restrict aircraft operation are reported less than 25 p.c. of the time. Blowing snow is the cause of the restricted visibility in over half the cases.

*Fog*.—"Steam fog" and "Arctic sea smoke" are the names given to the type of fog that forms when very cold air passes over areas of open water. Steam fog is often observed in the Arctic during the period October to April, but it is relatively localized and usually does not persist more than a few miles downwind from the originating leads, or areas, of open water. Ice fogs occur rather infrequently in the Canadian Arctic because of the lack of moisture in the very cold air. However, as settlements become larger and vehicular and aircraft traffic increases, sufficient moisture may be added to the air through fuel combustion to cause ice fogs at these sites.

**The Climate—May and June.**—Following the return of the sun to the Arctic skies in February, the days lengthen rapidly until, by May, most sections of the Arctic have no sunset. Temperatures start the upward climb, slowly at first in March then more rapidly in April, but above-freezing temperatures are not reached until late May or early June. Even at these late dates sharp falls in temperature to near zero are possible.

May is a month of increased cloudiness and snowfall at most stations, due in part to more numerous open-water leads in Hudson Bay and in some eastern Arctic sounds, and to the arrival of moist air from Southern Canada. Increases are noted as well in the frequencies of fog, particularly in southern sections, but as far as over-all visibilities are concerned these are offset by fewer days with blowing snow.

Temperatures are usually a few degrees above freezing through most of June and, with around-the-clock daylight, the accumulated snow of the previous nine months quickly disappears from all lowland areas. At this time, however, the ice is still fast in most bays and channels. Mild air from Southern Canada is chilled as it passes over the extensive ice surfaces, causing appreciable increases in the frequency of occurrence of low-lying clouds and fog along the coastlines. Fogs are uncommon in the interiors of the larger land masses where sunny days are about as frequent as cloudy days.

**The Climate—July and August.**—During July and August the maritime influence of the seas and channels surrounding the Arctic islands stands out as a major control of the climate. By July, break-up is well advanced over Hudson Bay and in most years the navigation season opens shortly after the middle of the month. The season is delayed two or three weeks longer in the waterways separating the southern islands of the Archipelago, and in the north most of the channels remain practically icebound. Thus, throughout the Arctic, even the warm air masses that penetrate the region from Southern Canada are subjected to the cooling effects of large surfaces of ice-cold water. Evaporation from the exposed water areas and saturated ground surfaces produces a further cooling of the air masses. At the same time the additional moisture supplied to the air permits formation of extensive low-lying cloud layers, which in turn reflect much of the incoming radiation from the sun back into space.

Mean daily temperatures are quite uniform at about 40°F over the whole range of Arctic latitudes and exceed this value only over the larger southern islands and the Arctic mainland. Comparable July values for cities in Southern Canada are: Vancouver 64°F, Winnipeg 68°F and Montreal 71°F. At coastal locations temperatures may be expected to drop to within a few degrees of the freezing point whenever onshore winds occur, although when winds are off the land 45°F to 50°F readings are more likely. Temperatures have reached 90°F at such mainland settlements as Aklavik, Coppermine and Fort Chimo. Over the islands of the Archipelago, however, extreme maximum temperatures are not as high and range from 75°F in the south to mid-60° readings in the north.

With the exception of the southeastern Baffin Island-Hudson Strait area, where small amounts of rain or freezing rain may occur in almost any month, rainfall over the Canadian

Arctic is generally confined to the months June to September. July and August are usually the wettest months of the year with monthly rainfall totals of two inches in southern sections, decreasing northward to less than one inch over the Queen Elizabeth Islands. Snow may occur in either of these months but in most lowland areas falls are light. Although precipitation is closely related to cyclonic activity, topography is particularly important in the eastern Arctic. Windward slopes have considerably more cloudiness and precipitation than lee areas. Cumulus clouds occur in inland areas but only rarely reach the thunderstorm stage.

Despite the fact that average rainfall amounts are low, heavy rains have been reported at many Arctic locations. Several stations measured one-day rainfall of more than one inch in August 1960. In the barren, permanently frozen areas of the Arctic, rainfall of this intensity may lead to locally severe run-off, particularly in rolling or mountainous terrain.

Since aviation plays such a prominent role in Arctic development, the banks of low clouds and fog which frequent the coastlines and threaten the airports have a special significance. Stations along Hudson Strait have the greatest number of days with fog at this time, with Resolution Island reporting fog on one of every two days. At most Arctic stations, with the exception of mainland and sheltered island locations, fogs usually occur on six to eight days of each of these months. At Resolute, Mould Bay and Isachsen and at most other coastal stations, cloud ceilings are below 1,000 feet and/or visibilities below three miles about 30 p.c. of the time during this period.

**The Climate—September to November.**—Dwindling hours of daylight in September give notice of the imminent return of cold weather to the Arctic. Over the Queen Elizabeth Islands, mean daily temperatures are below 32°F by the beginning of September and by the end of the month temperatures throughout the Arctic are below freezing. Below zero readings prevail in northern sections by mid-October and in all areas except the shorelines of Hudson Strait by mid-November. Extreme minimum temperatures as low as -15°F have been reported in September at the high Arctic stations of Alert, Isachsen and Mould Bay. More southerly Arctic locations do not have such low values until October.

This period is the stormiest of the year in the Arctic. Low pressure areas continue to move through the region but each is followed by a progressively colder outbreak of air from the Polar seas. The greater portion of the 20-to-50-inch annual snowfall occurs during these months. Turbulence and rather severe icing may be encountered by aircraft flying in the low-lying clouds. While fogs are less frequent than in July or August, visibilities are lowered appreciably in snow storms. As ice-cover increases in the seas and bays and open water is no longer a major cloud-producing factor, the region takes on the very cold, relatively clear climate generally associated with the Arctic night. Freeze-over of most of the northern waterways is usually accomplished by November but in the southern Arctic open water has considerable influence until December.

During this period, air operations and, to a lesser extent, ground travel are frequently hampered by the "Arctic white-out", a condition that occurs when diffuse white clouds blend, without a recognizable horizon, into the shadowless, snow-covered landscape. With no sharp landmarks on the horizon, judgment of distances becomes very difficult. White-outs are not confined to this period, however, as they often occur in April or May as well.

In summary, the Canadian Arctic experiences a continental climate during more than seven months, while maritime influences predominate in most areas during the remainder

of the year. Winters are long and extremely cold, and during the warmest month of the year average temperatures are below 50°F. On an annual basis, the region is much colder than any other part of Canada and precipitation totals are very low.

### Climatic Tables

The following tables contain climatic data for those stations in the Canadian Arctic that were in operation during the full decade 1951-60. They consist primarily of monthly temperature, precipitation and wind data.\* Statistics are not included for DEW Line observing sites since they have only a short period of record within the 1951-60 decade. For the same reason, short-period climatic data obtained by recent research expeditions to the Barnes Ice-Cap on Baffin Island, Lake Hazen and the Gilman Glacier on Ellesmere Island, Devon Island, Axel Heiberg Island, Meighen Island and Ward Hunt Island are not listed.

#### AIR TEMPERATURE

All temperatures are given in degrees Fahrenheit. To obtain representative and comparable observations, all stations are equipped with standard louvered shelters in which self-registering mercury maximum and spirit minimum thermometers are housed. The mean air temperature data have been derived mainly from records for the decade 1951-60. The "highest recorded" and "lowest recorded" temperatures refer to the absolute extremes for the entire period of observation at each station.

#### PRECIPITATION

Rainfall and precipitation averages are given in hundredths of inches; mean snowfall amounts are listed in tenths of inches; precipitation is the sum of rainfall plus the water equivalent (one tenth) of the snowfall.

#### WIND

Wind data have been obtained from anemometers with continuously recording anemographs. The most prevalent directions and average wind speeds have been derived from the hourly wind data.

#### HEATING FACTOR (DEGREE-DAYS)

Below 65°F—one degree-day results for each degree that the mean daily temperature is below the base of 65°F.

## Section 2.—Meteorological Observing Stations

In January 1966, official meteorological observations were taken and recorded at 2,313 weather reporting stations in Canada. There are several different classes of stations ranging from the first-order reporting stations at airports where hourly observations of all aspects of the weather are recorded, to the co-operative observing stations where a volunteer observer makes daily observations of rainfall, snowfall and temperature or precipitation only. While there are vast areas of the country where the weather stations are several hundred miles apart, most of the settled parts of the country are represented by first-order hourly reporting stations every 100 miles or so, and by co-operative climatological observing stations at least every 25 miles.

At most of the 274 first-order synoptic stations complete weather observations are made every six hours and at a large percentage of them only slightly less complete observations for aviation forecasts are made every hour. These weather data, including information on temperature, precipitation, pressure, wind, humidity, cloud and visibility, are sent first by radio and teletype to the different weather offices across the Continent to be used for weather forecasting purposes, and then at each month-end the manuscript reports are sent by mail to Meteorological Branch Headquarters for use in compiling climatic statistics. At 101 of these observing stations, personnel of the Telecommunications Branch of the Department of Transport take weather observations as part of their scheduled duties, and 28 stations are operated in a similar manner by the different Armed Services; 93 stations are operated by Meteorological Branch personnel and the remainder are operated under contract, or by co-operative arrangement with various transportation and communications companies.

A specially designed transport aircraft, recently placed in service by the Basic Weather Division of the Meteorological Branch, Department of Transport, is opening a new era in air reconnaissance of ice conditions in the Arctic; the aircraft, with another to be added later, will place Canada in the forefront in this field.

The Canadian project is being undertaken with a view to improving summer navigation in the Arctic, winter navigation on the St. Lawrence River and Gulf, and Great Lakes navigation during freeze-up.

Twice daily, at 34 locations throughout the country, complete upper air observations are made from the surface to altitudes upwards to 100,000 feet. Pressure, temperature and humidity measurements are determined by radiosonde instruments carried aloft by balloons and the information reported by radio to the ground receiving stations; winds are determined by observing the drift of the balloon by means of radar or radio direction finding ground equipment. There are also 30 locations where the winds in the lower layers of the atmosphere are determined by observing free balloon drift by means of a theodolite or by radar. As in the case of the first-order synoptic reporting stations, these upper air weather observations are made available immediately to forecast offices for weather forecasting purposes, and the manuscript reports are collected at Meteorological Branch Headquarters for compilation of climatic statistics.

There are 1,366 weather observing stations in Canada classified as climatological stations where the observers record temperature extremes and precipitation once or twice daily and send in monthly data sheets. Most of the observers serve on a voluntary basis and willingly spend several hours a month on their hobby. In addition, many governmental and industrial organizations such as agricultural experimental farms and power companies have incorporated brief climatological duties into the general work of some of their employees. These climatological stations have contributed much useful information on temperature and precipitation for publication by the Meteorological Branch.

There are 574 stations classified as precipitation stations where rainfall and snowfall only are observed and recorded. Since precipitation varies more rapidly than temperature over short distances, a dense network of these stations is required, especially in large urban areas. Finally, there are 99 miscellaneous stations where observations of wind, sunshine and temperature are taken for special purposes. In all, the number of weather stations in Canada has been growing at an average rate of more than 100 a year for the past decade and thus a steadily increasing climatic intelligence is assisting Canadians in all economic pursuits.

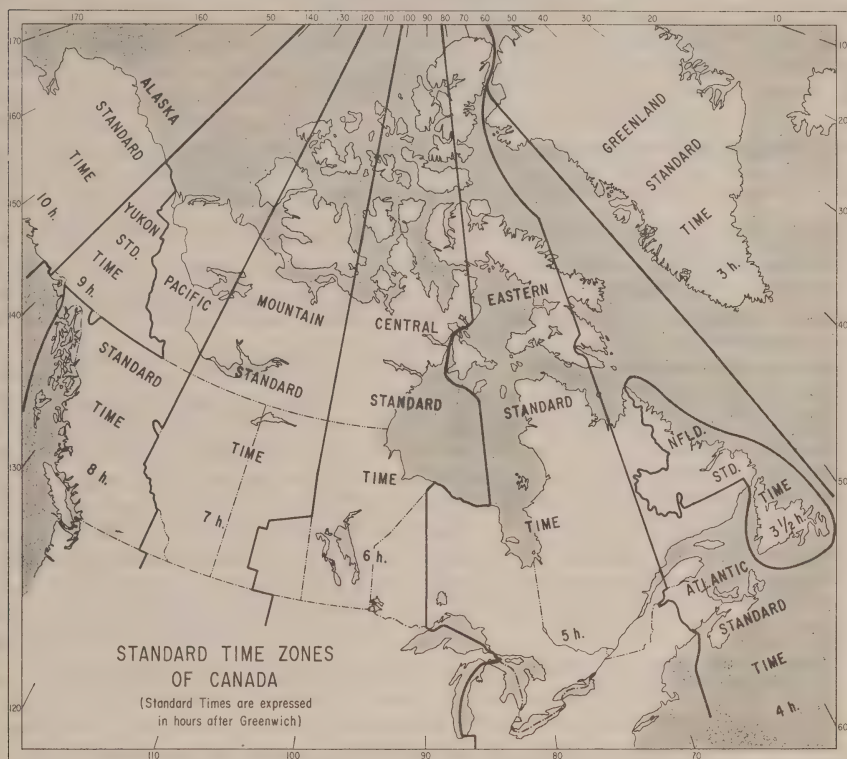

### Section 3.—Standard Time and Time Zones

Standard Time, which was adopted at a World Conference held at Washington, D.C., in 1884, sets the number of time zones in the world at 24, each zone ideally extending over one twenty-fourth of the surface of the earth and including all the territory between two meridians  $15^{\circ}$  of longitude apart. In practice, the zone boundaries are quite irregular for geographic and political reasons. Universal Time (UT) is the time of the zone centred on the zero meridian through Greenwich. Each of the other time zones is a definite number of hours ahead of or behind UT to a total of 12 hours, at which limit the international date-line runs roughly north-south through the mid-Pacific.

Canada has seven time zones, the most easterly being Newfoundland Standard Time, three hours and thirty minutes behind UT. In the west, Yukon Standard Time, which is used throughout Yukon Territory, is nine hours behind UT. In between, from east to west, the remaining zones are called Atlantic, Eastern, Central, Mountain and Pacific Standard Time.

**Legal Authority for the Time Zones.**—Time in Canada has been considered a matter of provincial rather than federal jurisdiction. Each of the provinces and the Northwest Territories has enacted laws governing the standard time to be used within its boundaries. These laws determine the location of the time zone boundaries. Lines of communication, however, have caused communities near the boundary of a time zone to adopt the time of the adjacent zone, and in most cases these changes are acknowledged by

amendments to provincial legislation. During the two World Wars, there were federal enactments concerning time but these were of temporary duration. In 1941 the Dominion Observatory time was declared the time to be used for official purposes in Canada.

**Daylight Saving Time.**—Although Daylight Saving Time had been urged in many quarters before World War I, its first use in Canada came as a federal war measure in 1918. Today most of the provinces have legislation controlling the provincial or municipal adoption (or rejection) of Daylight Saving. In the remaining provinces it is necessary to refer to the individual municipalities to determine whether, and between what dates, Daylight Saving is adopted in any particular year.

### PART I.—CONSTITUTION OF CANADA

The Canadian federal state, which today comprises ten provinces and two vast northern territories, had its beginning one hundred years ago in the enactment (Mar. 29, 1867) by the British Parliament of the British North America Act, 1867. Fashioned largely out of the Seventy-two Resolutions drafted at Quebec (1864) by the Fathers of Confederation, the British North America Act, 1867 provided for the federal union of the three British North American provinces (Canada, New Brunswick and Nova Scotia) in one Dominion under the name of "Canada".

---

\* Except where otherwise indicated, the information in this Chapter has been brought up to the date of Oct. 1, 1966. Certain changes occurring between that date and the date of going to press will be found in an Appendix to this volume. Also, official appointments made up to the date of going to press will be found in Chapter XXVII (see Index).

Although the new nation that came into being on July 1, 1867 was a federation comprised of four provinces, namely, Ontario, Quebec, New Brunswick and Nova Scotia, Sect. 146 of the Act provided for the admission into the Union of the Crown colonies of Prince Edward Island and Newfoundland on the Atlantic and the united (1866) island and mainland colony of British Columbia on the Pacific, and also of the vast expanse of Hudson's Bay Company territory in the North West known as "Rupert's Land and the North-Western Territory". Following the negotiation of an agreement on terms comprising the Company's surrender of its authority and territories to the Crown (which was to transfer them at once to Canada) and the retention of one twentieth of the land of the fertile belt (the southern territories) with designated blocks of land around its trading posts and a Canadian cash payment of £300,000, the new nation of Canada was ready to expand westward with considerable momentum across the Continent to the Pacific.

The acquisition by Canada of Rupert's Land and the North-Western Territory enabled the Red River settlement, after a few months of disturbance, to receive limited provincial establishment under the name of "Manitoba" in 1870; provided the Federal Government with the public lands needed to help subsidize a transcontinental railway linking the Pacific with the Canadian East, thereby fulfilling the pledge to British Columbia to begin the Canadian Pacific Railway within two years and to complete it within ten years of the date of union, July 20, 1871; and laid, through the provision of millions of acres of public lands, the land and economic bases for the Federal Government's adoption of a free-homestead policy for the Canadian prairies that, in conjunction with the completion of the Canadian Pacific Railway and the launching of other railway lines, brought wave after wave of settlers into the Northwest Territories in such numbers as to justify the creation of the two Provinces of Saskatchewan and Alberta in 1905 out of the portion of the Northwest Territories south of the 60th parallel of north latitude. Although provision for their entry was included in the British North America Act, 1867, the Province of Prince Edward Island held back from the Union until 1873 and Newfoundland became Canada's tenth province on Mar. 31, 1949.

The Constitution of Canada, which had a corporate beginning in 1867, combines, in a set of rules determining the creation and operation of the machinery or institutions of government, the Cabinet system of responsible government (based on an inheritance from Britain) with a Canadian adaptation of federalism (as then practised in the United States for eighty years). A written document, the British North America Act of 1867, contains a substantial portion of Canada's Constitution and this Act, with its various amendments,\* is popularly held to be the Canadian Constitution. There is, however, another and perhaps more important part which appears, through the evolutionary processes of historical growth, in various guises including well-established usages and conventions found in the unwritten provisions of the Constitution.

Thus, the British North America Act is not a comprehensive constitutional document presenting an exhaustive statement of fundamental laws and rules by which Canada is governed. The Constitution of Canada in its broadest sense includes other British statutes (such as the Statute of Westminster, 1931) and Orders in Council (notably those admitting various provinces and territories to the federation), Statutes of the Parliament of Canada relating to such matters as the succession to the Throne, the Royal Style and Titles, the Governor General, the Senate, the House of Commons, the creation of courts, the establishment of government departments, the franchise, elections, and also statutes of

\* See *A Consolidation of The British North America Acts 1867 to 1960*, consolidated by Elmer A. Driedger as of Jan. 1, 1964. Queen's Printer, Ottawa. 75 cents (Catalogue No. YX1-164). A further amendment was made in 1964 respecting old age pensions (see p. 90).

provincial legislatures relating to provincial constitutional institutions and government matters. Federal and provincial Orders in Council, legally authorized by their respective statutes, provide further constitutional material as do the decisions of the courts which interpret the British North America Act and all ordinary statutes and indeed possess the power to set aside any laws which they hold to be *ultra vires* or beyond the jurisdiction of the enacting legislative bodies, whether federal or provincial. Moreover, the Canadian Constitution comprises, in addition to the statutory law and its judicial interpretation, substantial sections of the common law, unwritten constitutional usages and conventions and principles of democratic government which were transplanted from Britain over two hundred years ago and since then have been thriving and evolving in the Canadian environment. For example, the Cabinet system of responsible government (see pp. 85-86) and its functioning through close identification of the executive and the legislative powers (that is, of the Cabinet and the House of Commons) is not mentioned in the British North America Act but derives from an unwritten convention of the Constitution.

Although the essential principles of Cabinet government are based in custom or constitutional usage, the federal structure of Canadian government rests on the explicit written provisions of the British North America Act. Apart from the creation of the federal union, the dominant feature of the Act and indeed of the Canadian federation was the distribution of powers between the central or federal government on the one hand and the component provincial governments on the other. In brief, the primary purpose was to grant to the Parliament of Canada legislative jurisdiction over all subjects of general or common interest, while giving to the provincial legislatures jurisdiction over all matters of local or particular interest (see p. 90 and pp. 105-106).

Unlike the written constitutions of many nations, the British North America Act lacks comprehensive "bill of rights" clauses, although it does accord specific constitutional protection to the use of the English and French languages (clause 133) and special safeguards with respect to sectarian or denominational schools. Such vital rights as freedom of speech, freedom of assembly, freedom of religion, freedom of the press, trial by jury and similar liberties enjoyed by the individual citizen are not recorded in the British North America Act but rather depend on the statute law and the common law inheritance. Security of these rights was confirmed by the passage of a Canadian Bill of Rights—An Act for the Recognition and Protection of Human Rights and Fundamental Freedoms (SC 1960, c. 44), assented to Aug. 10, 1960. (See also Chapter IX, Sect. 1 on Canadian Criminal Law and Procedure.)

**Treaty-Making Powers.\***—The Federal Government has exclusive responsibility for the conduct of external affairs as a matter of national policy affecting all Canadians. The policy of the Federal Government in discharging this responsibility is to seek to promote the interest of the entire country and of all Canadians of the various provinces within the over-all framework of the national policy.

In respect of matters of specific concern to the provinces of Canada, it is the policy of the Canadian Government, in a spirit of co-operative federalism, to do its utmost to assist the provinces in achieving the particular aspirations and goals that they wish to attain. The attitude of the Federal Government in this respect was illustrated by the "entente" signed by representatives of Quebec and France in the field of education in February 1965. The Quebec and federal authorities co-operated actively in a procedure

\* Extracted from "The Provinces and Treaty-Making Powers", Appendix to *Votes and Proceedings of the House of Commons of Canada*, No. 8. Apr. 26, 1965.

that enabled the Province of Quebec, within the framework of the Constitution and the national policy, to participate in international arrangements in a field of particular interest to that province.

Thus, under existing procedures, the position is that, once it is determined that what a province wishes to achieve through agreements in the field of education or in other fields of provincial jurisdiction falls within the framework of Canadian foreign policy, the provinces may discuss detailed arrangements directly with the competent authorities of the country concerned. When a formal international agreement is to be concluded, however, the federal powers relating to the signature of treaties and the conduct of over-all foreign policy must necessarily come into operation.

The approach of the Canadian Government to the question of Canadian representation in international organizations of a social, cultural or humanitarian character reflects the same constructive spirit. It recognizes the desirability of ensuring that the Canadian representation in such organizations and conferences reflects in a fair and balanced way provincial and other interests in these subjects.

**Amendment of the Constitution.**—No provision was made in the British North America Act of 1867 for amendment thereof by any legislative authority in Canada but both the Parliament of Canada and the provincial legislatures were given legislative jurisdiction with respect to some matters relating to government. Thus, for example, the Parliament of Canada was given jurisdiction with respect to the establishment of electoral districts and election laws and the privileges and immunities of Members of the House of Commons and the Senate, and each provincial legislature was empowered to amend the constitution of the province except as regards the office of Lieutenant-Governor. By an amendment to the British North America Act passed in 1949, the authority of the Parliament of Canada to legislate with respect to constitutional matters was considerably enlarged and it may now amend the Constitution of Canada except as regards the legislative authority of the provinces, the rights and privileges of provincial legislatures or governments, schools, the use of the English or the French language, and the duration of the House of Commons other than in time of real or apprehended war, invasion or insurrection.

The question of devising amendment procedure within Canada which satisfies the need to safeguard or entrench such basic provincial and minority rights as are noted immediately above and yet possesses sufficient flexibility to ensure that the Constitution can be altered to meet changing circumstances is one that still engages the attention of the federal and provincial governments and legislatures. An outline of the constitutional background to the problem, an annotated list of the fourteen occasions since 1867 when amendments to the British North America Act were made by the United Kingdom Parliament, a concise review of the prolonged search for a satisfactory amending procedure in Canada—the subject of repeated consideration in the Parliament of Canada and in a series of formal federal-provincial conferences and meetings in the years 1927, 1935-36, 1950, 1960-61 and 1964—and, more specifically, the text of a draft Bill “to provide for the amendment in Canada of the Constitution of Canada” (accompanied by explanatory notes relating thereto) which embodies the amending procedure or formula unanimously recommended by the Conference of Attorneys-General and unanimously accepted by the Conference of the Prime Minister and the Premiers (October 1964) are all made available in an official publication entitled *The Amendment of the Constitution of Canada*, authorized by the Minister of Justice, February 1965.\*

Franklin <sup>6</sup> .....	Jan. 1, 1920		549,253	
Yukon Territory <sup>8</sup> .....	June 13, 1898	Yukon Territory Act, 1898 (SC 1898, c. 6)	207,076	Whitehorse
<b>Canada.....</b>			<b>3,851,809</b>	

<sup>1</sup> The area of Ontario was extended by the Ontario Boundaries Extension Act, 1912 (SC 1912, c. 40).

<sup>2</sup> Extended by Quebec Boundaries Extension Act, 1912 (SC 1912, c. 45) and diminished Mar. 1, 1927 in consequence of the Award of the Judicial Committee of the British Privy Council whereby approximately 112,000 sq. miles of territory (formerly considered as part of Quebec) was assigned to Newfoundland.

<sup>3</sup> Extended by the Extension of Boundaries Act of Manitoba, 1881 and the Manitoba Boundaries Extension Act, 1912 (SC 1912, c. 32).

<sup>4</sup> Saskatchewan and Alberta created as provinces in 1905 from the area formerly comprised in the provisional districts of Assiniboia, Athabaska, Alberta and Saskatchewan established May 17, 1882 by minute of Canadian Privy Council concurred in by Dominion Parliament and Order in Council, Oct. 2, 1895.

<sup>5</sup> By an Imperial Order in Council passed on June 23, 1870 pursuant to the Rupert's Land Act, 1868 (Br. Stat. 1868, c. 105), the former territories of the Hudson's Bay Company known as Rupert's Land and the North-Western Territory were transferred to Canada effective July 15, 1870. These territories were designated as the North-West Territories by the Act of SC 1869, c. 3 and as the Northwest Territories by RSC 1906, c. 62. By Imperial Order in Council of July 31, 1880 (effective Sept. 1, 1880), all British territories and possessions in North America not already included within Canada and all islands adjacent thereto (with the exception of the Colony of Newfoundland and its dependencies) were annexed to Canada and these additional territories were formally included in the North-West Territories by SC 1905, c. 27. The Province of Manitoba was formed out of a portion of the territories by the Manitoba Act, 1870 (SC 1870, c. 3) and a further portion was added to Manitoba in 1881 by SC 1881, c. 14. The Provinces of Alberta and Saskatchewan were formed out of portions of the territories in 1905 and in 1912 other portions were added to Manitoba, Ontario and Quebec.

<sup>6</sup> By SC 1876, c. 21, a separate district to be known as the District of Keewatin was established and provision was made for the local government thereof. The Act was expressed to come into force by proclamation. It provided that portions of the District might be re-annexed to the North-West Territories by proclamation; in 1886 a portion of the District of Keewatin was re-annexed and in 1905 the entire Keewatin District was re-annexed. The Act of 1876 was never proclaimed. By Order in Council of May 8, 1882 the provisional districts of Assiniboia, Saskatchewan, Alberta and Athabaska were created for the convenience of settlers and for postal purposes. By Order in Council of Oct. 2, 1895 the further provisional districts of Ungava, Franklin, Mackenzie and Yukon were created. The boundaries of these provisional districts were re-defined by Order in Council of Dec. 18, 1897. Subsequently the Yukon Territory was formed, the Provinces of Alberta and Saskatchewan were created and other portions of the territories were annexed to Quebec, Ontario and Manitoba. By Order in Council dated Mar. 16, 1918 (effective Jan. 1, 1920) the remaining portions of the Northwest Territories were divided into three provisional districts known as Mackenzie, Keewatin and Franklin.

<sup>7</sup> See pp. 118-119.

<sup>8</sup> The provisional district of Yukon established in 1895 was created a judicial district of the North-West Territories by proclamation issued pursuant to Sect. 51 of the North-West Territories Act (RSC 1886, c. 50) on Aug. 16, 1897 and by the Yukon Territory Act (SC 1898, c. 6) was declared to be a separate Territory.

Wellington Street in central Ottawa. On the north side may be seen the new National Library, the Supreme Court and the towers of the Justice, the Confederation and the Parliament Buildings; opposite are the Trade and Commerce, Veterans Affairs and Bank of Canada buildings.

The Headquarters of the Department of National Health and Welfare is the focal building at Tunney's Pasture in west-central Ottawa, which now contains eighteen buildings of various sizes.

Part of the great complex of National Research Council buildings, east of Ottawa.

The new administration building of the Department of Agriculture in the Experimental Farm, south-central Ottawa.

Confederation Heights, south Ottawa, contains six buildings housing the Canadian Broadcasting Corporation administration, the Fisheries, Insurance and Post Office Departments, Public Works administration, the Communications Branch of the National Research Council, and other services.

FEDERAL GOVERNMENT  
BUILDINGS IN OTTAWA are quite diversified in design. The early, centrally located buildings followed the architecture or a modified version of the architecture of the Parliament Buildings. However, most Departments of Government have been re-housed within the past fifteen years and the new buildings are mainly functional in character. As the city grew in size and traffic became a problem, the centralization of Departments was considered impracticable and the buildings of recent construction are grouped in areas scattered throughout the city and its environs.

## PART II.—MACHINERY OF GOVERNMENT

### Section 1.—The Federal Government

Canadian governmental machinery or institutions function through the application of the British North America Act and its amendments and those other constitutional principles and developments—both “written” and “unwritten”—that have evolved from the combination of British law and traditions with Quebec’s adherence to the French language and habits of mind, all within a New World transcontinental environment. They are classified into three branches—the Executive, the Legislature and the Judiciary—and exist for each of the three levels of government in Canada—federal, provincial and municipal—functioning within their respective jurisdictions as specified respectively by the provisions of the British North America Act and by their statutes of origin.

Despite this *division* of the Government of Canada into three separate branches, Canada’s system of responsible government was long ago evolved from the British practice of the *union* of the executive and legislative branches which is the antithesis of the United States system embodying the opposing principle of the division or *separation* of executive, legislative and judicial powers or authorities from one another. As recounted under the heading of The Cabinet (pp. 85-86), there is a close identification of the Canadian legislative and executive branches of government, with final direction and authority emanating from the former. The Prime Minister and his Cabinet, which formulates and carries out all executive policy, have seats in Parliament and are responsible at all times to the House of Commons and it is here that the *principle of the union* of powers finds its significant expression. On the other hand, the guarantee of the independence of the judiciary, whose superior court judges are appointed by the Governor General (in actual fact by the Prime Minister), is ensured in the constitutional provision that they shall hold office during good behaviour and can be removed by the Governor General only after a joint address of both Houses of Parliament; in this guarantee is found a limited acceptance of the principle of separation of powers, for judges cannot be removed because their decisions happen to be disliked by the Cabinet, by Parliament, or by the people; they can conscientiously perform their judicial functions without fear or intimidation.

In addition to the political institutions embraced by the executive and legislative branches, the machinery of the government at the federal level includes the non-political public service consisting of employees of the state organized in 24 departments of government, some two dozen special boards and commissions, and about 45 Crown corporations or other agencies engaged in administering various public services under their respective statutes and ultimately accountable, through a Minister, to Parliament. Part III of this Chapter recounts briefly the administrative functions of the Federal Government under four Sections, the first three describing the financial administration of the Government of Canada, the functions of each department, board, commission, and of each Crown corporation (whether classified as departmental, agency or proprietary under the Financial Administration Act) and the fourth listing the principal Acts of Parliament grouped according to the department charged with the administration thereof.

The changing demands on government in this technical age with respect to economic planning, social adjustment and individual welfare were reflected recently in a major reorganization of the administrative responsibilities of the Government of Canada. Although many of the features of this reorganization were first announced in a background statement by the Prime Minister on Dec. 17, 1965 and certain of the immediate objectives with respect to the transfer of duties and responsibilities from one Minister and Department to another were implemented through Orders in Council (published in the *Canada Gazette* of Jan. 12, 1966) under the Public Service Rearrangement and Transfer of Duties Act, the establishment of new Departments and the altering of the names of others required legislative enactment. To this end, the Government Organization Bill (No. C-178), was passed by the Commons on June 6, 1966 and received Royal Assent on June 16, 1966. The Act (SC 1966, c. 25), proclaimed in effect as of Oct. 1, 1966, authorizes the establish-

ment of the Departments of the Solicitor General of Canada, the Registrar General of Canada, Indian Affairs and Northern Development, Manpower and Immigration, Energy, Mines and Resources, and Forestry and Rural Development, and of the office of President of the Treasury Board; the establishment of the offices of Ministers of these Departments and the designation of their respective powers, duties and functions; and the appointment of deputy heads of the new Departments and other officers, employees, etc. These numerous changes in government organization and the delineation of the respective policies and administrative functions of the Ministers and their Departments are outlined at pp. 130-150 and presented visually in the accompanying government organization chart.

### Subsection 1.—The Executive

**The Crown.**—The British North America Act of 1867 (Sect. 9) provides that "the Executive Government and authority of and over Canada is . . . vested in the Queen". The functions of the Crown, which are substantially the same as those of The Queen in relation to the British Government, are discharged in Canada by the Governor General in accordance with established principles of responsible government.

**The Queen.**—The personal participation of The Queen in the functions of the Crown in Canada has been limited to such occasions as the granting of honours and awards, approval of changes in the Table of Precedence, institution of new military awards, or the periodic appointment of a Governor General. On the occasion of a royal visit, The Queen may participate in those ceremonies that otherwise are carried out in her name, such as the opening and dissolution of Parliament, the assent to Bills and the granting of a general amnesty.

Apart from her constitutional position in relation to the various governments of the Commonwealth countries, The Queen is Head of the Commonwealth and symbolizes the association of the member countries. Until 1953 the title of The Queen was the same throughout the Commonwealth. Constitutional developments put the title somewhat out of accord with the facts of the position, and in December 1952 it was decided by the Prime Ministers of the Commonwealth countries meeting at London, England, that new forms of title for each country should be devised. The title for Canada was approved by Parliament and established by a Royal Proclamation on May 28, 1953. The title of The Queen, as far as Canada is concerned, now is:—

"Elizabeth the Second, by the Grace of God of the United Kingdom, Canada and Her other Realms and Territories Queen, Head of the Commonwealth, Defender of the Faith".

### 1.—Sovereigns of Canada since Confederation, 1867

Name	Dynasty	Year of Birth	Date of Accession
Victoria.....	House of Hanover.....	1819	June 20, 1837
Edward VII.....	House of Saxe-Coburg and Gotha.....	1841	Jan. 22, 1901
George V.....	House of Windsor.....	1865	May 6, 1910
Edward VIII.....	House of Windsor.....	1894	Jan. 20, 1936
George VI.....	House of Windsor.....	1895	Dec. 11, 1936
Elizabeth II.....	House of Windsor.....	1926	Feb. 6, 1952

**The Governor General.**—The Governor General, appointed by The Queen as her personal representative in Canada on the advice of the Prime Minister of Canada, traditionally serves for a term of five years. He exercises the executive authority of The Queen in relation to the Government of Canada under Letters Patent issued under the Great Seal of Canada (revised and re-issued, effective Oct. 1, 1947) and the provisions of the British North America Acts, 1867 to 1964. Acting under the recommendations of his responsible Ministers, in The Queen's name, he summons, prorogues and dissolves Parliament, assents to Bills, and exercises other executive functions.

The Governor General's annual salary and allowances provided by the Parliament of Canada are \$48,666 and \$72,000, respectively. Office expenses and certain other items of expenditure are provided for in the estimates for the Office of the Secretary to the Governor General.

The present Governor General is styled His Excellency General The Right Honourable Georges P. Vanier, D.S.O., M.C., C.D.

## 2.—Governors General of Canada since Confederation, 1867

Name	Date of Appointment	Date of Assumption of Office
THE VISCOUNT MONCK OF BALLYTRAMMON.....	June 1, 1867	July 1, 1867
THE BARON LISGAR OF LISGAR AND BAILIEBOROUGH.....	Dec. 29, 1868	Feb. 2, 1869
THE EARL OF DUFFERIN.....	May 22, 1872	June 25, 1872
THE MARQUIS OF LORNE.....	Oct. 5, 1878	Nov. 25, 1878
THE MARQUIS OF LANSDOWNE.....	Aug. 18, 1883	Oct. 23, 1883
THE BARON STANLEY OF PRESTON.....	May 1, 1888	June 11, 1888
THE EARL OF ABERDEEN.....	May 22, 1893	Sept. 18, 1893
THE EARL OF MINTO.....	July 30, 1898	Nov. 12, 1898
THE EARL GREY.....	Sept. 26, 1904	Dec. 10, 1904
FIELD MARSHAL H. R. H. THE DUKE OF CONNAUGHT.....	Mar. 21, 1911	Oct. 13, 1911
THE DUKE OF DEVONSHIRE.....	Aug. 19, 1916	Nov. 11, 1916
GENERAL THE BARON BYNG OF VIMY.....	Aug. 2, 1921	Aug. 11, 1921
THE VISCOUNT WILLINGDON OF RATTON.....	Aug. 5, 1926	Oct. 2, 1926
THE EARL OF BESSBOROUGH.....	Feb. 9, 1931	Apr. 4, 1931
THE BARON TWEEDSMUIR OF ELSFIELD.....	Aug. 10, 1935	Nov. 2, 1935
MAJOR GENERAL THE EARL OF ATHLONE.....	Apr. 3, 1940	June 21, 1940
FIELD MARSHAL THE VISCOUNT ALEXANDER OF TUNIS.....	Mar. 21, 1946	Apr. 12, 1946
THE RIGHT HONOURABLE VINCENT MASSEY.....	Jan. 24, 1952	Feb. 28, 1952
GENERAL THE RIGHT HONOURABLE GEORGES P. VANIER.....	Aug. 1, 1959	Sept. 15, 1959

**The Cabinet.**—The Cabinet is a committee of Ministers chosen by the Prime Minister (the leader of the political party forming the Government of the Day) generally from Members of Parliament. By convention, all members of the Cabinet either have seats in Parliament or secure seats within a short time and, again by convention, all Ministers in charge of departments of government are generally Members of the House of Commons although there is nothing in the Constitution to prevent a Minister with Portfolio being a Senator.\* However, they generally prefer to have seats in the House of Commons where all crucial legislation, by convention, is introduced and where they can offer explanations necessary to secure passage of their Estimates or legislation with which they are deeply concerned. Ministers without Portfolio (without a department to administer) can be members of either the House of Commons or the Senate. Frequently the Cabinet contains one Minister without Portfolio—usually the Leader of the Government in the Senate—and perhaps one or two others chosen for a variety of reasons such as the desirability of including certain provincial or sectional representation that might otherwise be lacking in the Ministry.

Cabinet members are selected by the Prime Minister in such manner as to ensure, as far as possible, representation of the several geographical and political regions of the country and its principal ethnic, religious and social interests. Each Cabinet Minister generally assumes charge of one of the departments of government, although a Minister may hold more than one portfolio at the same time or he may hold one or more portfolios and one or more acting portfolios, or a Minister without Portfolio may hold one or more acting portfolios. In his acting capacity, the Minister exercises the same authority as if he were the Minister of the department.

The position of Prime Minister, the keystone of the Cabinet, is one of exceptional authority. He alone makes recommendations on the dissolution and convocation of Parliament, appointment of Privy Councillors, Cabinet Ministers, Lieutenant-Governors,

\* Senator the Hon. Gideon Decker Robertson held the portfolio of Minister of Labour for the periods Nov. 7, 1918 to Dec. 29, 1921 and Aug. 7, 1930 to Feb. 2, 1932; Senator the Hon. Malcolm Wallace McCutcheon served as Minister of Trade and Commerce from Feb. 12 to Apr. 22, 1963.

Chief Justices, Senators, Speakers of the Senate and House of Commons, and Deputy Heads of departments. The Cabinet, under his leadership, directs the business of the Commons, initiates nearly all public Bills placed before Parliament, and has complete responsibility for the initiation of taxes and the recommendation of expenditures. Following established precedent or convention, it is always responsible to the Commons. When the Cabinet (the Government) suffers defeat on a Government Bill or a vote of censure or on a motion of want of confidence in the Commons, the existing Government or Cabinet must either resign or request a dissolution from the Governor General. If it resigns, the Governor General may call on the Leader of the Opposition in the Commons to form a new Government. Alternatively, if a Government that has been defeated in the House is granted a dissolution and is defeated in the ensuing general election, then, should no clear majority be indicated, the Government may decide (1) to remain in office and seek a vote of confidence in the House when it meets or (2) to resign immediately with the consequent result that the Governor General will ask the leader of the party with the highest number of members returned to form a new Government. These alternatives may also eventuate as a result of a general election subsequent to the normal dissolution of Parliament at or near the close of its statutory life.

The primary responsibility of the Governor General in either of the above circumstances is to provide the nation with a Cabinet or Ministry capable of conducting Her Majesty's Government with the support of the House of Commons.

The Prime Ministers since Confederation are listed in Table 3 and the members of the Ministry as at Oct. 1, 1966 in Table 4. Sessional and other allowances received by Cabinet Ministers are given at pp. 100-101.

**3.—Prime Ministers since Confederation, 1867**

Ministry	Prime Minister	Length of Administration
1	Rt. Hon. Sir JOHN ALEXANDER MACDONALD.....	July 1, 1867 — Nov. 5, 1873
2	Hon. ALEXANDER MACKENZIE.....	Nov. 7, 1873 — Oct. 16, 1878
3	Rt. Hon. Sir JOHN ALEXANDER MACDONALD.....	Oct. 17, 1878 — June 6, 1891
4	Hon. Sir JOHN JOSEPH CALDWELL ABBOTT.....	June 16, 1891 — Nov. 24, 1892
5	Rt. Hon. Sir JOHN SPARROW DAVID THOMPSON.....	Dec. 5, 1892 — Dec. 12, 1894
6	Hon. Sir MACKENZIE BOWELL.....	Dec. 21, 1894 — Apr. 27, 1896
7	Rt. Hon. Sir CHARLES TUPPER.....	May 1, 1896 — July 8, 1896
8	Rt. Hon. Sir WILFRID LAURIER.....	July 11, 1896 — Oct. 6, 1911
9	Rt. Hon. Sir ROBERT LAIRD BORDEN.....	Oct. 10, 1911 — Oct. 12, 1917 (Conservative Administration)
10	Rt. Hon. Sir ROBERT LAIRD BORDEN.....	Oct. 12, 1917 — July 10, 1920 (Unionist Administration)

Member of the Administration.....	Hon. JOHN NAPIER TURNER.....	Dec. 17, 1965	Dec. 17, 1965

<sup>1</sup> Changes occurring between Oct. 1, 1966 and the date of going to press will be carried in an Appendix to this volume.

**Parliamentary Secretaries.**—The Parliamentary Secretaries Act (SC 1959, c. 15), assented to June 4, 1959, provides for the appointment of 16 Parliamentary Secretaries from among the Members of the House of Commons to assist the respective Ministers in such manner as each Minister may direct. The Government thus revived the system of parliamentary assistantships in practice during the World War II and postwar years subsequent to 1943, whereby Cabinet Ministers might receive assistance in the performance of their parliamentary functions and promising Members of the House might secure a degree of apprenticeship for higher public office. Parliamentary Secretaries hold office for 12 months.

At Oct. 1, 1966, the following Parliamentary Secretaries were in office:—

<u>Secretary</u>	<u>Minister</u>
JOHN MATHESON.....	Prime Minister Agriculture Manpower and Immigration External Affairs Finance and Receiver General Fisheries Labour Energy, Mines and Resources National Health and Welfare National Revenue and President of the Treasury Board Indian Affairs and Northern Development Public Works Secretary of State Trade and Commerce Transport
PIERRE ELLIOT TRUDEAU.....	
BRUCE S. BEER.....	
JOHN C. MUNRO.....	
DONALD S. MACDONALD.....	
J.-J. JEAN CHRÉTIEN.....	
RICHARD CASHIN.....	
BRYCE S. MACKASEY.....	
JACK DAVIS.....	
MARGARET RIDEOUT.....	
JAMES E. WALKER.....	
STANLEY HADASZ.....	
JOHN B. STEWART.....	
ALBERT BÉCHARD.....	
JEAN-CHARLES CANTIN.....	
JAMES A. BYRNE.....	

**The Privy Council.**—The British North America Act of 1867 (Sect. 11) provides for "a Council to aid and advise in the Government of Canada, to be styled the Queen's Privy Council for Canada . . .". At present it consists of about 115 members sworn of the Council by the Governor General on the advice of the Prime Minister. Membership in the Privy Council is for life so that Privy Councillors include both former and present Ministers of the Crown as well as a number of persons who have been, from time to time as an honour, sworn as Privy Councillors; these include members of the Royal Family, past and present Commonwealth Prime Ministers, and former Speakers of the Senate and of the House of Commons of Canada. The Council seldom meets as a body and its constitutional responsibilities as adviser to the Crown in respect to Canada are performed exclusively by a Committee; the membership thereof, with a few historical exceptions, is identical to that of the Cabinet of the Day. A clear distinction between the functions of the Committee of the Privy Council and the Cabinet is rarely made and actually the terms "Council" and "Cabinet" are commonly employed as synonyms.

### 5.—Members of the Queen's Privy Council for Canada According to Seniority Therein, as at Oct. 1, 1966

President of the Privy Council, . . . . . Hon. GUY FAVREAU

Clerk of the Privy Council and Secretary to the Cabinet, . . . . . R. G. ROBERTSON

NOTE.—In this list the prefix "Rt. Hon." indicates membership in the British Privy Council.

Member <sup>1</sup>	Date When Sworn In	Member <sup>1</sup>	Date When Sworn In
Hon. THOMAS ALEXANDER CRERAR . . . . .	Oct. 12, 1917	Hon. DONALD METHUEN FLEMING . . . . .	June 21, 1957

<sup>1</sup> The ordinary legal limit of duration for each Parliament is five years. <sup>2</sup> Duration of Parliament in years, months and days. The life of a Parliament is counted from the date of return of election writs to the date of dissolution, both days inclusive (BNA Act, Sect. 50). <sup>3</sup> Date of general election. <sup>4</sup> Writs returnable. <sup>5</sup> Dissolution of Parliament. <sup>6</sup> Includes long adjournment from Nov. 29, 1956 to Jan. 8, 1957. <sup>7</sup> Includes long adjournment from July 13 to Sept. 7, 1961. <sup>8</sup> Government defeated in House of Commons on want of confidence motion. <sup>9</sup> Includes long adjournment from Aug. 2 to Sept. 30, 1963. <sup>10</sup> Includes long adjournment from Dec. 18, 1964 to Feb. 16, 1965. <sup>11</sup> House adjourned on June 30 until Sept. 27 but dissolved on Sept. 8, 1965. <sup>12</sup> Includes long adjournment from June 30 to Sept. 27, superseded by dissolution on Sept. 8, 1965.

### Subsection 2.—The Legislature

The federal legislative authority is vested in the Parliament of Canada consisting of The Queen, an Upper House styled the Senate, and the House of Commons. Bills may originate in either the Senate or the House subject to the provisions of Sect. 53 of the British North America Act, 1867, which provides that Bills for the appropriation of any part of the public revenue or the imposition of any tax or impost shall originate in the House of Commons. Bills must pass both Houses and receive Royal Assent before becoming law. In practice most public Bills originate in the House of Commons, although there has been a marked increase recently in the introduction of public Bills in the Senate, at the instance of the Government, in order that Bills may be dealt with in the Senate while the Commons is engaged in other matters such as the debate on the Speech from the Throne. Private Bills usually originate in the Senate. The Senate may delay, amend or even refuse to pass Bills sent to it from the Commons, but differences are usually settled without serious conflict. (See Chap. XXVII for current legislation.)

Under Sect. 91 of the British North America Acts, 1867 to 1964, the legislative authority of the Parliament of Canada extends to the following: the amendment of the Constitution of Canada (subject to certain exceptions—see p. 81); the public debt and property; the regulation of trade and commerce; unemployment insurance; the raising of money by any mode or system of taxation; the borrowing of money on the public credit; postal service; the Census and statistics; militia, military and naval service, and defence; the fixing of and providing for the salaries and allowances of civil and other officers of the Government of Canada; beacons, buoys, lighthouses and Sable Island; navigation and shipping; quarantine and the establishment and maintenance of marine hospitals; sea coast and inland fisheries; ferries between a province and any British or foreign country or between two provinces; currency and coinage, banking, incorporation of banks and the issue of paper money; savings banks; weights and measures; bills of exchange and promissory notes; interest; legal tender; bankruptcy and insolvency; patents of invention and discovery; copyrights; Indians and lands reserved for the Indians; naturalization and aliens; marriage and divorce; the criminal law, except the constitution of courts of criminal jurisdiction, but including the procedure in criminal matters; the establishment, maintenance and management of penitentiaries; such classes of subjects as are expressly excepted in the enumeration of the classes of subjects by these Acts assigned exclusively to the legislatures of the provinces.

Under Sect. 95, the Parliament of Canada may make laws in relation to agriculture and immigration concurrently with provincial legislatures although federal legislation is paramount in the event of conflict. By the British North America Act, 1951 (Br. Stat. 1950-51, c. 32) it is declared that the Parliament of Canada may make laws in relation to old age pensions in Canada but no such law shall affect the operation of any provincial laws in relation to old age pensions. By the British North America Act, 1964, which received Royal Assent on July 31, 1964, this amendment was extended, at the request of the Parliament of Canada (June 19, 1964) to permit the payment of supplementary benefits, including survivors' and disability benefits irrespective of age, under a contributory pension plan.

**The Senate.**—From an original membership of 72 at Confederation, the Senate, through the addition of new provinces and the general growth of population, now has 102 members, the latest change in representation having been made on the admission of Newfoundland to Confederation in 1949. The growth of representation in the Senate is summarized by province in Table 7.

Senators are appointed by the Governor General by instrument under the Great Seal of Canada. The actual power of appointing Senators resides by constitutional usage in the Prime Minister whose advice the Governor General accepts in this regard. Until the passage of "An Act to make provision for the retirement of members of the Senate" (SC

1965, c. 4), assented to on June 2, 1965, Senators were appointed for life; that Act fixes at 75 years the age at which any person appointed to the Senate after the coming into force of the Bill will cease to hold his place in the Senate.

In each of the four main divisions of Canada, except Quebec, Senators represent the whole of the province for which they are appointed; in Quebec one Senator is appointed for each of the 24 electoral divisions of what was formerly Lower Canada. The deliberations of the Senate are presided over by a Speaker appointed by the Governor General in Council (in effect by the Government) and government business in the Senate is sponsored by the Government Leader in the Senate.

The Senate is not a competitor of the House of Commons in the field of legislation but, in the main, acts as a second chamber giving further scrutiny to legislation initiated in the House of Commons. Under the Constitution, Bills for appropriating any part of the public revenue or for imposing a tax or impost must originate in the Commons but in every other respect, since both Houses must concur in every piece of legislation, the Senate has an equal voice with the House of Commons.

**The House of Commons.**—The British North America Act, 1867 provided that in respect of representation in the House of Commons the Province of Quebec should have the fixed number of sixty-five members and that there should be assigned to each of the other provinces such a number of members as would bear the same proportion to the number of its population as the number sixty-five bears to the number of the population of Quebec. This Act also provided that on the completion of a census in 1871 and of each subsequent decennial census the representation of the several provinces should be re-adjusted provided the proportionate representation of the provinces as prescribed by the Act were not thereby disturbed.

In the session of 1946 the House of Commons adopted a resolution stating that the effect of the provisions of the British North America Act relating to representation had not been satisfactory in that proportionate representation of the provinces according to population had not been maintained and that a more equitable apportionment of members to the various provinces could be effected if readjustments were made on the basis of the population of all the provinces taken as a whole. The Act was amended accordingly in

1946 to provide a new rule to regulate representation in the House of Commons. Generally speaking, representation was fixed as follows:—

The membership assigned to each province shall be computed by dividing the total population of the provinces by two hundred and fifty-four and by dividing the population of each province by the quotient so obtained.

This rule, employed in the redistribution of representation made in 1947, was effective in the General Election of 1949.

After the completion of the 1951 Census it was apparent that, as a result of a wartime shift of population, a substantial reduction in the representation of the Province of Saskatchewan would ensue under the rules then regulating representation. Accordingly, in an effort to eliminate sharp reductions in provincial representation from one census to another, the British North America Act was again amended (RSC 1952, c. 304, Sect. 51) (see Canada Year Book 1963-64, p. 75) to ensure that the representation of any province should not be reduced by more than 15 p.c. at any one readjustment, subject however to the qualification that the effect of the rule should not be to make the representation of a province with a smaller population greater than any province with a larger population.

Subsequently in 1952, Parliament enacted RSC 1952, c. 334, effective in the General Election of 1953 and in each successive General Election down to that of the Twenty-seventh Parliament (Nov. 8, 1965), which provided that representation in the House of Commons should be on the following basis:—

“Sect. 2.—Eighty-five members of the House of Commons shall be elected for the Province of Ontario, seventy-five for the Province of Quebec, twelve for the Province of Nova Scotia, ten for the Province of New Brunswick, fourteen for the Province of Manitoba, twenty-two for the Province of British Columbia, four for the Province of Prince Edward Island, seventeen for the Province of Saskatchewan, seventeen for the Province of Alberta, seven for the Province of Newfoundland, one for the Yukon Territory and one for Mackenzie district of the Northwest Territories, thus making a total of two hundred and sixty-five members.”

The number of representatives of each province elected at each of the 27 General Elections since Confederation is given in Table 9.

<sup>1</sup> Northwest Territories in 1963 and 1965.

The Representation Commissioner Act setting up the office and duties of the Representation Commissioner was given Royal Assent on Dec. 21, 1963. The Electoral Boundaries Readjustment Act providing for the establishment of Electoral Boundaries

Commissions to report upon and to provide for the readjustment of the representation of the provinces in the House of Commons in accordance with the findings of the 1961 Census of population was given Royal Assent on Nov. 20, 1964.

Pursuant to Sect. 11 of the Electoral Boundaries Readjustment Act, the Dominion Statistician sent to the Representation Commissioner a certified return showing the population of Canada and of each of the provinces and the population of Canada by electoral districts as ascertained by the 1961 Census. The Representation Commissioner calculated the number of members of the House of Commons to be assigned to each of the provinces subject and according to the provisions of Sect. 51 of the British North America Act, 1867, and the rules provided therein. He then caused a statement to be published in the *Canada Gazette* of Nov. 28, 1964, setting forth the following results:—

“Eighty-eight members of the House of Commons shall be elected for the Province of Ontario, seventy-four for the Province of Quebec, eleven for the Province of Nova Scotia, ten for the Province of New Brunswick, thirteen for the Province of Manitoba, twenty-three for the Province of British Columbia, four for the Province of Prince Edward Island, thirteen for the Province of Saskatchewan, nineteen for the Province of Alberta and seven for the Province of Newfoundland.”

The Governor General, by proclamation published in the *Canada Gazette*, established an Electoral Boundaries Commission for each province. It was the task of each Commission to prepare, with all reasonable dispatch, a report setting forth its recommendations concerning the division of its particular province into electoral districts and the recommendations concerning the description of the boundaries of each such district and the representation and name to be given thereto. A copy of the 1961 Census return was sent to the chairman of each Commission immediately after its members were appointed.

Pursuant to Sect. 8 of the Representation Commissioner Act, maps were prepared in the office of the Representation Commissioner showing the distribution of population in each province and setting out alternative proposals respecting the boundaries of electoral districts in each province; these maps were then supplied to the respective Commissions. The Commissions complied with the procedure of the Electoral Boundaries Act and completed their reports within the time prescribed, which was one year. Two certified copies of each report were received by the Representation Commissioner; as required by Sect. 19(1) of that Act, one of these copies was transmitted to the Speaker of the House of Commons, who in turn laid it before the House of Commons.

Then followed a period of thirty days in which objections in writing, signed by no fewer than ten members of the House of Commons, were filed with the Speaker specifying the provisions of the report objected to and the reasons for the objection. A further period of 15 days was set aside in which the House of Commons was to consider the matter of the objections: this period was increased to 45 sitting days by an Act, assented to on Feb. 23, 1966, entitled “An Act to extend the time for consideration of objections pursuant to section 20 of the Electoral Boundaries Readjustment Act with respect to the reports of commissions established for the decennial census taken in the year 1961”.

Several objections were filed with the Speaker, the motions were taken up and considered and the reports referred back to the Representation Commissioner by the Speaker and then to the Commissions. On the expiration of a 30-day period for that purpose, the Commissions returned their reports with or without amendment, through the Representation Commissioner to the Speaker. Then a draft representation order was prepared by the Representation Commissioner to be transmitted to the Secretary of State. This order specified the number of members of the House of Commons who shall be elected for each of the provinces as calculated by the Representation Commissioner and, dividing each of the provinces into electoral districts, described the boundaries of each such district and specified the representation and name given thereto, in accordance with the recommendations contained in the reports. The Governor in Council, by proclamation of June 16, 1966, declared the draft representation order to be in force, effective upon the dissolution of the then-existing Parliament.

**10.—Electoral Districts, Voters on List and Votes Polled, Names and Addresses of Members of the House of Commons as Elected at the Twenty-seventh General Election, Nov. 8, 1965 and Revised to Oct. 1, 1966**

Speaker.....	Hon. LUCIEN LAMOUREUX
Prime Minister.....	Rt. Hon. LESTER B. PEARSON
Leader of the Opposition.....	Rt. Hon. JOHN G. Diefenbaker
Clerk of the House of Commons.....	LÉON J. RAYMOND

NOTE.—The vote is summarized by provinces in Table 12, p. 102. The leaders of the political parties are indicated by asterisks (\*). For Parliamentary Secretaries, see p. 87. This information, except the population of constituencies, has been supplied by the Chief Electoral Officer. Party affiliations are unofficial. <sup>1</sup> By-elections held between Oct. 1, 1966 and the date of going to press will be carried in an Appendix to this volume.

**Indemnities and Allowances.**—Members of the Senate and House of Commons receive a sessional allowance at the rate of \$12,000 per annum. In addition, for each session of Parliament, they may be paid travelling expenses between their place of residence or constituency and Ottawa as may be required for the performance of their duties as members of the Senate and House of Commons. Senators receive an annual expense allowance of \$3,000 and members of Parliament receive an expense allowance of \$6,000, neither of which is subject to income tax, and is payable quarterly. The member of the Senate occupying the recognized position as Leader of the Government in the Senate is paid, in addition to his sessional allowance, an annual allowance of \$10,000 and to the member of the Senate occupying the recognized position as Opposition Leader in the Senate there is paid, in addition to his sessional allowance, an annual allowance of \$6,000; but if the Leader of the Government is in receipt of a salary under the Salaries Act the annual allowance is not paid. The remuneration of the Prime Minister is \$25,000 a year and of a Cabinet Minister and the Leader of the Opposition in the House of Commons \$15,000 a year in addition to the sessional and expense allowances each receives as a mem-

ber of Parliament. The remuneration of a Minister without Portfolio is \$7,500 a year in addition to the sessional and expense allowances, the latter being not taxable. Additional annual allowances of \$4,000 (beyond the above-noted sessional allowance) are provided to each Leader of a Party having a recognized membership of twelve or more persons in the House of Commons other than the Prime Minister and the member occupying the recognized position as Leader of the Opposition in the House of Commons and, likewise, to the Chief Government Whip and to the Chief Opposition Whip in the House of Commons. The Speaker of the Senate and the Speaker of the House of Commons each receives, besides the sessional allowance and expense allowance, a salary of \$9,000 per annum. The Deputy Speaker of the House of Commons receives a salary of \$6,000 per annum. The Speakers of the Senate and the House of Commons are also entitled to \$3,000 in lieu of residence and the Deputy Speaker of the House of Commons an allowance of \$1,500 in lieu of residence; these allowances are not taxable. The Deputy Chairman of Committees receives an annual allowance of \$4,000. Parliamentary Secretaries to the Ministers of the Crown receive an annual allowance of \$4,000 a year, in addition to their sessional and expense allowances. A motor vehicle allowance of \$2,000 is paid to each Minister of the Crown and to the recognized Leader of the Opposition in the House of Commons, and a motor vehicle allowance of \$1,000 is paid to the Speakers of the Senate and of the House of Commons; these allowances are not taxable.

A member of Parliament contributes, by reservation, 6 p.c. of his full sessional indemnity toward his retirement allowance, which is based on five twelfths of the total contributions, paid or elected to be paid; to the widow of an ex-member is paid three fifths of the allowance paid or payable to the ex-member at the time of his death. The maximum allowance payable to an ex-member is \$9,000 per annum and the maximum payable to the widow of an ex-member is \$5,400 per annum.

An Act to make provision for the retirement of members of the Senate (SC 1965, c. 4) entitles a Senator appointed after June 2, 1965 to become a contributor under the provisions of the Members of Parliament Retiring Act. Senators appointed prior to that date and who have not attained the age of 75 years, who elect under the provisions of this Act, are also entitled to become contributors. Under the provisions of the Retirement Act, a Senator contributes, by reservation, 6 p.c. of his sessional indemnity to the Consolidated Revenue Fund. A Senator appointed before June 2, 1965 who (a) within one year of attaining the age of 75 years resigns his place in the Senate or (b) resigns due to some permanent infirmity disabling him from performing his duties in the Senate, may be granted an annuity equal to two thirds of his sessional indemnity for life. The widow of a person granted such an annuity may receive an annuity equal to one third of the annuity to the ex-member of the Senate.

Every former Prime Minister who held office for four years will receive from the Consolidated Revenue Fund an allowance of two thirds of the annual salary provided for Prime Ministers under the Salaries Act, the allowance to commence when the former Prime Minister ceases to hold office, or attains the age of 70 years, whichever is the later, and to continue during his lifetime. The widow of a Prime Minister will receive an annual payment of one third of the allowance that was being paid or that would have been paid to her husband, where he dies without receiving the allowance, such allowance to commence immediately after the death of her husband and to continue during her natural life or until her remarriage. None of these allowances is payable while the recipient is a Senator or a member of the House of Commons.

**The Federal Franchise.**—The present federal franchise laws are contained in the Canada Elections Act (SC 1960, c. 39). The franchise is conferred upon all Canadian citizens or British subjects, men and women, who have attained the age of 21 years, are ordinarily resident in the electoral district on the date of the issue of the writ ordering an

election and, in the case of British subjects other than Canadian citizens, have been ordinarily resident in Canada for twelve months prior to polling day at such election. Persons denied the right to vote are:—

- (1) the Chief Electoral Officer and the Assistant Chief Electoral Officer;
- (2) judges appointed by the Governor General in Council;
- (3) the returning officer for each electoral district;
- (4) persons undergoing punishment as inmates of any penal institution for the commission of any offence;
- (5) persons restrained of their liberty or deprived of the management of their property by reason of mental disease; and
- (6) persons disqualified under any law relating to the disqualification of electors for corrupt and illegal practices.

Prior to July 1, 1960, the list of persons denied the right to vote included "Indians ordinarily resident on an Indian reserve who were not members of His Majesty's Forces in World Wars I or II or who did not execute a waiver of exemption under the Indian Act from taxation on and in respect of personal property". Legislation proclaimed on the above-mentioned date confers upon all Indians who have attained the age of 21 years the right to vote at federal elections, without taking from them any of the rights and privileges to which they are entitled under the Indian Act. The Eskimos who are Canadian citizens possess the right to vote in federal elections, and the assumption of that right in the far-flung communities of the Canadian Far North has grown with Government establishment of electoral districts and polling facilities.

The Canadian Forces Voting Rules set out in Schedule II to the Canada Elections Act prescribe voting procedure for members of the Armed Forces of Canada and also for veterans in receipt of treatment or domiciliary care in certain institutions.

#### 12.—Voters on the Lists and Votes Polled at the Federal General Elections of 1962, 1963 and 1965

NOTE.—Corresponding statistics for the General Elections of 1911, 1917, 1921 and 1925 are given in the 1926 Year Book, p. 82; those for 1926 in the 1945 edition, p. 66; those for 1930 and 1935 in the 1948-49 edition, p. 94; those for 1940 in the 1956 edition, p. 81; those for 1945 in the 1957-58 edition, p. 57; those for 1949, 1953 and 1957 in the 1962 edition, p. 71; and those for 1958 in the 1966 edition, p. 90.

### Subsection 3.—The Judiciary

#### The Federal Judiciary

The Parliament of Canada is empowered by Sect. 101 of the British North America Act from time to time to provide for the constitution, maintenance and organization of a general Court of Appeal for Canada and for the establishment of any additional courts for the better administration of the laws of Canada. Under this provision, Parliament has established the Supreme Court of Canada, the Exchequer Court of Canada and certain miscellaneous courts.

**Supreme Court of Canada.**—This Court, first established in 1875 and now governed by the Supreme Court Act (RSC 1952, c. 259), consists of a chief justice, who is called the Chief Justice of Canada, and eight puisne judges. The chief justice and the puisne judges are appointed by the Governor in Council and they hold office during good behaviour but are removable by the Governor General on address of the Senate and the House of Commons. They cease to hold office upon attaining the age of 75 years. The Court sits at Ottawa and exercises general appellate jurisdiction throughout Canada in civil and criminal cases. The Court is also required to consider and advise upon questions referred to it by the Governor in Council and it may also advise the Senate or the House of Commons on private Bills referred to the Court under any rules or orders of the Senate or of the House of Commons.

Appeals may be brought from any final judgment of the highest court of final resort in a province in any case where the amount or value of the matter in controversy exceeds the sum of \$10,000. An appeal may be brought from any other final judgment with leave of the highest court of final resort in the province; if such court refuses to grant leave, the Supreme Court of Canada may grant leave to appeal. The Supreme Court may grant leave to appeal from any judgment whether final or not. Appeals in respect of indictable offences are regulated by the Criminal Code. Appeals from federal courts are regulated by the statute establishing such courts. The judgment of the Supreme Court of Canada in all cases is final and conclusive.

#### 13.—Chief Justice and Judges of the Supreme Court of Canada, as at Oct. 1, 1966

(In order of seniority)

Name	Date of Appointment
Hon. Mr. ROBERT TASCHEREAU, P.C., Chief Justice of Canada.....	Apr. 22, 1963 <sup>1</sup>
Hon. Mr. Justice JOHN R. CARTWRIGHT.....	Dec. 23, 1949
Hon. Mr. Justice J. H. GERALD FAUTEUX.....	Dec. 23, 1949
Hon. Mr. Justice DOUGLAS CHARLES ABBOTT.....	July 1, 1954
Hon. Mr. Justice RONALD MARTLAND.....	Jan. 15, 1958
Hon. Mr. Justice WILFRED JUDSON.....	Feb. 5, 1958
Hon. Mr. Justice ROLAND A. RITCHIE.....	May 5, 1959
Hon. Mr. Justice EMMETT M. HALL.....	Nov. 23, 1962
Hon. Mr. Justice WISHART FLETT SPENCE.....	May 30, 1963

<sup>1</sup> First appointed a Judge of the Supreme Court, Feb. 9, 1940.

**Exchequer Court of Canada.**—The Exchequer Court was first established in 1875 as part of the Supreme Court of Canada but is now a separate court governed by the

Exchequer Court Act (RSC 1952, c. 98). The Court consists of a president and six puisne judges who are appointed by the Governor in Council. The president and the puisne judges hold office during good behaviour but may be removed by the Governor General on address of the Senate and the House of Commons. They cease to hold office upon attaining the age of 75 years. The Court sits at Ottawa and also at any other place in Canada where sittings may be fixed by the Court. The jurisdiction of the Court extends to cases where claims are made by or against the Crown in right of Canada. Proceedings against the Crown are taken by petition of right pursuant to the Petition of Right Act (RSC 1952, c. 210).

An appeal lies to the Supreme Court of Canada from any final judgment of the Exchequer Court in which the amount in controversy exceeds \$500; an appeal also lies with leave of the Supreme Court in certain cases where the amount in controversy does not exceed \$500 or where the judgment is not final.

The Exchequer Court also exercises admiralty jurisdiction in Canada. This was first conferred in 1891 by the Admiralty Act (SC 1891, c. 29) and is now governed by the Admiralty Act (RSC 1952, c. 1). Under this statute, the Exchequer Court is continued as a Court of Admiralty. The president and puisne judges of the Exchequer Court exercise admiralty jurisdiction throughout the whole of Canada. In addition, Canada is divided into various admiralty districts; a district judge in admiralty is appointed for each district. Appeals to the Supreme Court of Canada from judgments of the president or the puisne judges are governed by the general appeal provisions in the Exchequer Court Act. Appeals may be taken from a final judgment of a district judge in admiralty either to the Exchequer Court or direct to the Supreme Court of Canada.

**Miscellaneous Courts.**—*Railway Act.*—The Railway Act, 1903 (RSC 1952, c. 234) established the Board of Railway Commissioners for Canada as a court of record; by the Transport Act, 1938 (RSC 1952, c. 271) the name was changed to the Board of Transport Commissioners for Canada. This court exercises jurisdiction with respect to railway matters. The Governor in Council is given jurisdiction to vary any order of the Board and an appeal lies from the Board to the Supreme Court of Canada upon a question of jurisdiction or a question of law.

*Bankruptcy Act.*—By virtue of Sect. 91(21) of the British North America Act, 1867, Parliament has exclusive legislative jurisdiction in relation to bankruptcy and insolvency. By the Bankruptcy Act (RSC 1952, c. 14) the superior courts of the provinces are constituted bankruptcy courts; original jurisdiction is conferred upon the trial courts and appellate jurisdiction is conferred upon the appeal courts of the provinces.

*Income Tax Act and Estate Tax Act.*—By the Income Tax Act (RSC 1952, c. 148) the Tax Appeal Board is established consisting of a chairman and not fewer than two or more than four members with jurisdiction over appeals against income tax assessments. A further appeal may be taken to the Exchequer Court. Under the Estate Tax Act (SC 1958, c. 29) the Tax Appeal Board also has jurisdiction to hear appeals from assessments under that Act.

*National Defence Act.*—The Court Martial Appeal Court was established in 1959 by an amendment to the National Defence Act (SC 1959, c. 5). The judges of the Court are not fewer than four judges of the Exchequer Court of Canada designated by the Governor in Council and such additional judges of a superior court of criminal jurisdiction as are appointed by the Governor in Council. The Governor in Council designates one of the judges to be president of the Court. The Court hears appeals from courts martial respecting the legality of a finding of guilty on any charge and the legality of a sentence passed by a court martial. An appeal lies from the Court Martial Appeal Court to the Supreme Court of Canada on a question of law only.

### Provincial and Territorial Judiciaries\*

Certain provisions of the British North America Act govern to some extent the provincial judiciaries. Under Sect. 92(14) the legislature of each province exclusively may make laws in relation to the administration of justice in the province including the constitution, maintenance and organization of provincial courts both of civil and of criminal jurisdiction. Sect. 96 provides that the Governor General shall appoint the judges of the superior, district and county courts in each province, except those of the courts of probate in Nova Scotia and New Brunswick. Sect. 100 provides that the salaries, allowances and pensions of judges of the superior, district and county courts (except the courts of probate in Nova Scotia and New Brunswick) are to be fixed and provided by the Parliament of Canada and these are set out in the Judges Act (RSC 1952, c. 159 and amendments). Under Sect. 99, the judges of the superior courts hold office during good behaviour but are removable by the Governor General on address of the Senate and the House of Commons. They cease to hold office upon attaining the age of 75 years. The tenure of office of district and county court judges is fixed by the Judges Act as being during good behaviour and their residence within the area for which the court is established.

All provinces have minor courts with limited civil and criminal jurisdiction, the presiding officers of which are appointed by provincial authority as, for example, justices of the peace, magistrates and juvenile court judges. Except in Quebec, there are county or district courts of each province with limited jurisdiction varying from \$500 to \$2,500 in amount. Each province has a superior court with virtually unlimited jurisdiction variously known as Court of Queen's Bench, Supreme Court, Superior Court, etc. There is also a Court of Appeal in each province.

The Yukon Act and the Northwest Territories Act each provide for a superior court of record in and for the Territory, called the Territorial Court, and consisting of one or more judges appointed by the Governor in Council. The judges of the Territorial Court of the Yukon Territory are ex officio judges of the Territorial Court of the Northwest Territories and vice versa. There is a Court of Appeal in each of the Territories. Police magistrates and justices of the peace have jurisdiction in minor civil and criminal cases.

## Section 2.—Provincial and Territorial Governments†

In each of the provinces, The Queen is represented by a Lieutenant-Governor appointed by the Governor General in Council. The Lieutenant-Governor acts on the advice and with the assistance of his Ministry or Executive Council which is responsible to the Legislature and resigns office under circumstances similar to those described on p. 86 concerning the Federal Government.

The Legislature of each province is unicameral, consisting of the Lieutenant-Governor and a Legislative Assembly, except for the Province of Quebec where there is a Legislative Council as well as a Legislative Assembly. The Legislative Assembly is elected by the people for a statutory term of five years but may be dissolved within that period by the Lieutenant-Governor on the advice of the Premier of the province.

The source of legislative authority of the Provincial Legislatures is the British North America Act, 1867 (Br. Stat. 1867, c. 3 and amendments). Under Sect. 92 of the Act, the Legislature of each province exclusively may make laws in relation to the following matters: amendment of the constitution of the province except as regards the Lieutenant-

\* More detailed information concerning provincial judiciaries is given in the 1954 Year Book, pp. 48-55; a re-organization of the Supreme Court of Nova Scotia became effective Aug. 1, 1966.

† Except where indicated, the information given in this Section is brought up to June 30, 1966. Any important changes occurring between that date or the date given for an individual province and the time of going to press will be found in an Appendix to this volume.

Governor; direct taxation within the province; borrowing of money on the credit of the province; establishment and tenure of provincial offices and appointment and payment of provincial officers; the management and sale of public lands belonging to the province and of the timber and wood thereon; the establishment, maintenance and management of public and reformatory prisons in and for the province; the establishment, maintenance and management of hospitals, asylums, charities and eleemosynary institutions in and for the province, other than marine hospitals; municipal institutions in the province; shop, saloon, tavern, auctioneer and other licences issued for the raising of provincial or municipal revenue; local works and undertakings other than interprovincial or international lines of ships, railways, canals, telegraphs, etc., or works which, though wholly situated within one province, are declared by the Federal Parliament to be for the general advantage either of Canada or of two or more provinces; the incorporation of companies with provincial objects; the solemnization of marriage in the province; property and civil rights in the province; the administration of justice in the province including the constitution, maintenance and organization of provincial courts both of civil and of criminal jurisdiction including procedure in civil matters in these courts; the imposition of punishment by fine, penalty or imprisonment for enforcing any law of the province relating to any of the foregoing subjects; generally all matters of a merely local or private nature in the province.

Further, in and for each province the Legislature exclusively may, under Sect. 93, make laws in relation to education subject to certain restrictions relating to the establishment of schools by religious minorities. These powers with similar restrictions were conferred on the more recently admitted provinces on their inclusion in the federation.

The Provincial Legislatures may also make laws under Sect. 95 in relation to agriculture and immigration, subject to any laws of the Parliament of Canada in relation to these subjects.

**Provincial Franchise.**—Details regarding qualifications and disqualifications of the franchise are contained in the Elections Act of each province. In general, every person, male or female, at a specified age (18 to 21 years) who is a Canadian citizen or other British subject, who complies with certain residence requirements in the province and the electoral district of polling and who falls under no statutory disqualifications, is entitled to vote. Voting privileges are given to persons in Quebec and Saskatchewan at the age of 18, in Newfoundland, Alberta and British Columbia at 19 years, and in the remaining provinces at 21 years.

### Subsection 1.—Newfoundland

The Government of Newfoundland consists of a Lieutenant-Governor, an Executive Council and a Legislative Assembly. The Legislative Assembly has 42 members elected for a term of five years. The Legislature elected Sept. 8, 1966 is the 34th in the history of Newfoundland and the 6th since Confederation.

Since the date of Confederation, Mar. 31, 1949, the province has had four Lieutenant-Governors: the Hon. Sir Albert Joseph Walsh commissioned Apr. 1, 1949; the Hon. Lt.-Col. Sir Leonard Outerbridge commissioned Sept. 5, 1949; the Hon. Campbell Macpherson commissioned Dec. 16, 1957; and the Hon. Fabian O'Dea commissioned Mar. 1, 1963. The first Ministry, formed on July 13, 1949 under the leadership of the Hon. Joseph R. Smallwood, was still in office on Oct. 1, 1966.

The Premier receives a salary of \$10,000 and the other Cabinet Ministers \$9,000 per annum, plus a sessional indemnity of \$4,333.33 and a travelling and expense allowance of \$2,166.66. Each member of the House of Assembly receives a sessional indemnity of \$4,333.33 plus a travelling and expense allowance of \$2,166.66. An additional allowance of \$3,000 is made to the Leader of the Opposition.

**Subsection 2.—Prince Edward Island**

The Government of Prince Edward Island consists of a Lieutenant-Governor, an Executive Council and a Legislative Assembly. Lieutenant-Governors from Confederation (1873) to 1959 are cited in the 1960 Year Book, p. 105; since that date, the position has been held by the Hon. F. W. Hyndman, appointed effective Mar. 31, 1958, followed by the Hon. W. J. MacDonald, appointed effective Aug. 1, 1963.

The General Assembly elected May 30, 1966 is the 51st in the history of Prince Edward Island Legislatures and the 26th since Confederation. It has 32 members from 16 electoral districts who serve for a statutory term of five years. Each district elects one Councillor and one Assembly member. Premiers from Confederation to 1959 are listed in the 1960 Year Book, p. 105.

The annual salary of the Premier is \$8,000 and that of a Cabinet Minister \$5,000. Each member of the Assembly is paid \$2,000 for each session attended by him and an additional \$1,000 tax free as indemnity for expenses and travelling. The Speaker is paid an additional \$666.60 and a further additional \$333.40 tax free as indemnity for expenses and travelling. The Leader of the Opposition is paid an additional \$1,000 and a further additional \$500 tax free for expenses and travelling.

**Subsection 3.—Nova Scotia**

The Government of Nova Scotia consists of a Lieutenant-Governor, an Executive Council and a House of Assembly. Lieutenant-Governors from Confederation (1867) to 1959 are cited in the 1960 Year Book, p. 106; since that date the position has been held by Maj.-Gen. the Hon. E. C. Plow, commissioned to office Sept. 1, 1958, followed by the Hon. H. P. MacKeen, commissioned to office Mar. 1, 1963.

The Legislature has 43 members elected for a maximum term of five years. The Legislature elected Oct. 8, 1963 is the 48th in Nova Scotia's history and the 25th since Confederation. Premiers from Confederation to 1959 are listed in the 1960 Year Book, p. 107; the present Premier assumed office in 1956.

The Premier of the province receives a salary of \$12,000 per annum and each Cabinet Minister a salary of \$10,000 per annum and \$800 per annum as expenses of representation. Each member of the House of Assembly receives a sessional indemnity of \$4,000 and an allowance of \$2,000 for expenses incidental to the discharge of his duties. The Leader of the Opposition receives an allowance of \$7,200 and an \$800 representation allowance in addition to his sessional indemnity.

**Subsection 4.—New Brunswick**

The Government of New Brunswick has a Lieutenant-Governor, an Executive Council and a House of Assembly. Lieutenant-Governors since Confederation (1867) to 1959 are cited in the 1960 Year Book, p. 108; since that date, the position has been held by the Hon. J. Leonard O'Brien, appointed June 6, 1958, followed by the Hon. John B. McNair, appointed June 9, 1965.

The Legislature elected Apr. 22, 1963 is the 45th in New Brunswick's history and the 18th since Confederation. It has 52 members who are elected for a statutory term of five years. Premiers from Confederation to 1959 are listed in the 1960 Year Book, p. 108; the present Premier assumed office in 1960.

The Premier receives \$7,500 per annum in addition to the salary for any other portfolio he may hold. The salary of each Cabinet Minister is \$10,000 and the amount paid as indemnity to each member of the House of Assembly is \$3,400 plus an additional \$1,700 allowance for expenses. The Leader of the Opposition receives an additional \$6,000 and the Speaker receives an allowance of \$4,000 in addition to the regular indemnity.

**Subsection 5.—Quebec**

The Government of Quebec consists of a Lieutenant-Governor, an Executive Council and a bicameral legislature—the Legislative Council and the Legislative Assembly. Lieutenant-Governors from Confederation (1867) to 1959 are cited in the 1960 Year Book, p. 109; since that date the position has been held by the Hon. Onésime Gagnon, commissioned to office Feb. 14, 1958, followed by the Hon. Paul Comtois, commissioned to office Oct. 6, 1961, and the Hon. Hugues Lapointe, commissioned to office Feb. 22, 1966.

The Legislative Council has 24 members nominated for life by the Lieutenant-Governor in Council. The Legislative Assembly has 108 elected members and, like the Legislative Council, has the power to bring forward Bills relating to civil and administrative matters and to the amendment or repeal of existing laws. A Bill to be approved by the Lieutenant-Governor must have received the assent of both Houses. Only the Legislative Assembly can bring forward a Bill requiring the expenditure of public money. The maximum life of a legislature is five years. Premiers from Confederation to 1959 are listed in the 1960 Year Book, p. 110; the Hon. Jean Lesage became Premier in 1961 and the Hon. Daniel Johnson in 1966.

Each member of the Legislative Council and the Legislative Assembly receives a sessional indemnity of \$10,000, plus an expense allowance of \$2,000 to each Legislative Councillor and \$6,000 to each member of the Legislative Assembly. In addition to this sessional indemnity and allowance, the Premier receives an annual indemnity of \$16,000, an expense allowance of \$4,000 and a lodging allowance of \$2,000; Ministers with Portfolio each receive an annual indemnity of \$12,000 plus a \$3,000 expense allowance; Ministers without Portfolio each receive an indemnity of \$8,000 plus a \$3,000 expense allowance; the Speaker of the Legislative Assembly receives an indemnity of \$10,000, an expense allowance of \$2,000 and a lodging allowance of \$1,000 and the Deputy Speaker receives an indemnity of \$5,000 and an expense allowance of \$1,000; the Leader of the Opposition in the Assembly receives an indemnity of \$10,000, an expense allowance of \$3,000 and a lodging allowance of \$2,000; the Leader of the Government and the Leader of the Opposition in the Legislative Council each receive an additional sessional indemnity of \$2,000 plus a \$3,000 expense allowance.

**21.—Legislatures of Quebec, 1945-66, as at June 30, 1966**

NOTE.—Legislatures from Confederation to 1923 are given in the 1924 Year Book, p. 78; for 1924-35 in the 1938 edition, p. 113; and for 1936-44 in the 1963-64 edition, p. 85.

## Subsection 6.—Ontario

The Government of Ontario consists of a Lieutenant-Governor, an Executive Council and a House of Assembly. Lieutenant-Governors from Confederation (1867) to 1959 are cited in the 1960 Year Book, p. 112; since that date the position has been held by the Hon. Justice John Keiller Mackay, appointed effective Dec. 30, 1957, followed by the Hon. William Earl Rowe, appointed effective Mar. 1, 1963.

The House of Assembly, the single-chamber Legislature of the province, is composed of 108 members elected for a statutory term of five years. Premiers from Confederation to 1959 are listed in the 1960 Year Book, p. 112; the Hon. John Parmenter Robarts became Premier on Nov. 8, 1961 upon the resignation of the Hon. Leslie M. Frost, Premier from May 4, 1949.

Besides the regular departments of government, the Niagara Parks Commission, the Ontario Municipal Board, The Hydro-Electric Power Commission of Ontario, the Ontario-St. Lawrence Development Commission, the Ontario Northland Transportation Commission, the Liquor Control Board, the Liquor Licence Board, the Hospital Services Commission and The Water Resources Commission have been created.

Under the provisions of the Legislative Assembly Act (RSO 1960, c. 208 as amended) each member of the Assembly is paid an annual indemnity of \$8,000 and an allowance for expenses at the rate of \$3,000 for every member of the Assembly representing an electoral district within the Municipality of Metropolitan Toronto and \$4,000 for every member representing any other electoral district. In addition, the Speaker receives a special indemnity at the annual rate of \$3,000 and an expense allowance of \$2,000; the Chairman of the Committee of the Whole a special indemnity at the annual rate of \$2,000; and the Leader of the Opposition a salary of \$12,000 per annum in addition to his indemnity as a member. Each member of the Cabinet having charge of a department receives the ordinary indemnity as a member of the Legislature in addition to his salary as a Minister of the Crown. The salary provided in the Executive Council Act for the Premier is \$16,000 and for a Cabinet Minister having charge of a department \$12,000. By the 1956 amendment, every Minister of the Crown in charge of a department, the Minister of the Crown who is a member of The Hydro-Electric Power Commission of Ontario, and the Leader of the Opposition receives a representation allowance of \$2,000 per annum. Each Minister without Portfolio, other than the Minister who is a member of The Hydro-Electric Power Commission, receives \$2,500 salary and \$1,000 representation allowance per annum.

**24.—Legislatures of Ontario, 1945-66, as at June 30, 1966**

NOTE.—Legislatures from Confederation to 1923 are given in the 1924 Year Book, p. 79; for 1924-34 in the 1938 edition, p. 114; and for 1935-45 in the 1963-64 edition, p. 87.

Date of Election	Legislature	Number of Sessions	Date of First Opening	Date of Dissolution

Minister without Portfolio.....	Hon. GEORGE ELLIS GOMME.....	Jan. 12, 1965	Jan. 12, 1965

**Subsection 7.—Manitoba**

In addition to a Lieutenant-Governor, Manitoba has an Executive Council at present composed of 14 members and a Legislative Assembly of 57 members elected for a statutory term of five years. Lieutenant-Governors from Confederation (1870) to 1959 are cited in the 1960 Year Book, p. 113; since that date, the position has been held by the Hon. Errick F. Willis, sworn in on Jan. 15, 1960, followed by the Hon. Richard S. Bowles, appointed July 2, 1965. Premiers since Confederation are listed in the 1960 Year Book, p. 114.

The Premier of the province is paid a salary of \$18,000 per annum and each of the other members of the Cabinet \$15,000. Members of the Legislature are each paid a sessional indemnity of \$3,200 and a tax-free expense allowance of \$1,600 plus an allowance of \$10 a day for a period of 60 days continuous sitting including Saturdays and Sundays for members outside Metro Winnipeg who have to take board and lodging in Winnipeg during legislative sessions, and Cabinet Ministers in charge of a department each receive

an additional "representation allowance" of \$3,000. The Leader of the Opposition is paid an additional amount of \$6,000 and the Speaker of the Legislature receives \$9,600 which is an amount equal to double the indemnity and expense allowance of an individual member.

### 26.—Legislatures of Manitoba, 1945-66, as at Oct. 1, 1966

NOTE.—Legislatures from Confederation to 1923 are given in the 1924 Year Book, p. 80; for 1924-36 in the 1938 edition, p. 115; and for 1937-45 in the 1963-64 edition, p. 88.

### Subsection 8.—Saskatchewan

The Government of Saskatchewan consists of a Lieutenant-Governor, an Executive Council and a Legislative Assembly. Lieutenant-Governors from Confederation (1905) to 1959 are cited in the 1960 Year Book, p. 115; since that date the office has been held by the Hon. F. L. Bastedo, commissioned to office Jan. 27, 1958, followed by the Hon. Robert L. Hanbidge, commissioned to office Mar. 1, 1963.

The statutory number of members of the Legislative Assembly is 59, elected for a maximum term of five years. Premiers from Confederation to 1959 are listed in the 1960 Year Book, p. 115; the Hon. W. S. Lloyd became Premier in 1961 and the Hon. W. R. Thatcher in 1964.

The Premier receives \$13,000 and each Cabinet Minister \$10,000 annually in addition to a sessional indemnity. The Leader of the Opposition receives \$10,000 plus an office allowance of \$12,000 per annum, the Speaker \$3,000 and the Deputy Speaker \$2,000. The sessional indemnity of a member of the Legislature is \$1,000 together with an expense allowance of \$2,000. Each of the members for the three northernmost constituencies of Cumberland, Athabasca and Meadow Lake receives a \$4,335 sessional indemnity and a \$2,165 expense allowance.

## 28.—Legislatures of Saskatchewan, 1945-66, as at June 30, 1966

NOTE.—Legislatures from Confederation to 1923 are given in the 1924 Year Book, p. 81; for 1924-34 in the 1938 edition, p. 116; and for 1935-44 in the 1963-64 edition, p. 89.

## Subsection 9.—Alberta

The Government of Alberta is composed of a Lieutenant-Governor, an Executive Council and a Legislative Assembly. Lieutenant-Governors from Confederation (1905) to 1959 are listed in the 1960 Year Book, p. 116; since that date the office has been held by the Hon. J. Percy Page, commissioned to office Dec. 19, 1959, followed by the Hon. J. W. Grant MacEwan, commissioned in January 1966.

There are 63 members in the Legislative Assembly, elected for a maximum period of five years. Premiers since Confederation are listed in the 1960 Year Book, p. 117; the present Premier assumed office in 1943.

Each member of the Legislative Assembly (except the Speaker, the Deputy Speaker and the Leader of the Opposition) receives a sessional indemnity of \$3,600 plus \$1,800

expense allowance plus \$15 for each day during the session when the member is necessarily absent from his ordinary place of residence, both tax free. The Speaker's sessional indemnity is \$6,000 plus \$3,000 expense allowance, the Deputy Speaker's sessional indemnity is \$4,800 plus \$2,400 expense allowance, and the Leader of the Opposition's sessional indemnity is \$7,600 plus \$3,800 expense allowance. Each also receives \$15 for each day during the session when he is necessarily absent from his ordinary place of residence. The Premier, in addition to the sessional indemnity, receives \$16,000 and each of the other Ministers receives \$12,500.

### 30.—Legislatures of Alberta, 1945-66, as at June 30, 1966

NOTE.—Legislatures from Confederation to 1923 are given in the 1924 Year Book, p. 82; for 1924-34 in the 1938 edition, p. 117; and for 1935-44 in the 1963-64 edition, p. 90.

### Subsection 10.—British Columbia

The Government of British Columbia has a Lieutenant-Governor, an Executive Council and a Legislative Assembly. Maj.-Gen. the Hon. George Randolph Pearkes, Lieutenant-Governor at Apr. 30, 1965, was commissioned to office Oct. 12, 1960. Lieutenant-Governors from Confederation (1871) to 1959 are cited in the 1960 Year Book, p. 118.

The Legislative Assembly, elected for a statutory term of five years, has 55 members. Premiers from Confederation to 1959 are cited in the 1960 Year Book, p. 118; the present Premier assumed office in 1952.

Each member of the Executive Council and the Legislative Assembly receives a sessional allowance of \$5,000 and \$1,500 for expenses. There is also paid to each member a living

allowance of \$1,000 and each member receives an allowance of 25 cents per mile of the distance between his place of residence and the city of Victoria, reckoning such distance, going and coming, according to the nearest mail route. Each member also receives an allowance of \$500 for telegraph and telephone expenses. In addition, the Premier receives a salary of \$20,000 and each member of the Executive Council a salary of \$17,500. The Leader of the Opposition receives a special allowance of \$7,500 for expenses, the Speaker receives a special allowance of \$7,500, and the Deputy Speaker a special allowance of \$2,500.

### 32.—Legislatures of British Columbia, 1945-66, as at Oct. 21, 1966

NOTE.—Legislatures from Confederation to 1923 are given in the 1924 Year Book, p. 83; for 1924-37 in the 1938 edition, p. 118; and for 1938-45 in the 1963-64 edition, p. 91.

### Subsection 11.—Yukon Territory and Northwest Territories

**Yukon Territory.**—The Yukon was created a separate Territory on June 13, 1898 (see p. 82). Provision is made for a local government administered by a Commissioner appointed by the Governor in Council. There is an elected Council of seven members (1961) which usually meets twice a year in Whitehorse, the seat of local government; the Council elects its own speaker. The Commissioner administers the government under

instructions from the Governor in Council or the Minister of Indian Affairs and Northern Development. The Commissioner in Council has power to make ordinances dealing with the imposition of local taxes, sale of liquor, preservation of game, establishment of territorial offices, maintenance of municipal institutions, issue of licences, incorporation of companies, solemnization of marriage, property and civil rights, and generally all matters of a local nature in the Territory. The Commissioner and Council in office on June 30, 1966 were elected in 1964 for a three-year term.

#### GOVERNMENT OF THE YUKON TERRITORY

(as at June 30, 1966)

<b>Commissioner</b> .....	G. R. CAMERON
<b>Members of the Council—</b>	
Carmacks-Kluane.....	ROBERT D. MACKINNON
Dawson.....	GEORGE O. SHAW (Speaker)
Mayo.....	FRANK G. SOUTHAM
Watson Lake.....	DONALD G. TAYLOR
Whitehorse East.....	HERBERT E. BOYD
Whitehorse North.....	JOHN KENNETH THOMPSON
Whitehorse South.....	J. WATT
<b>Officers of the Council—</b>	
Territorial Secretary and Clerk of the Council.....	H. J. TAYLOR
Territorial Treasurer.....	K. MCKENZIE
Legal Adviser.....	C. P. HUGHES

The Northern Administration Branch, Department of Indian Affairs and Northern Development, has the responsibility for the general administration of the natural resources of the Yukon Territory, except game. The Department maintains lands and mining offices at four points in the Territory. Other departments and agencies of the Federal Government maintaining offices in Yukon Territory include: the Department of Justice, the Royal Canadian Mounted Police, the Department of National Defence, the Department of Energy, Mines and Resources, the Department of National Revenue, the Department of Transport, the Post Office Department, the Department of Agriculture, the Department of Public Works, the Department of Fisheries, and the (now) Department of Manpower and Immigration.\*

**Northwest Territories.**—As reconstituted on Sept. 1, 1905, the Northwest Territories comprise: (1) all that part of Canada north of the 60th parallel of north latitude, except the portions thereof within the Yukon Territory and the Provinces of Quebec and Newfoundland; and (2) the islands in Hudson Bay, James Bay and Ungava Bay, except those islands within the Provinces of Manitoba, Ontario and Quebec.

The Northwest Territories Act (RSC 1952, c. 331) provides for the appointment of a Commissioner to administer the government of the Territories under instructions given from time to time by the Governor in Council or the Minister of Indian Affairs and Northern Development. The Northwest Territories Act, as amended, also provides for a Council of nine members, four of whom are elected in the Mackenzie District and five of whom are appointed by the Governor in Council. The Commissioner in Council has legislative powers respecting such matters as direct taxation, establishment and tenure of territorial offices, municipal institutions, controverted elections, licences, incorporation of companies, property and civil rights, administration of justice, game, education, hospitals and generally all matters of a local or private nature. The Council meets once each year in the Terri-

\* Further information on officials of various Federal Government departments serving the Yukon Territory may be obtained from the Director, Northern Administration Branch, Department of Indian Affairs and Northern Development, Ottawa.

tories and at least once each year in Ottawa which is the seat of government. The resources, except game, remain under the control of the Federal Government. The administration of legislation passed by the Commissioner in Council and the maintenance of resources under federal legislation are conducted by the Northern Administration Branch of the Department of Indian Affairs and Northern Development. Administrative offices are located at a number of centres in the Territories including Fort Smith, Yellowknife, Hay River, Inuvik and Frobisher Bay.

#### COUNCIL OF THE NORTHWEST TERRITORIES

(as at June 30, 1966)

<b>Commissioner</b> .....	B. G. SIVERTZ
<b>Deputy Commissioner</b> .....	STUART M. HODGSON
<b>Members of the Council—</b>	
Appointed.....	STUART M. HODGSON HUGH CAMPBELL ROBERT N. HARVEY DR. FRANK VALLÉE ABRAHAM OKPIK
Elected—	
Mackenzie North.....	PETER BAKER
Mackenzie South.....	ROBERT PORRITT
Mackenzie River.....	J. W. GOODALL
Mackenzie Delta.....	LYLE R. TRIMBLE
<b>Officers of the Council—</b>	
Secretary.....	F. H. MURPHY
Legal Adviser.....	DR. HUGO FISCHER

In May 1965, the Minister of Indian Affairs and Northern Development announced the establishment of an Advisory Commission on the Development of Government in the Northwest Territories to study the practical problems involved, seek the views of northern residents and recommend to the Federal Government the steps required to give a greater measure of self-government to the Northwest Territories. The Commission is an impartial, fact-finding group, its three members being drawn from fields outside Government. The Commission was to present its report in the autumn of 1966.

### Section 3.—Municipal Government\*

The British North America Act of 1867 placed municipal government in Canada under the control of the provincial legislatures. The powers and responsibilities of municipalities are those delegated to them by statutes passed by their respective provincial legislatures. Some of these statutes apply to all municipalities within a province, some to a certain type or group and many to one municipality only. The types of municipal organization in existence and the nature of the municipal services provided vary greatly from region to region and are adjusted from time to time to meet changing needs and conditions.

In addition to the well-known types of organized municipalities—cities, towns, villages, counties, etc.—there are various other forms of local government organization. Certain municipal government bodies encompass a number of municipalities or parts of municipalities. For example, special district authorities (greater water and sewerage and drainage districts, irrigation districts and health units) may provide services to a number of municipalities. Similarly, metropolitan government authorities provide certain services to a number of area municipalities. In some provinces, the more sparsely settled areas do not

\* Revised (as at Jan. 1, 1966) in the Governments Division, Financial Statistics Branch, Dominion Bureau of Statistics.

have organized municipalities. Instead, they are divided into local improvement districts, local government districts or special areas in which the local government services are administered by officials appointed by the provincial Departments of Municipal Affairs.

The major local revenue source available to municipalities is the taxation of real property. It is supplemented in varying degrees by taxation of personal property, business persons (poll taxes) and tenants. In two provinces municipalities may levy an amusement tax, in three they may impose sales taxes on specific commodities. Miscellaneous general revenue is derived from licences, permits, rents, concessions, franchises and fines. A great many municipalities operate utilities for the provision of water and, in many instances, electricity, gas, transportation, telephone and other services. These sometimes provide surplus funds that may become available to help pay for other municipal services. On the other hand, expenditures of municipalities often include provision for the deficits of their utilities and enterprises.

In differing degrees and with varying provincial assistance, municipalities are responsible for the following services: protection to persons and property through police and fire forces, courts and local gaols, and inspection services; roads and streets; sanitation; certain health and welfare services; and some recreation and other community services. In most provinces, municipalities are responsible for levying and collecting local education taxes on behalf of the local schools, and often for borrowing capital funds for school construction. Local administrative responsibility for education lies with boards of trustees separate from the councils that govern municipalities (except Alberta; see p. 122).

All provinces give some form of financial assistance to their municipalities. This may be in the form of monetary grants, such as unconditional subsidies which may be spent as the municipalities see fit, or grants-in-aid of specific services that are the municipal responsibility. The provinces may also make loans to municipalities for capital purposes or guarantee the bonds issued by the municipalities. Other forms of indirect assistance are the resumption by the provincial governments of responsibilities formerly delegated to the municipalities and the extension of municipal taxing privileges into what were formerly considered to be provincial revenue fields. The provinces also provide various technical and consultative services to their municipalities.

The following paragraphs describe municipal organization in each province and in the Territories as at Jan. 1, 1966. In Table 34 (which gives the number of each type of municipality in each province) all fully incorporated cities, towns and villages are regarded as 'urban' municipalities.

**Newfoundland.**—The Province of Newfoundland has two cities—St. John's and Corner Brook. A number of the province's many settlements have been organized into 54 towns, four rural districts, eight local improvement districts and 60 local government communities. The towns, rural districts and local improvement districts operate under the Local Government Act; towns and rural districts have elected councils and local improvement districts have appointed trustees. Local government communities established under the Community Councils Act in the smaller settlements have limited powers and functions. There are no rural municipalities in the usual sense. Only about one fifth of 1 p.c. of the total area is municipally organized. Municipalities are supervised by the Department of Municipal Affairs and Supply.

**Prince Edward Island.**—In this province, one city and seven towns have been incorporated under special Acts and 21 villages have been established under the Village Services Act. There is no municipal organization for the remainder of the province although it is divided into school sections which have elected school boards.

**Nova Scotia.**—Municipal organization in Nova Scotia covers the whole of the province. The three cities operate under special charters and special legislation. Thirty-nine towns operate under the Town Incorporation Act but there are no municipalities incorporated as villages. Cities and towns are independent of counties. The rural area is divided into 18 counties which, in themselves, do not represent units of local government. However, 12 of these counties each comprise one municipality and the other six each comprise two municipalities, making a total of 24 rural municipalities. Supervision of municipalities is exercised through the Department of Municipal Affairs.

**New Brunswick.**—This province is divided into 15 counties which are incorporated municipalities and have direct powers of local self-government as rural municipalities, although certain of their powers often apply in both rural and urban municipalities. The six cities have special charters and the 21 towns operate under the Towns Incorporation Act. There is also one village. There are 60 local improvement districts and 10 commissions within the counties but outside the cities, towns and village; these have been incorporated for the provision of limited municipal services. The Department of Municipal Affairs exercises supervision.

**Quebec.**—Municipal divisions in Quebec embrace the more thickly settled areas comprising about one third of the province and the remainder is governed by the province as 'territories'. The organized area is divided into 74 county municipalities which are divided again into local municipalities and designated as village, township or parish municipalities or simply as municipalities. The counties as such have no direct powers of taxation. Funds to finance the services falling within their jurisdiction are provided by the municipalities forming part thereof. Parts of some counties are not yet organized into incorporated units of local government, being in outlying areas and having little or no population. There are 316 villages and 1,102 townships and parishes. A small number of these are independent of the counties in which they are located. The Municipal Code governs local municipalities and the 62 cities and 178 towns have special Acts. The supervision and assistance of municipalities is through the Department of Municipal Affairs and the Quebec Municipal Commission. Municipal statistics are gathered by the Quebec Bureau of Statistics.

The active functions of the Montreal Metropolitan Corporation are limited because of the ability of the area municipalities to fulfil their own obligations. The Corporation services borrowings contracted before Apr. 1, 1961, when the Montreal Metropolitan Boulevard became a provincial responsibility, and apportions costs incurred in the area municipalities for streets constructed on each side of the Boulevard.

**Ontario.**—Slightly more than one tenth of the area of Ontario is municipally organized and the remainder is governed entirely by the provincial government. The older settled section of the province is divided into 43 counties, five of which are united with others for administrative purposes. Each county, although it is an incorporated municipality, is comprised of the towns, villages and townships situated within its borders and these provide its revenue. There are 33 cities, 155 towns, 158 villages, 571 townships and 18 improvement districts in the province. Some of each are located in the northern districts which are not organized into counties. Supervisory control of municipalities is exercised by the Department of Municipal Affairs and the Ontario Municipal Board under the Municipal Act and other Acts governing aspects of municipal government.

The Municipality of Metropolitan Toronto, in existence since Jan. 1, 1954, encompasses one city, four towns, three villages and five townships. The Metropolitan Council is composed of the mayor, two senior controllers and the senior alderman of each of the nine wards of the City of Toronto, and the head of the council of each of the 12 suburban municipalities. The chairman is elected by the councillors and need not be a councillor

of an area municipality. The Council has jurisdiction over assessments, water supply, sewerage works, metropolitan road systems, transit, municipal housing developments, community planning, parks and recreation areas, the Court House, certain health and welfare services and the correlation of educational facilities in the metropolitan area. It also controls a unified metropolitan police force and a metropolitan licensing commission. Expenditures are financed by a levy apportioned among the area municipalities. All borrowing of the area municipalities for capital purposes is done by the Municipality of Metropolitan Toronto.

**Manitoba.**—Manitoba has nine cities, which derive their powers from special Acts and do not come under the supervision of the Department of Municipal Affairs. The Department supervises the 36 towns, 41 villages and 110 rural municipalities under the Municipal Act. There are local government districts in settled areas not within municipalities where the province has placed a resident administrator to carry out the functions of a municipal council. The unorganized areas are the direct responsibility of the provincial government.

The Metropolitan Corporation of Greater Winnipeg has been in existence since Nov. 1, 1960. Its council is separate and distinct from those of the 16 area municipalities. The councillors are elected as individuals from ten new districts, each containing approximately the same number of voters. The council has jurisdiction over planning, zoning, land development, assessments, arterial roads, water supply, sewage disposal, transit and other services. It borrows money only for its own undertakings and leaves to its area municipalities the responsibility for welfare, police, fire protection and other services. Expenditures are financed by a proportion of the business and other taxes levied on industrial or commercial property by the area municipalities and by a uniform levy on the equalized assessment of all taxable real property in the area municipalities.

**Saskatchewan.**—All municipalities in Saskatchewan derive their powers from general Acts that are designated with the name of the type of municipality. There are 11 cities, 123 towns, 363 villages and 294 rural municipalities. The area so organized consists of most of the southern two fifths of the province: the remainder of this portion is administered for local purposes by the province in unincorporated local improvement districts. The northern three fifths is sparsely populated and without local government, although some municipal services are provided by the province through operation of the Northern Administration District. Municipalities are supervised by the Department of Municipal Affairs.

**Alberta.**—The whole Province of Alberta is under some type of municipal organization. The province has an Act applying to each type of municipality and under these Acts the Department of Municipal Affairs supervises the nine cities, 93 towns, 167 villages, 21 municipal districts and 28 counties. The latter administer schools as well as municipal services. Municipal government for the 51 improvement districts and three special areas is provided by the Department of Municipal Affairs.

**British Columbia.**—Less than one half of 1 p.c. of the area of British Columbia is organized into municipalities. Additional small areas have sufficient population to require administration of local activities by the provincial government. There are 32 cities, ten towns, 58 villages and 36 districts; the latter are mostly rural municipalities although there are some districts adjacent to the principal cities of Victoria and Vancouver that are largely urban in character. It should be emphasized, however, that the application of the name 'city' is somewhat different from the commonly accepted meaning, in that several of them have populations of fewer than 3,000 and perhaps one half or more would not normally be incorporated as cities in another province. Municipalities are supervised by the Department of Municipal Affairs.

In addition to the above types of municipalities, there are unincorporated improvement districts that have been set up to provide certain municipal services such as protection, waterworks, irrigation, etc. These districts are under the supervision of the Department of Lands, Forests, and Water Resources.

**Yukon and Northwest Territories.**—There are two cities, Whitehorse and Dawson, and one unincorporated town, Mayo, in the Yukon Territory and two towns, Yellowknife and Hay River, in the Northwest Territories, all of which provide some municipal services to their local areas. These are not shown in Table 34.

**34.—Municipalities classified by their Official Designation and Statistical Classification, by Province, as at Jan. 1, 1966**

<sup>1</sup> Municipalities grouped according to their official nomenclature, which is roughly indicative of size and nature (see footnote <sup>9</sup>).

<sup>2</sup> Municipalities grouped under the classification devised by the Dominion-Provincial Conferences on Municipal Statistics designed to bring municipalities into comparable groups for statistical presentation.

<sup>3</sup> Includes the 60 local improvement districts; excludes commissions.

<sup>4</sup> The Montreal Metropolitan Corporation.

<sup>5</sup> The Municipality of Metropolitan Toronto.

<sup>6</sup> The Metropolitan Corporation of Greater Winnipeg.

<sup>7</sup> Designated by the province as towns (54), rural districts (4) and local improvement districts (8); all operate under the same Act.

<sup>8</sup> Classified by the province as community councils.

<sup>9</sup> Rural municipalities are designated by different names in the different provinces.

<sup>10</sup> Includes the 18 improvement districts.

<sup>11</sup> Includes the 3 units of self-government known as suburban municipalities; excludes the unincorporated local government districts.

<sup>12</sup> Excludes the 12 unincorporated local improvement districts.

<sup>13</sup> Includes the 28 county municipalities; excludes the unincorporated improvement districts and the special areas.

<sup>14</sup> Excludes the unincorporated improvement districts, the local districts and the new regional districts.

<sup>15</sup> Includes municipalities shown wholly or partly in metropolitan areas by the 1961 Census, with subsequent revisions to take care of annexations, etc. Included in "Urban" are the Montreal Metropolitan Corporation, the Municipality of Metropolitan Toronto and the Metropolitan Corporation of Greater Winnipeg.

<sup>16</sup> Classified by the province as suburban or semi-urban.

## Section 4.—Federal and Provincial Royal Commissions

**Federal Royal Commissions Established.**—Royal Commissions established from May 1, 1965 to June 30, 1966 under Part I of the Federal Inquiries Act are given here in continuation of those previously reported in the Year Books beginning with the 1940 edition, pp. 1108-1110. Any Commission established between June 30, 1966 and the date of going to press will be found in the Register of Official Appointments, Chapter XXVII, Part III.

<i>Nature of Commission</i>	<i>Chief Commissioner</i>	<i>Date Established</i>
To inquire into the marketing problems of the freshwater fish industry in the Provinces of Ontario, Manitoba, Saskatchewan and Alberta and in the Northwest Territories.	GEORGE H. McIVOR.....	July 9, 1965
To inquire into the increases in rates of pay for civil servants in Group D announced by the Government on July 16, 1965.	Judge JACOB CARROLL ANDERSON..	July 23, 1965
To inquire into working conditions in the Post Office Department.	Hon. Mr. Justice ANDRÉ MONTPETIT	Sept. 1, 1965
To inquire into the dealings of the Hon. Mr. Justice Léo A. Landreville with Northern Ontario Natural Gas Limited.	Hon. I. C. RAND.....	Jan. 19, 1966
To inquire into the complaints made by George Victor Spencer.	Hon. Mr. Justice D. C. WELLS....	Mar. 7, 1966
To inquire into matters relating to one Gerda Munsinger.	Hon. Mr. Justice W. F. SPENCE....	Mar. 14, 1966

**Reports of Federal Royal Commissions.**—Reports of Federal Royal Commissions issued during the period May 1, 1965 to June 30, 1966 were as follows:—

Report of Commission of Inquiry into allegations about improper inducements and pressures on counsel acting for the extradition of Lucien Rivard, established Nov. 25, 1964. Ottawa, June 1965. 149 p. \$1. (Cat. No. Z1-1964/2).

Report of Commission of Inquiry into circumstances surrounding the crash of Douglas DC-8F Aircraft CF-TJN at Ste. Thérèse de Blainville, Que., on Nov. 29, 1963, established Oct. 8, 1964. Ottawa, 1965. 41 p. 50¢. (Cat. No. Z1-1964/3).

Interim Report of Commission of Inquiry into increases in rates of pay for civil servants in Group D, established July 23, 1965. Ottawa, August 1965. 15 p. 15¢. (Cat. No. Z1-1965/1-1).

Report of Commission of Inquiry as to the future of the Air Canada overhaul base at Winnipeg International Airport and related matters, established June 11, 1964. Ottawa, 1966. 175 p. Free. (Cat. No. Z1-1964/4).

**Provincial Royal Commissions.**—The following provincial Royal Commissions were established during the period May 1, 1965 to June 30, 1966:—

<i>Province and Nature of Commission</i>	<i>Chief Commissioner or Chairman</i>	<i>Date Established</i>
<b>NEWFOUNDLAND</b>		
*To inquire into economic prospects for Newfoundland.	GORDON PUSHIE.....	Dec. 11, 1964
To inquire into legislation governing the practice of accounting and auditing throughout the province.	Sir BRIAN DUNFIELD.....	Jan. 6, 1966
To inquire into minimum wage rates.....	..	Feb. 3, 1966
To inquire into the tax structure of the City of St. John's.	J. D. FRASER.....	Feb. 21, 1966
To inquire into food and drug costs.....	W. G. ADAMS.....	Mar. 3, 1966
To inquire into the pension plans applying to employees of the Government of Newfoundland and Labrador and the College of Fisheries and to teachers.	G. T. DYER.....	Apr. 22, 1966
<b>NOVA SCOTIA</b>		
To inquire into the milk industry.....	R. L. MACDOUGALL.....	May 9, 1966

\* Appointed prior to May 1, 1965 but omitted from the list published in the 1966 Year Book.

<i>Province and Nature of Commission</i>	<i>Chief Commissioner or Chairman</i>	<i>Date Established</i>
<b>NEW BRUNSWICK</b>		
Committee on the financing of higher education in New Brunswick.	Dr. JOHN J. DEUTSCH.....	Feb. 9, 1966
Inquiry into and concerning all negotiations and transactions between Her Majesty the Queen in right of the Province and Coastal Industries Limited and St. Regis Paper Company (Canada) Ltd. from Jan. 1, 1964 to Dec. 31, 1965.	Mr. Justice RALPH V. LIMERICK...	Feb. 16, 1966
<b>ONTARIO</b>		
To inquire into and make recommendations concerning the failure of Atlantic Acceptance Corporation Limited to meet its obligations.	Mr. Justice H. S. HUGHES.....	Aug. 12, 1965
<b>MANITOBA</b>		
The Totogan Farms Limited Commission to inquire into circumstances surrounding acquisition by the Crown of certain property.	Mr. Justice R. G. B. DICKSON.....	Feb. 2, 1966
<b>BRITISH COLUMBIA</b>		
To inquire into the redefinition of electoral districts.	Dr. H. F. ANGUS.....	Aug. 5, 1965
To inquire into automobile insurance rates.....	Mr. Justice R. A. B. WOOTTON.....	Jan. 25, 1966

## PART III.—ADMINISTRATIVE FUNCTIONS OF THE FEDERAL GOVERNMENT

### Section 1.—Financial Administration\*

The financial affairs of the Government of Canada are administered and controlled under the fundamental principles that no tax shall be imposed and no money shall be spent without the authority of Parliament and that expenditures shall be made only for the purposes authorized by Parliament. The most important constitutional provisions relating to Parliament's control of finances are contained in the British North America Act; this Act provides that all taxing and appropriating measures must originate in the House of Commons and all requests for grants must come from the Crown through responsible Ministers, and for such requests the Government is solely responsible. In practice, financial control is exercised through a budgetary system based on the principle that all the financial needs of the Government for each fiscal year be considered at one time so that both the current condition and the prospective condition of the public treasury are clearly in evidence.

**Estimates and Appropriations.**—The co-ordination of the Estimates process is carried out by the Treasury Board. This Board is a separate department of government, its Minister having the designation of President of the Treasury Board. In addition to the President, the Board consists of five other Privy Councillors and the Minister of Finance who serves *ex officio* as a member. Under the Financial Administration Act, the Board has a statutory duty to advise the Governor in Council on matters relating to finance, estimates, expenditures, financial commitments, establishments, revenues, accounts, terms and conditions of employment of persons in the public service and general administrative policy in the public service (see also p. 141).

The Estimates for any one fiscal year are determined as a result of a two-phased review by the Treasury Board of departmental proposals for expenditure. In the spring of each year, at the request of the Secretary of the Treasury Board, each department submits to the Treasury Board a forecast of Estimates for the current and following four fiscal years.

\* Prepared under the direction of H. R. Balls, Comptroller of the Treasury, Ottawa.

During the summer, a review of the programs giving rise to these Estimates forecasts is carried out by the Treasury Board as a result of which tentative Estimates figures are determined for each department for the coming fiscal year. The Board reviews each departmental program submission in the light of probable revenues and governmental policy generally, usually consulting the appropriate Minister and officials. Each department, using these figures as guidelines, develops in detail its manpower and other resource requirements and submits them to the Treasury Board late in October in the form of Main Estimates for the fiscal year beginning Apr. 1. These Estimates are analysed by the Treasury Board staff and compared with the guidelines determined during the spring program review. The Board reviews each departmental submission in the light of the current budgetary outlook. The Estimates may be rejected or reduced and unresolved differences of opinion may be referred to Cabinet for decision. When the Board is satisfied with their substance and form, the Main Estimates are submitted to the Cabinet and later to the Governor in Council for approval and are then laid before the House of Commons.

On motion of the Minister of Finance, the Estimates are referred for consideration to the Committee of Supply, which is a committee of the whole House. However, the Estimates of certain departments may first go to select committees of the House; these, after being reported upon to the House, are referred back to the Committee of Supply. The consideration of the Estimates usually extends over a period of several months. Each vote is the subject of a separate resolution and Members of the House may question the Minister on any item but no private member or Minister on his own responsibility can introduce any new expenditure proposal or any amendment to an Estimates item that would result in an increased expenditure. When the examination of the individual items has been completed, the Estimates are referred to the Committee of Ways and Means, also a committee of the whole House, which is asked to consider a resolution for the introduction of a Bill to appropriate money to meet the requirements as approved in the Committee of Supply. When such resolution is passed, an appropriation Bill is introduced which, when approved by the House of Commons and the Senate, is given Royal Assent and becomes law. Grants in the Appropriation Acts are grants to the Crown and funds cannot be disbursed until the supply voted by Parliament to the Crown is released by a warrant prepared on an Order of the Governor in Council and signed by the Governor General.

As weeks or months may elapse after the commencement of the fiscal year before the main Appropriation Act is passed, funds are made available for the conduct of government functions by the passage of an interim supply Bill granting one sixth of the total of each item in the Estimates, equivalent to two months' supply. Additional interim supply Bills may be introduced if required, awaiting Parliament's detailed consideration of the Estimates. In addition, to cover any new and unforeseen requirements that might arise during the year, Supplementary Estimates are usually introduced after some months of the fiscal year have elapsed, and just prior to the end of the fiscal year further Supplementary Estimates are laid before the House. These Supplementary Estimates are dealt with in the same manner as the Main Estimates.

In addition to the expenditure items included in the annual Appropriation Acts, there are a number of items, such as interest on the public debt, family allowances and old age assistance payments, which have been authorized under the provisions of other statutes. Although it is not necessary for Parliament to pass annually on these items, they are included in the Main Estimates for purposes of information. Statutory provision is also made for the expenditure of public money in emergencies where no specific parliamentary appropriation is available. Under the Financial Administration Act, the Governor in Council, upon the report of the Minister of Finance that there is no appropriation for the expenditure and upon the report of the appropriate Minister that the expenditure is urgently required, may order the issuance of a special warrant authorizing disbursement of the amount required. Such warrants may be issued only when Parliament is not in session and every warrant is published in the *Canada Gazette* within thirty days of issue.

The Fire Losses Replacement Account Act also provides for emergency expenditures for the urgent repair or replacement of property destroyed or damaged by fire, where there is not sufficient money available in the appropriation for the Service suffering loss. Such amounts must be charged subsequently to an appropriation or included in the Estimates for the department or agency concerned.

In addition, disbursements are made for purposes not reflected in the budgetary accounts but recorded in the Government's statement of assets and liabilities, such as loans to and investments in Crown corporations, loans to international organizations and to national, provincial and municipal governments, and loans to veterans. There are also disbursements in connection with deposit and trust accounts and annuity, insurance and pension accounts which the Government holds or administers, including the old age security fund which is operated as a separate entity. Although these disbursements are excluded from the calculation of the annual budgetary surplus or deficit, they are all subject to appropriation by Parliament either in the annual Appropriation Acts or in other legislation.

**The Budget.**—Some time after the Main Estimates have been introduced, the Minister of Finance presents his annual Budget Speech in the House of Commons. Budget papers, tabled for the information of Parliament at least one day prior to the presentation of the Budget, include a general review of economic conditions and a preliminary review of the Government's accounts for the fiscal year then ending. The Budget Speech itself reviews the state of the national economy and the financial operations of the Government for the previous fiscal year and gives a forecast of the probable financial requirements for the year ahead, taking into account the Main Estimates and making allowances for Supplementary and further Supplementary Estimates and probable lapsings. At the close of his address, the Minister tables the formal resolutions for changes in the existing tax rates and customs tariff which, in accordance with parliamentary procedure, must precede the introduction of any money Bills. These resolutions give notice of the amendments which the Government intends to ask Parliament to make in the taxation statutes. However, if a change is proposed in a commodity tax, such as a sales tax or excise duty on a particular item, it is usually made effective immediately; the legislation, when passed, is made retroactive to the date of the Speech.

The Budget Speech is delivered in support of a motion that the House go into Committee of Ways and Means, the debate on which usually lasts for several weeks. With the passage of the motion, the way is clear for the consideration of the Budget resolutions and, when these have been approved by the Committee, a report to this effect is made to the House and the tax Bills are introduced and thereafter dealt with in the same manner as all other government financial legislation.

**Revenues and Expenditures.**—The administrative procedures whereby revenues are collected and expenditures are made are, for the most part, contained in the Financial Administration Act.

With respect to revenues, the basic requirement is that all public money shall be paid into the Consolidated Revenue Fund, which is defined as the aggregate of all public money on deposit to the credit of the Receiver General. The Treasury Board has prescribed detailed regulations governing the receipt and deposit of such money. For the actual custody of public money, use is made of the Bank of Canada and the chartered banks. Balances are allocated to the various chartered banks on the basis of a percentage allocation established by agreement among all the banks and communicated to the Department of Finance by the Canadian Bankers' Association. The daily operating account is maintained with the Bank of Canada and the division of funds between it and the chartered banks takes into account the immediate cash requirements of the Government and consideration of monetary policy. The Minister of Finance may purchase and hold securities of, or guaranteed by, Canada and pay for them out of the Consolidated Revenue Fund or may

sell such securities and pay the proceeds into the Fund. Thus, if cash balances in the Fund are in excess of requirements for the immediate future they may be invested in interest-earning assets. In addition, the Minister of Finance has established a purchase fund to assist in the orderly retirement of the public debt.

The principal agencies exercising control over expenditures are the Treasury Board (previously described) and the Comptroller of the Treasury, who has the status of a deputy head but is an officer of the Department of Finance, with representatives who act as accounting and disbursing officers stationed in all the principal departments.

The Treasury Board exercises detailed central control over the budgets, programs and staffs of departments and over financial and administrative matters generally. Although the most important part of this control function is exercised during the consideration of the Estimates, the Board maintains continuous control over certain types of expenditure to ensure that the scale of activities and commitments for the future is held within approved policies, that departments follow uniform, efficient and economical practices, and that the Government is informed of and approves any major development of policy or significant transaction that might give rise to public or parliamentary criticism.

To ensure that the decisions of Parliament, the Government and Ministers in regard to expenditures are enforced, there is a centralized accounting and disbursing system. The Financial Administration Act provides that no payment shall be made out of the Consolidated Revenue Fund without the authority of Parliament and no charge shall be made against an appropriation except upon the requisition of the appropriate Minister or a person authorized by him in writing. These requisitions, and certificates that the work has been performed, the material supplied or the services rendered and that the price charged is reasonable or according to contract, together with such documents as may be required, are presented to the Comptroller of the Treasury. If the charge is a lawful one against the appropriation and does not exceed the amount of the appropriation or reduce it below the amount necessary to meet other commitments, and does not contravene any applicable legislative or executive requirements, the Comptroller will make the payment. However, if he declines to make a payment, disallows an item in an account or refuses to give a certificate, the Minister concerned may report the circumstances to the Treasury Board for decision and the Board may confirm or overrule the action of the Comptroller. The Comptroller may transmit to the Board any requisition with respect to which he desires its direction and the Board may order that payment be made or refused.

At the beginning of each fiscal year each department submits to the Treasury Board, through the Comptroller, a division or allotment of each item included in its Estimates. Once approved by the Board, these allotments cannot be varied or amended without the approval of the Board and expenditures charged to appropriations are limited to such allotments. To avoid over-expenditures within a fiscal year, the Comptroller records and controls commitments due to come in course of payment within the year for which Parliament has provided or has been asked to provide appropriations. The Government, through the Treasury Board and the Comptroller, also maintains careful control over commitments made under contract that will fall due in succeeding years, since it must be prepared in future to ask Parliament for appropriations to cover them. Any unexpended amounts in the annual appropriations lapse at the end of the year for which they are granted, but for thirty days subsequent to Mar. 31 payments may be made and charged to the previous year's appropriations for debts incurred prior to the end of that fiscal year.

Under the Financial Administration Act, every payment pursuant to an appropriation is made under the control and direction of the Comptroller by cheque drawn on the account of the Receiver General or by such other instrument as the Treasury Board may direct. In practice, the paid Comptroller's cheques are cleared daily by the chartered banks through the Bank of Canada to the Cheque Adjustment Branch of the Comptroller's Office, and reimbursement is made by means of a cheque drawn on the Receiver General's account with the Bank of Canada.

**Public Debt.**—In addition to the collection and disbursement of public money for budgetary and non-budgetary purposes, the Government receives and disburses substantial sums in connection with its public debt operations. The Minister of Finance is authorized to borrow money by the issue and sale of securities at such rate of interest and subject to such terms and conditions as the Governor in Council may approve. Although the specific authority of Parliament is required for new borrowings, the Financial Administration Act authorizes the Governor in Council to approve the borrowing of such sums of money as are required for the redemption of maturing or called securities and, to ensure that the Consolidated Revenue Fund will be sufficient to meet lawfully authorized disbursements, he may also approve the temporary borrowing of such sums as are necessary for periods not exceeding six months. The Bank of Canada acts as the fiscal agent of the Government in the management of the public debt.

**Accounts and Financial Statements.**—Under the Financial Administration Act, accounts are kept to show the revenues of Canada, the expenditures made under and the commitments chargeable against each appropriation, the other payments into and out of the Consolidated Revenue Fund, and such of the assets and direct and contingent liabilities as the Minister of Finance believes are required to give a true and fair view of the financial position of Canada. The statement of assets and liabilities is designed to disclose the amount of the net debt, which is determined by offsetting against the gross liabilities only those assets regarded currently as readily realizable or interest- or revenue-producing. Fixed capital assets, such as government buildings and public works, are charged to budgetary expenditures at the time of acquisition or construction and are shown on the statement of assets and liabilities at a nominal value of \$1.

Annually, on or before Dec. 31 or, if Parliament is not then in session, within fifteen days after the commencement of the ensuing session, the *Public Accounts* is laid before the House of Commons by the Minister of Finance. The *Public Accounts* contains a survey of the financial transactions of the fiscal year, statements of the revenues and expenditures for the year and of the assets and direct and contingent liabilities as at the end of the year, together with such other accounts and information as are necessary to show the financial transactions and financial position of Canada or which are required by law to be reported in the *Public Accounts*. Monthly financial statements are also published in the *Canada Gazette*.

**The Auditor General.**—The Government's accounts are subject to an independent examination by the Auditor General who is an officer of Parliament. With respect to expenditures, this examination is a post-audit for the purposes of reporting whether the accounts have been faithfully and properly kept and whether the money has been expended for the purposes for which it was appropriated by Parliament and the expenditures have been made as authorized; any audit before payment is the responsibility of the Comptroller of the Treasury. With respect to revenues, the Auditor General is required to ascertain that all public money is fully accounted for and that the rules and procedures applied are sufficient to ensure an effective check on the assessment, collection and proper allocation of the revenue. With respect to public property, he is required to satisfy himself that essential records are maintained and that the rules and procedures applied are sufficient to safeguard and control such property. The Auditor General reports to Parliament the results of his examination, calling attention to any case which he considers should be brought to the notice of the House. He also reports to Ministers, the Treasury Board or the Government any matter which in his opinion calls for attention so that remedial action may be taken promptly.

**Public Accounts Committee.**—It is the usual practice to refer the *Public Accounts* and the *Auditor General's Report* to the Public Accounts Committee of the House of Commons, which may review them and report its findings and recommendations to the House of Commons.

## Section 2.—Departments, Boards, Commissions, etc.\*

The following paragraphs indicate the functions of the various departments of government and the special boards and commissions in connection with the work of government.

Although it is not possible, owing to the limitations of space, to enumerate in this Section the details of each service or the divisions or sections of all departments, the main branches are given along with those services that differ in some quality from the larger class of subjects handled by a department. The work of many of these departments and boards is given in detail in later Chapters of this volume. The Index will be useful in locating required information.

**Department of Agriculture.**—This Department was established in 1867 (SC 1868, c. 53) and undertakes work on all phases of agriculture. Research and experimentation are carried out by the Research Branch; the maintenance of standards and protection of products by the Production and Marketing Branch and the Health of Animals Branch; the Canada Grain Act, as it pertains to the inspection, weighing, storage and transportation of grain, is administered by the Board of Grain Commissioners; land reclamation and development is carried out by the Prairie Farm Rehabilitation Administration; and farm income security and price stability are provided under the Crop Insurance Act, the Prairie Farm Assistance Act, the Agricultural Stabilization Act and the Agricultural Products Board. The Farm Credit Corporation and the Board of Grain Commissioners report to Parliament through the Minister of Agriculture.

**Air Transport Board.**—The Air Transport Board was established in 1944 by amendment of the Aeronautics Act. The Board is responsible for the economic regulation of commercial air services in Canada and for advising the Minister in the exercise of his duties and powers under the Act in all matters relating to civil aviation. The regulatory function relates to Canadian air services within Canada and abroad, and to foreign air services operating into and out of Canada. It involves the licensing of all such services and the subsequent regulation of the licensees in respect of their economic operation and the provision of service to the public. The Board reports to Parliament through the Minister of Transport.

**Auditor General's Office.**—This Office originated in 1878 (SC 1878, c. 7) and currently functions under the Financial Administration Act (RSC 1952, c. 116). The Auditor General is responsible for examining accounts relating to the Consolidated Revenue Fund and to public property, and for reporting annually to the House of Commons the results of his examinations. He also audits the accounts of various Crown corporations and other instrumentalities.

**Board of Broadcast Governors.**—This Board, established under the provisions of the Broadcasting Act which was assented to on Sept. 6, 1958, is given authority to regulate radio and television broadcasting in Canada. The Board has authority to regulate the establishment and operation of both public and private broadcasting stations and networks of stations. Applications for licences to establish new broadcasting stations, for changes in the facilities of existing stations or for changes in the ownership or in the share structure of licensees are referred to the Board by the Minister of Transport for a recommendation before being dealt with. The Board has three full-time and twelve part-time members. The Secretary of State acts as spokesman for the Board in the Cabinet and the House of Commons.

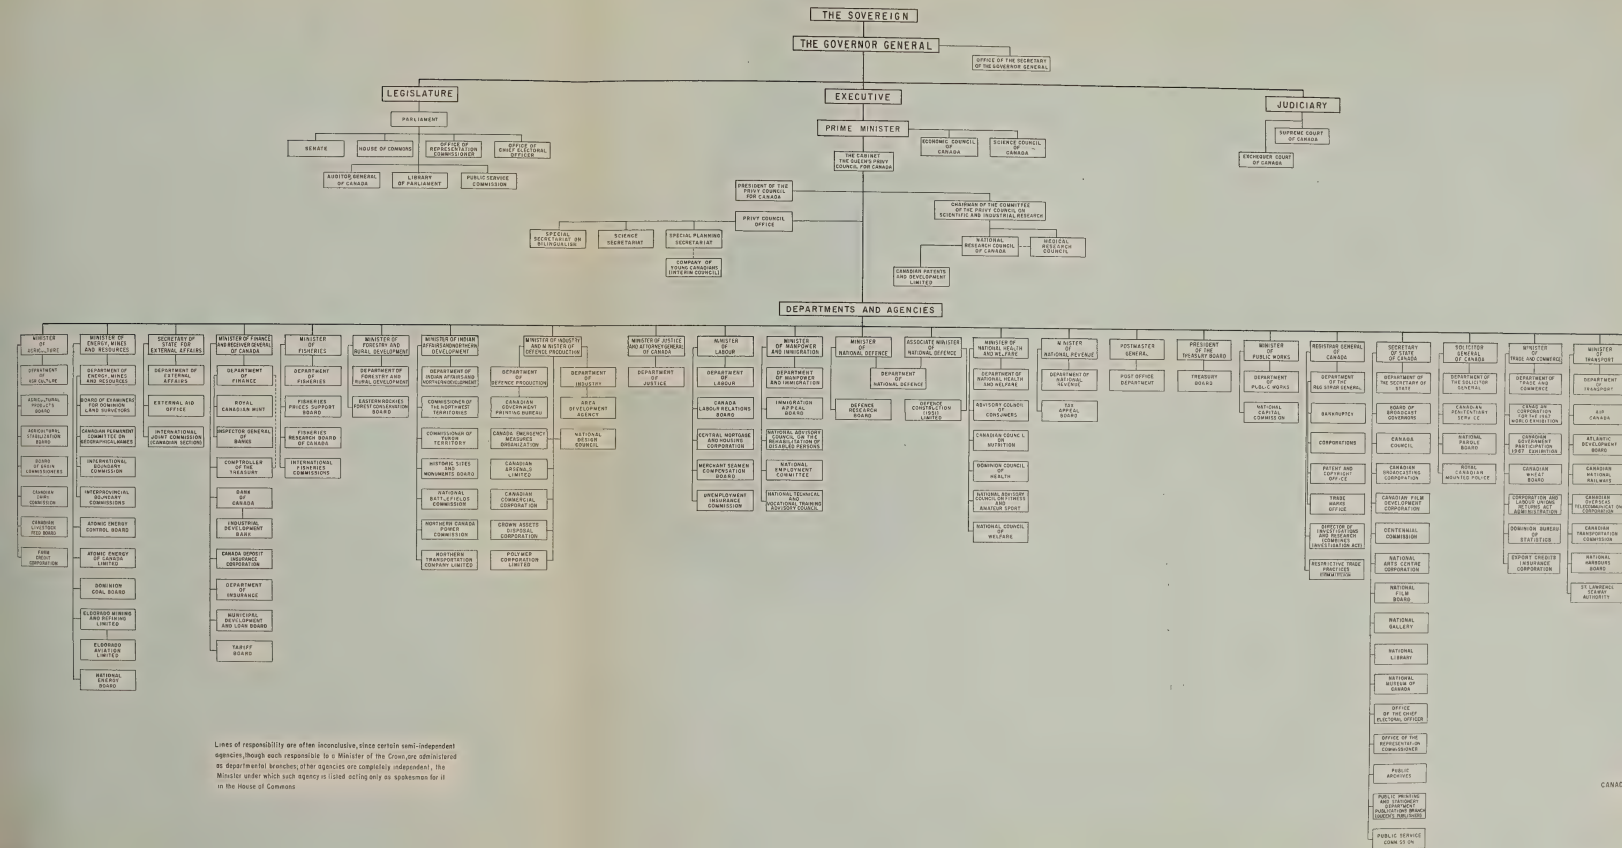

**Board of Grain Commissioners.**—Constituted in 1912 under the Canada Grain Act (RSC 1952, c. 25), the Board of Grain Commissioners for Canada provides general supervision over the physical handling of grain in Canada by licensing elevator operators, inspecting and weighing grain received at and shipped from terminal elevators, and other services. The Board, comprising a Chief Commissioner and two Commissioners, has authority to inquire into any matter relating to the grading and weighing of grain, deductions for dockage or shrinkage, deterioration of any grain during storage or treatment, unfair or discriminatory operation of a grain elevator, etc. The Board publishes its regulations in the *Canada Gazette* and reports to Parliament through the Minister of Agriculture.

**Board of Transport Commissioners for Canada.**—The powers of this Board, which was organized as the Board of Railway Commissioners in 1904, have been extended from time to time until today it has regulatory and judicial functions dealing with almost all aspects of railway activity including location, construction and operation of lines, rates and charges. It is also entrusted with the regulation of other transportation and communication agencies, including express companies, telegraph companies, telephone companies other than those provincially or municipally controlled, international bridges and tunnels and inland shipping. The Board reports to Parliament through the Minister of Transport.

\*As at Oct. 1, 1966; any major changes taking place between that date and the time of going to press will be carried in an Appendix to this volume. Also, the accompanying organization chart is brought up to the latest possible date before going to press; see lower right-hand corner.

THE GOVERNMENT OF CANADA

**Canada Emergency Measures Organization.**—This Organization was established in June 1957 to co-ordinate civil emergency planning at the federal level. An Order in Council, effective Sept. 1, 1959, completely revised assignments in the field of civil emergency planning giving responsibilities to 15 departments and agencies of government and giving responsibility, under the Prime Minister, for co-ordination to the Emergency Measures Organization. By Order in Council PC 1963-993 the powers, duties and functions of the Prime Minister relating to civil defence and control of the Emergency Measures Organization were transferred to the Minister of Defence Production. In June 1965, previous Orders were revoked and replaced by the Civil Emergency Measures Planning Order PC 1965-1041, which schedules civil emergency powers, duties and functions to 12 federal departments and four agencies. The Planning Order directs that the Minister of Industry, through the Emergency Measures Organization, shall develop policies and a program to ensure continuity of government in an emergency; co-ordinate civil emergency planning and training by departments and agencies of the Government of Canada; plan, in conjunction with provincial authorities, for the control of civil road transport in an emergency; plan civil emergency measures in respect to matters which are not the responsibility of any department, agency or Crown corporation of the Government; provide assistance and guidance to provincial and municipal governments in civil emergency planning matters; provide general liaison with other countries and with NATO on matters relating to civil emergency planning; and be responsible for the direction and administration of the Canadian Civil Defence College. In June 1965, the name of the Organization was changed to Canada Emergency Measures Organization and the name of the college to Canadian Emergency Measures College.

**Canadian Government Printing Bureau.**—The printing functions formerly provided by the Department of Public Printing and Stationery were transferred by Order in Council (PC 1963-1254) dated Aug. 21, 1963, to the Department of Defence Production. The latter Department, on Apr. 1, 1964, authorized the organization of the Canadian Government Printing Bureau as a distinct function under that Department, to be separated from the former Publications Branch and the Purchasing Stationery and Stores Branch of the Department of Public Printing and Stationery.

The Canadian Government Printing Bureau, under the direction of a General Manager, provides a variety of printing services, such as House of Commons Debates, Votes and Proceedings, Orders of the Day and other parliamentary papers for both Houses of Parliament, and other printing requirements of government departments and agencies. The main plant is located in Hull, Que.; smaller field units are located in the Ottawa area and in other major centres to handle the duplicating requirements of individual government departments.

**Canadian Penitentiary Service.**—The Penitentiary Service operates under the Penitentiary Act (SC 1960-61, c. 53) and is under the jurisdiction of the Solicitor General of Canada. It is responsible for all federal penitentiary institutions and for the care and training of persons sentenced or committed thereto. The Commissioner of Penitentiaries, under the direction of the Solicitor General, has control and management of the Service and all matters connected therewith.

**Canadian Pension Commission.**—This Commission, established in 1933 by amendments to the Pension Act (RSC 1952, c. 207), replaced the Board of Pension Commissioners, the first organization created to deal solely with war pensions for service in Canada's Armed Forces. The Commission's main function is the administration of the Pension Act under which it adjudicates upon all claims for pension in respect of disability or death arising out of service in Canada's Armed Forces; and Parts I to X inclusive of the Civilian War Pensions and Allowances Act, which provide for the payment of pensions in respect of death or disability arising out of civilian service directly related to the prosecution of World War II. It also adjudicates on claims for pension under various other measures; authorizes and pays monetary grants accompanying certain gallantry awards bestowed on members of the Armed Forces; and administers various trust funds established by private individuals for the benefit of veterans and their dependants. The Commission consists of eight to twelve Commissioners and up to five *ad hoc* Commissioners appointed by the Governor in Council. Its chairman has the rank of a Deputy Head of a department and the Commission reports to Parliament through the Minister of Veterans Affairs.

**Department of Defence Production.**—The Department of Defence Production was established in April 1951 by the Defence Production Act (SC 1951, c. 4—now the Defence Production Act, RSC 1952, c. 62, as amended by SC 1955, c. 52). It has exclusive authority for the procurement of goods and services required by the Department of National Defence and, in addition, has the responsibility for ensuring that necessary production capacity and materials are available in Canada to support the defence production program. Measures for which the Department is responsible include defence equipment export activities, the establishment of arrangements with the United States and other friendly countries for co-operative efforts in defence industrial research, development and production, and the management of Canadian participation in the co-operative endeavours of the NATO Armaments Committee.

On Sept. 4, 1963, the Government gave to the Department the responsibility for implementing certain recommendations of the Royal Commission on Government Organization relating to the formation of a central purchasing and supply agency. In essence this required that the existing structure of the Department be gradually reshaped in order to accept the function of procurement on behalf of all civilian departments and agencies other than commercially oriented Crown corpora-

tions, and the civilian supply function. To meet this responsibility there have been established within the Department a Canadian Government Purchasing Service, a Canadian Government Supply Service and a Canadian Government Repair Service which are being developed to form a future Department of Supply.

The Canadian Government Purchasing Service consists of five operational branches: Aircraft, Electrical and Electronics, Machinery, Shipbuilding and Heavy Equipment and General Purchasing. The Canadian Government Supply Service consists of six headquarters branches, a Regional Supply Centre operated as a pilot operation in Ottawa, a system of regional purchasing offices in Canada, the United States and Europe, and the Crown Assets Disposal Corporation. The six headquarters branches are: Regional Purchasing, Warehousing and Distribution, Specifications and Standards, Traffic Management, Cataloguing and Quality Management. The Canadian Government Repair Service provides maintenance, repair and overhaul services and technical advice to Federal Government departments and agencies for all non-military machines, equipment and other products located in Canada.

The service and advisory functions of the Department are performed by the Contracts Approval Board, the Contract Policy Group, the Legal Adviser and the following branches: Comptroller, Contracts, General Services, Management Control, Management Services and Personnel.

The Emergency Supply Planning Branch is responsible for planning a War Supply Agency which, in the event of a nuclear war, would exercise control over the production, distribution and pricing of civil and military supplies.

The following Crown companies and agencies report to Parliament through the Minister of Defence Production: Canadian Arsenals Limited, Crown Assets Disposal Corporation, Polymer Corporation Limited, Canadian Commercial Corporation and Canada Emergency Measures Organization. The Canadian Government Printing Bureau is also responsible to the Department of Defence Production.

**Dominion Bureau of Statistics.**—The Dominion Bureau of Statistics was set up by statute in 1918 as a central statistical department for Canada (SC 1918, c. 43). In 1948 this statute, which had been consolidated as the Statistics Act (RSC 1927, c. 190), was repealed and replaced by the Statistics Act (RSC 1952, c. 257); it was amended by SC 1952-53, c. 18, assented to Mar. 31, 1953.

The function of the Dominion Bureau of Statistics is to compile, analyse and publish statistical information relative to the commercial, industrial, financial, social and general condition of the people and to conduct regularly a census of population and agriculture of Canada as required under the Act.

The Bureau is a major publication agency of the Federal Government; its reports cover all aspects of the national economy. The administrative head of the Bureau is the Dominion Statistician who has the rank of a Deputy Head of a department and reports to Parliament through the Minister of Trade and Commerce.

**Department of Energy, Mines and Resources.**—Under the terms of the Government Organization Act (SC 1966, c. 25), the Department of Energy, Mines and Resources supersedes the Department of Mines and Technical Surveys and encompasses certain functions formerly conducted by other departments and agencies. The Department, in addition to its administrative services, is organized into four groups: the Research Group includes the Geological Survey of Canada Branch, the Mines Branch, the Surveys and Mapping Branch, the Observatories Branch and the Geographical Branch, all of which are engaged in research and the provision of information in their respective fields; the Mineral Development Group includes the Mineral Economics Branch, which gathers economic data for all minerals for use of government, industry and the public and conducts administrative functions of resource management, and the Explosives Division which controls, under the provisions of the Explosives Act, the production and handling of explosives; the Water Group is concerned with all types of water matters including groundwater and oceanic investigations and surveys, water pollution, water power, water conservation and control, and federal-provincial and international studies and regulations; the Energy Development Group recommends and advises on energy policies in the total context of all energy sources and future energy requirements.

The following Crown corporations report to Parliament through the Minister of Energy, Mines and Resources: the National Energy Board, the Dominion Coal Board, Atomic Energy of Canada Limited, Eldorado Mining and Refining Limited, Eldorado Aviation Limited and the Atomic Energy Control Board.

**Department of External Affairs.**—This Department was established in 1909 by "An Act to create a Department of External Affairs" (RSC 1952, c. 68). Its main function is the protection and advancement of Canadian interests abroad. The Minister responsible for the Department is the Secretary of State for External Affairs. The senior permanent officer (Deputy Minister) of the Department, the Under-Secretary of State for External Affairs, is assisted by a Deputy Under-Secretary and by four Assistant Under-Secretaries and is advised by the officers in charge of the various divisions. The divisional heads are each responsible for a part of the work of the Department and they are assisted by Foreign Service Officers, External Affairs Officers, other administrative officers and an administrative staff. Officers serving abroad are formally designated as High Commissioners, Ambassadors, Ministers, Counsellors, First Secretaries, Second Secretaries, Third

Secretaries and Attachés at diplomatic posts and Consuls General, Consuls and Vice-Consuls at consular posts. There are 85 diplomatic, consular and other missions maintained abroad by the Department. In 39 additional countries, Canada is represented by non-resident Ambassadors or High Commissioners.

The work of the Department at Ottawa is performed by 26 divisions and three units. The divisions may be grouped into three categories—area, functional and administrative. There are six area divisions—African and Middle Eastern, Commonwealth, European, Far Eastern, Latin American and United States; fourteen functional divisions—Communications, Consular, Cultural Affairs, Defence Liaison (1), Defence Liaison (2), Disarmament, Economic, Historical, Information, Legal, Passport, Press and Liaison, Protocol and United Nations; and six administrative divisions—Administrative Services, Finance, Personnel Operations, Personnel Services, Registry, and Supplies and Properties. The three units are the Inspection Service, the Organization and Methods Unit and the Administrative Improvement Unit.

The International Joint Commission reports to the Secretary of State for External Affairs of Canada as well as to the Secretary of State of the United States. The Secretary of State for External Affairs reports to Parliament for the External Aid Office.

**Department of Finance.**—This Department was created by Act of Parliament in 1869 and now operates under the Financial Administration Act (RSC 1952, c. 116). The Department is responsible for the financial administration of Canada including the raising of money required for the various governmental activities by way of taxation or borrowing. The Comptroller of the Treasury, an officer of the Department, is responsible for all government disbursements. The work of the Department is organized into the following divisions: Tax Policy, Federal-Provincial-Municipal Relations, Social Security and Pensions, Economic Analysis, Government Finance and Government Guaranteed Loans, Tariffs, International Economic Relations, Resources and Development, and International Programmes. The Royal Canadian Mint is a branch of the Department as is the Inspector General of Banks. The Tariff Board, the Municipal Development and Loan Board, the Bank of Canada and its subsidiary the Industrial Development Bank, and the Department of Insurance report to Parliament through the Minister of Finance who is also the spokesman in the Cabinet and the House of Commons for the Auditor General of Canada.

**Department of Fisheries.**—The Department of Fisheries was first organized under a Minister of Fisheries in 1930. Prior to that date the federal fisheries services were maintained by the former Department of Marine and Fisheries, established in 1868. The provinces, under various arrangements, have certain administrative responsibilities in the fisheries but the legislative authority for the regulation of coastal and freshwater fisheries is with the federal Department of Fisheries.

The work of the Department includes: resource development and conservation protection of the fisheries through the enforcement of fishing regulations, the operation of fish culture establishments, management and improvement of spawning streams and control of predators; inspection of fish products for quality control and the encouragement of industrial development; promotion of the greatest utilization of fishery products and a proper public understanding of the resource and the industry. The Department administers the Fishermen's Indemnity Plan to assist fishermen in the event of loss or serious damage to their fishing vessels or lobster traps.

Agencies connected with the Department are the Fisheries Prices Support Board and the Fisheries Research Board of Canada. The Department is represented on the following international commissions: Pacific Salmon Fisheries, Pacific Halibut, Northwest Atlantic Fisheries, North Pacific Fisheries, Whaling, Great Lakes Fishery, and North Pacific Fur Seal.

**Fisheries Research Board.**—The Fisheries Research Board of Canada operates under the Fisheries Research Board Act of 1937 (amended in 1947 and 1952-53). It has been active as a fisheries research body since 1898, first as the Board of Management of the Canadian Marine Biological Station and later (1912) as the Biological Board of Canada. The Board operates under the Minister of Fisheries and membership consists of a full-time chairman and not more than 18 other members. The majority of Board members are university scientists, and other members are representative of the fishing industry and the Department of Fisheries.

The Board, with headquarters in Ottawa, operates research establishments in St. John's, Nfld., Halifax and Dartmouth, N.S., St. Andrews, N.B., Ellerslie, P.E.I., Grande-Rivière and Ste. Anne de Bellevue, Que., Winnipeg, Man., Vancouver and Nanaimo, B.C. Board scientists carry out research on distribution of fish stocks, biology and life history of fishes, marine mammals and other aquatic creatures and plants, oceanography, fishing techniques, quality and nutritive value of fisheries products, with the principal objective of increasing the scope and value of Canadian fisheries.

**Department of Forestry and Rural Development.**—This Department was established in October 1960 to bring under one Ministry the conduct of programs of research relating to forest management, silviculture, protection against fire, insects and disease, and the improvement in the standards of wood utilization and development of forest products. By Order in Council of Mar. 5, 1964, the responsibilities of the Minister of Forestry were expanded to include the functions formerly exercised by the Minister of Agriculture respecting certain rural development programs under the Agricultural Rehabilitation and Development Act (ARDA), the Maritime Marshland Rehabili-

tation Act, and the administration of the program of freight assistance and grain storage costs on western feed grains. The name of the ARDA was changed in 1966 (SC 1966, c. 11) to Agricultural and Rural Development Act (ARDA) and the name of the Department was changed under the terms of the Government Organization Act, 1966 (SC 1966, c. 25) to Department of Forestry and Rural Development.

The Forestry Branch of the Department, in addition to the above functions, carries out economic studies of the forest resources and of the forest industries. Financial assistance is offered to the provinces toward meeting specific forestry needs. The Department conducts forest surveys and provides technical assistance to other agencies of the Federal Government responsible for administration of forest lands, and co-operates with international organizations concerned with forestry in which Canada maintains membership. The Department acts as co-ordinator for the seven-agency Technical Committee for Watershed Research of the Eastern Rockies Forest Conservation Board.

The ARDA program of the Department is joined with existing programs of resource management and economic development to provide public assistance in meeting problems of physical, economic and social adjustment in rural areas. It also includes a program of soil and water conservation aimed at increasing the productivity of basic rural resources. Through a central and developing information program, the Department seeks to promote public understanding of the value of the forest resources and, in co-operation with the provinces, of the work and purpose of the ARDA program.

The Department administers the Fund for Rural Economic Development Act, 1966 (SC 1966, c. 41), which provides for the establishment of a fund not exceeding \$50,000,000 for the economic and social development of special rural development areas. Under this Act the Minister of Forestry and Rural Development may, on the recommendation of the Advisory Board and with the approval of the Governor in Council, enter into an agreement with any province for the joint undertaking of a rural development program in a special rural development area, or may contribute to the cost of such a program undertaken by the province. The Advisory Board consists of not more than ten officials of departments or agencies of the Government of Canada, appointed by the Governor in Council.

The Minister of Forestry and Rural Development reports to Parliament for the Eastern Rockies Forest Conservation Board.

**Department of Indian Affairs and Northern Development.**—The Department of Indian Affairs and Northern Development was established in June 1966 under the terms of the Government Organization Act (SC 1966, c. 25), superseding the Department of Northern Affairs and National Resources. In addition to the Financial and Management Services, the Department is divided into four Branches: the Natural and Historic Resources Branch, which administers the National Parks, the National Historic Parks and the National Historic Sites coming within the jurisdiction of the Federal Government; the Northern Administration Branch, which is responsible for the administration of various federal Acts, territorial ordinances and regulations pertaining to the Government of the Northwest Territories, for the conduct of certain business arising from the general administration of the Yukon Territory, for the administration of natural resources in those Territories, and for Eskimo affairs; the Indian Affairs Branch, which has the responsibility of assisting the Indians through programs in the field of education, economic development, social welfare and community development so that they may share the rights and responsibilities of citizenship and participate on the basis of equality and opportunity through the full spectrum of Canadian life; and the Canadian Wildlife Service, which conducts research on the fauna of Canada and maintains liaison with other international, national, provincial and private agencies and organizations that deal with wildlife.

The Commissioner of the Northwest Territories and the Commissioner of Yukon Territory report to Parliament through the Minister of Indian Affairs and Northern Development. The Minister is also responsible to Parliament for the Northern Canada Power Commission, the National Battlefields Commission, the Historic Sites and Monuments Board of Canada which is an honorary body of recognized historians representing the various provinces, and the Northern Transportation Company Limited. The Advisory Committee on Northern Development acts in an advisory capacity to the Minister. The Deputy Minister is Chairman of the Northern Canada Power Commission.

**Department of Industry.**—Under the Department of Industry Act (SC 1963, c. 3), the Minister of Industry is responsible for promoting the establishment, growth, efficiency and improvement of manufacturing industries in Canada through the development and implementation of programs to assist manufacturers to adjust to changing market conditions, to help them develop new lines of production and enter new markets, and to promote greater industrial research and development as well as good design within Canadian industry.

The Department of Industry is also responsible for undertaking research and investigations on an area or regional basis and preparing programs of development for designated areas of high unemployment and slow economic growth. As a part of these programs, various Federal Government incentive measures are administered.

The Department is organized into ten industry branches: Aircraft, Chemicals, Apparel and Textiles, Electrical and Electronics, Food Products, Machinery, Materials, Mechanical Transport, Shipbuilding and Heavy Equipment, and Wood Products (see also Department of Defence Pro-

duction, p. 131). The Area Development Agency carries out the work associated with regional programs and the National Design Branch, in co-operation with the National Design Council, undertakes programs to promote and encourage good design in Canadian products.

The Program Advisory Group consists of a small number of officers experienced in economics, commercial policy, industrial research and development. Their function is to advise the Department in these areas and to co-ordinate departmental programs related to them.

**Department of Insurance.**—The Minister of Finance is responsible for the Department of Insurance which originated in 1875 as a branch of the Department of Finance but was constituted a separate Department in 1910. It is authorized and governed by the Department of Insurance Act (RSC 1952, c. 70). Under the Superintendent of Insurance, who is the Deputy Head, the Department administers the statutes of Canada applicable to: insurance, loan and trust companies incorporated by the Parliament of Canada; provincially incorporated insurance companies registered with the Department; British and foreign insurance companies operating in Canada; small loans companies and money-lenders; co-operative credit societies registered under the Co-operative Credit Associations Act; and public service insurance.

Under the relevant provincial statutes, the Department examines trust companies incorporated in the Provinces of Manitoba and New Brunswick and loan and trust companies incorporated in the Province of Nova Scotia.

**International Joint Commission.**—This Commission was established under a Britain-United States treaty signed Jan. 11, 1909 and ratified by Canada in 1911. The Commission, composed of six members (three appointed by the President of the United States and three by the Government of Canada), is governed by five specific Articles of the Boundary Waters Treaty of 1909. The Commission's approval is required for any use, obstruction or diversion of boundary waters affecting the natural level or flow of boundary waters in the other country; and for any works in waters flowing from boundary waters or below the boundary in rivers flowing across the boundary which raise the natural level of waters on the other side of the boundary.

Problems arising along the common frontier are also referred to the Commission by either country for examination and report, such report to contain appropriate conclusions and recommendations. In addition, questions or matters of difference between the two countries may be referred to the Commission for decision, provided both countries consent.

The Commission reports to the Secretary of State for External Affairs of Canada and to the Secretary of State of the United States.

**Department of Justice.**—This Department, established by SC 1868, c. 39, now operates under authority of the Department of Justice Act (RSC 1952, c. 71 as amended by SC 1960, c. 4 and SC 1966, c. 25). The Minister of Justice is the official legal adviser of the Governor General and the legal member of the Queen's Privy Council for Canada. It is his duty to see that the administration of public affairs is in accordance with law, to superintend all matters connected with the administration of justice in Canada that are not within the jurisdiction of the provincial governments, to advise upon the legislation and proceedings of the provincial legislatures and generally to advise the Crown upon all matters of law referred to him by the Crown. The Minister of Justice is, ex officio, Her Majesty's Attorney General of Canada. In this capacity it is his duty to advise the heads of the departments of the Government of Canada upon all matters of law connected with such departments, to settle and approve all instruments issued under the Great Seal of Canada, and to regulate and conduct all litigation for or against the Crown in the right of Canada.

**Department of Labour.**—The Department of Labour was established in 1900 by Act of Parliament (SC 1900, c. 24) and now operates under authority of the Department of Labour Act (RSC 1952, c. 72). The Department administers, under the Minister of Labour, legislation dealing with: industrial relations, investigation of disputes, etc.; fair employment practices; the regulation of fair wages and hours of labour; female employee equal pay; government annuities; government employee compensation; merchant seamen compensation; and hours of work, minimum wages, annual vacations and holidays with pay. It promotes joint consultation with industry through labour-management committees and operates a Women's Bureau. The Department publishes the *Labour Gazette* and other publications, as well as general information on labour-management, employment, manpower and related subjects.

The Merchant Seamen Compensation Board reports to the Minister of Labour. The Department is the official liaison agency between the Canadian Government and the International Labour Organization. The Unemployment Insurance Commission, the Chairman of the Board of Trustees of the Maritime Transportation Unions, the Central Mortgage and Housing Corporation and the Canada Labour Relations Board report to Parliament through the Minister of Labour. The Canada Labour Relations Board administers certain provisions of the Industrial Relations and Disputes Investigation Act.

**Library of Parliament.**—The Library of Parliament as such was established in 1871 (SC 1871, c. 21) although it existed earlier. It currently functions under RSC 1952, c. 166 and SC 1955, c. 35. The Library of Parliament keeps all books, maps and other articles that are in the joint possession of the Senate and the House of Commons. The Parliamentary Librarian is also re-

sponsible for the House of Commons Reading Room. Persons entitled to borrow books from the Library of Parliament are the Governor General, Members of the Privy Council, Members of the Senate and the House of Commons, Officers of the two Houses, Justices of the Supreme Court of Canada and the Exchequer Court, and members of the Press Gallery. In addition, books are lent to other libraries and government agencies and reference service is given to scholars. A special research branch serves Parliamentarians only. The Parliamentary Librarian has the rank of a Deputy Head of a department and is responsible for the control and management of the Library under the Speaker of the Senate and the Speaker of the House of Commons assisted by a Joint Committee appointed by the two Houses.

**Department of Manpower and Immigration.**—This Department was constituted in June 1966 by the Government Organization Act (SC 1966, c. 25), which was proclaimed effective on Oct. 1, 1966, under the Minister of Manpower and Immigration. The Department is composed of two operational services and four support services. The Canadian immigration service administers the Immigration Act and Regulations and is responsible for the selection, examination and movement of immigrants and for the exclusion or deportation of undesirables. The Department's employment service is responsible for: the manpower mobility program; assisting in the recruitment and placement of workers to meet industry's requirements; community adjustment of immigrants and migrants; occupational and job classifications and descriptions; selection techniques; testing methods; vocational and technical training, rehabilitation of the vocationally handicapped; and municipal winter works incentive programs and winter employment campaigns. The Department also has a service which is responsible for the development and evaluation of departmental programs; research; the operation of pilot projects in training and other areas; legislation and legal services; and emergency manpower planning at the national level. Other support services are Financial and Management; Personnel; and Information.

The Canadian immigration service, until Oct. 1, 1966, was part of the Department of Citizenship and Immigration which has been renamed the Department of Manpower and Immigration; the majority of the other components of the Department were, prior to Oct. 1, 1966, under the jurisdiction of the Department of Labour.

The Immigration Appeal Board, which deals with appeals made against Orders of Deportation, reports to the Minister of Manpower and Immigration. The National Advisory Committee on the Rehabilitation of Disabled Persons, the National Technical and Vocational Training Advisory Council and the National Employment Committee act in an advisory capacity to the Minister.

**Department of National Defence.**—The Department of National Defence and the Canadian Forces operate under the National Defence Act (RSC 1952, c. 184). The Canadian Forces are administered by the Minister of National Defence and the Associate Minister of National Defence. Since August 1964, when a single Chief of the Defence Staff was appointed, the reorganization of the Canadian Forces Headquarters, the command structure and the consolidation of the Canadian Forces Bases has been proceeding. In June 1965, a plan was announced to reduce the previous major commands in Canada to six: Maritime, Mobile, Air Transport, Air Defence, Training and Materiel. This accomplished, the stage has been reached for final steps toward a single unified force.

The Defence Research Board, created in 1947 to carry out research relating to national defence and to advise the Minister on all relevant matters of a scientific or technical nature, functions under the National Defence Act. The Crown corporation, Defence Construction (1951) Limited, reports to Parliament through the Associate Minister of National Defence.

**National Energy Board.**—This Board was established under the National Energy Board Act, 1959 for the broad purpose of assuring the best use of energy resources in Canada. The Board, composed of five members, is responsible for the regulation of the construction and operation of the oil and gas pipelines that are under the jurisdiction of the Parliament of Canada, the tolls charged for transmission by oil and gas pipelines, the export and import of gas and the export of electric power, and the construction of the lines over which such power is transmitted. The Board is also required to study and keep under review all matters relating to energy under the jurisdiction of the Parliament of Canada and to recommend such measures as it considers necessary and advisable on the subject. The Board reports to Parliament through the Minister of Energy, Mines and Resources.

**National Film Board.**—The National Film Board, established in 1939, operates under the National Film Act (RSC 1952, c. 185) which provides for a Board of Governors of nine members—a Government Film Commissioner, appointed by the Governor in Council, who is chairman of the Board, three members from the public service of Canada and five members from outside the public service. The Board reports to Parliament through the Secretary of State. The Board is responsible for advising the Governor in Council on film activities and is authorized to produce and distribute films in the national interest and, in particular, films "designed to interpret Canada to Canadians and to other nations".

**Department of National Health and Welfare.**—This Department was established in October 1944 under authority of the Department of National Health and Welfare Act (RSC 1952, c. 74).

It was originally formed as the Department of Health in 1919 and later became part of the Department of Pensions and National Health. That Department was replaced in 1944 by the Department of National Health and Welfare and the Department of Veterans Affairs.

The Department, headed by the Minister of National Health and Welfare, is composed of three branches—Administration, Health and Welfare—and is administered by two Deputy Ministers.

The Department has charge of all matters relating to the promotion or preservation of the health, social security and social welfare of the people of Canada over which the Federal Parliament has jurisdiction. It administers the Acts listed in Sect. 4, p. 153, and is also responsible for: the administration of the National Health Program under which grants are made available to the provinces for the development and extension of health services; the federal aspects of emergency health and welfare services; health and safety in the peaceful uses of atomic energy and other sources of radiation affecting the population; the provision of health, medical and hospital services to Indians and Eskimos and to other elements of the population in the Yukon and Northwest Territories; the provision of assistance and consultative services to the provinces upon request on blindness control, child and maternal health, environmental health, mental health, dental health, nursing, medical rehabilitation, bacteriology, virology, parasitology and clinical chemistry, zoonoses, nutrition and health facilities design; the inspection and medical care of immigrants and seamen and the administration of marine hospitals; the supervision of public health facilities on railway, water and other forms of transportation; the enforcement of regulations of the International Joint Commission relating to public health; the promotion and conservation of the health of government employees; the collection, publication and distribution, subject to the provisions of the Statistics Act, of information relating to public health, improved sanitation and social and industrial conditions affecting the health of Canadians. It co-ordinates and assists international welfare activities in which Canada is engaged and administers a system of grants to the provinces for professional welfare training, welfare research and general welfare services.

**National Library.**—The National Library came formally into existence on Jan. 1, 1953, with the proclamation of the National Library Act (RSC 1952, c. 330). It publishes *Canadiana*, a monthly catalogue of new publications relating to Canada, with an annual cumulation. The Library also publishes other bibliographies. Its Reference Division maintains the *National Union Catalogue*, which embodies the author catalogues of the major libraries in the ten provinces and is thus a key to the book collections of the whole country. Its book collection is growing steadily and at the end of 1965 consisted of over 300,000 volumes. The National Librarian reports to Parliament through the Secretary of State.

**National Parole Board.**—The establishment of the National Parole Board, which was formed in January 1959, is authorized by the Parole Act (SC 1958, c. 38) by which it is given absolute jurisdiction over all matters of parole. It is composed of a chairman and four members appointed by Order in Council for a ten-year period. The Board reports to Parliament through the Solicitor General of Canada.

**Department of National Revenue.**—From Confederation until May 1918, customs and inland revenue Acts were administered by separate departments; after that date they were amalgamated under one Minister as the Department of Customs and Inland Revenue. In 1921 the name was changed to the Department of Customs and Excise. In April 1924 collection of income taxes was placed under the Minister of Customs and Excise and, under the Department of National Revenue Act, 1927, the Department became known as the Department of National Revenue.

The Customs and Excise Division of the Department is responsible for the assessment and collection of customs and excise duties as well as of sales and excise taxes. The Taxation Division is responsible for the assessment and collection of income taxes, gift tax, old age security tax, Part I of the Canada Pension Plan, and estate taxes for Canada and all provinces, except Quebec, through its 29 district taxation offices and its Taxation Data Centre.

The Minister of National Revenue is responsible to Parliament for the Tax Appeal Board.

**Office of the Chief Electoral Officer.**—This Office was established in 1920 under the provisions of the Dominion Elections Act, now the Canada Elections Act (RSC 1960, c. 39, and amendments thereto), and is responsible for the conduct of all federal elections as well as the elections of members of the Northwest Territories Council and of the Yukon Territory Council. In addition, it conducts any vote taken under the Canada Temperance Act. The Chief Electoral Officer is responsible directly to Parliament, the Secretary of State acting as spokesman for him in the Cabinet and the House of Commons.

**Office of the Comptroller of the Treasury.**—The Comptroller of the Treasury is an officer of the Department of Finance appointed by the Governor in Council. Under the authority of the Financial Administration Act, he has the statutory responsibility of ensuring that no payment out of the Consolidated Revenue Fund is made for a purpose not authorized by or in excess of an amount appropriated by Parliament and that all relevant executive regulations are observed. For this

purpose, he conducts a pre-audit of all payments except those under the Travel Regulations. He also provides a cheque-issue and accounting service for all departments and is responsible for the preparation of the *Public Accounts* and other financial statements of the government.

**Office of the Representation Commissioner.**—This Office was established in 1963 under the provisions of the Representation Commissioner Act (SC 1963, c. 40) and is responsible for preparing maps showing the distribution of population in each province and setting out alternative proposals respecting the boundaries of electoral districts in each province. In addition, it is required to make a review and study methods of registration of electors and absentee voting used in elections of other countries. The Secretary of State acts as spokesman for the Office in the Cabinet and the House of Commons.

**Post Office Department.**—Administration and operation of the Canada Post Office, by virtue of the Post Office Act (RSC 1952, c. 212) and under the Postmaster General, includes all phases of postal activity, personnel, mail handling, transportation of mails by land, water, rail and air and the direction and control of financial services including the operation of money order and savings bank business.

**Privy Council Office.**—For administrative purposes, the Privy Council Office is regarded as a Department of Government under the Prime Minister. The Clerk of the Privy Council, under whose direction its functions are carried out, is considered as a Deputy Head and takes precedence among the chief officers of the Public Service. The authority of the Privy Council Office is to be found in Sects. 11 and 130 of the British North America Act, 1867, which constituted a Council to aid and advise in the government of Canada to be styled the Queen's Privy Council for Canada. In 1940, upon the wartime development of Cabinet committees and the consequent need for orderly secretarial procedures such as agenda, explanatory memoranda and minutes, the Principal Secretary in the Prime Minister's Office was designated Clerk of the Privy Council and First Secretary to the Cabinet. Since 1946, the Privy Council Office has been further reorganized, developed and enlarged and certain administrative functions of the Privy Council Office and the Prime Minister's Office have been closely integrated in the interests of efficiency and economy.

The organization of the Privy Council Office at present consists primarily of the Privy Council Section concerned with the examination of submissions to the Governor in Council, preparation of draft orders and regulations, circulation and filing of approved orders, and the duties of editing, registering and publishing the federal statutory regulations in Part II of the *Canada Gazette*; the Cabinet Section dealing with secretarial work for the Cabinet and for Cabinet committees and interdepartmental committees, such as the preparation and circulation of agenda and necessary documents to Ministers and recording and circulating decisions, liaison with departments and agencies of government, and the preparation of material for the Prime Minister; the Science Secretariat established in 1964 to assemble and analyse information about the Government's scientific programs and their inter-relation with other scientific activities throughout Canada; the Special Planning Secretariat established in 1965 to assess the extent and nature of the problems of poverty and inadequate opportunities in Canada, to analyse existing federal measures and to develop proposals for future federal programs aimed at overcoming inadequate economic and social opportunities; and the Special Secretariat on Bilingualism established in 1966.

The Office of the Prime Minister is organized as a Secretariat associated with the Privy Council Office and includes members of the Prime Minister's personal staff responsible for general secretarial duties, the drafting of letters, the arrangement of appointments to interview the Prime Minister or for his public appearances or for the release of his statements on matters of public interest, and assisting the Prime Minister in his parliamentary duties.

**Public Archives.**—The Public Archives was founded in 1872 and is administered under the Public Archives Act (RSC 1952, c. 222) by the Dominion Archivist who has the rank of a Deputy Minister and reports to Parliament through the Secretary of State. Its purpose is to assemble and make available to the public a comprehensive collection of historical source material relating to the history of Canada. Major emphasis is placed on official records of the Government and the personal papers of political leaders and other prominent figures. These are supplemented by copies of many records in the British and French archives that relate to Canada, a fine map collection, a historical library, and many prints, paintings and photographs. The Archives operates a large Records Centre which provides accommodation for departmental records that are seldom used and also serves as a sorting centre, preserving papers of long-term interest from obsolete files and marking useless material for destruction. The Government's Central Microfilm Unit is housed in the Records Centre.

Under the terms of the Laurier House Act (RSC 1952, c. 163) the Public Archives is responsible for the administration of Laurier House as a museum and study centre.

**Public Service Commission.**—At the time of writing (November 1966) a Bill is before Parliament which will, if passed,\* replace the Civil Service Act of 1961; it is under this Act that the Civil Service Commission, the central personnel agency of the Federal Government, operates.

\* See Chap. XXVII. Part IV.

The Commission is the custodian of the merit system of employment and promotion in the Civil Service and is concerned with most other aspects of personnel administration. However, the proposed Public Service Employment Act will change many functions of the (Public Service) Commission (see the 1966 Year Book, pp. 143-145). It reaffirms the merit principle and makes possible the extension of its application to certain groups of employees now exempt from the provisions of the Civil Service Act; although permitting the delegation of authority to deputy heads and their officers for making appointments to and within the Public Service, the Commission will maintain centralized staffing operations for groups whose occupations are common to all departments and for certain specialized classes; the Commission will still be responsible for all appointments and report annually to Parliament, through the Secretary of State, on the discharge of this responsibility. The Commission will be relieved of the responsibility of recommending rates of pay and certain conditions of employment and also of all matters that would be directly or indirectly the subject of bargaining.

**Department of Public Works.**—The Department was constituted in 1867 and operates under the legislative authority of the Public Works Act and other Acts of Parliament. It is responsible for the management and direction of the public works of Canada and, except as specifically provided in other Acts, attends to the construction and maintenance of public buildings, wharves, piers, roads and bridges and the undertaking of dredging and navigable waters protection work. Federal Government interest in the Trans-Canada Highway and the Northwest Highway System is also handled by the Department. The Department maintains district offices at key points across the country. The Branches and Divisions of the Department are: Harbours and Rivers Engineering, Building Construction, Development Engineering, Property and Building Management, Administrative Services, Economic Studies, Financial Services, Fire Prevention, Information Services, Legal Services and Personnel.

The Minister of Public Works is also responsible to Parliament for the National Capital Commission. -

**Department of the Registrar General.**—This Department was established by the Government Organization Act, 1966 (SC 1966, c. 25) which was proclaimed effective Oct. 1, 1966. It is presided over by the Registrar General of Canada whose duties include all matters over which the Parliament of Canada has jurisdiction relating to combines, mergers, monopolies and restraint of trade; patents, copyrights and trade marks; bankruptcy and insolvency; and corporate affairs. His functions also include the registration of all instruments issued under the Great Seal of Canada.

**Royal Canadian Mounted Police.**—The Royal Canadian Mounted Police, a civil force maintained by the Federal Government, was organized in 1873 as the North-West Mounted Police. It now operates under the Royal Canadian Mounted Police Act, 1959 and is responsible for enforcing federal laws throughout Canada. By agreement with certain provincial governments, it is also responsible for enforcing provincial laws within those provinces and for policing many district municipalities, cities and towns. A Commissioner, appointed by the Governor in Council, has the control and management of the Force and of all matters connected therewith; he functions under the direction of the Solicitor General of Canada.

**Department of the Secretary of State.**—The duties, powers and functions of the Secretary of State of Canada extend to and include all matters over which the Parliament of Canada has jurisdiction, not by law assigned to any other department, branch or agency of the Government of Canada, relating to: citizenship; elections; State ceremonial, the conduct of State correspondence and the custody of State records and documents; the encouragement of the literary, visual and performing arts, learning and cultural activities; and libraries, archives, historical resources, museums, galleries, theatres, films and broadcasting.

The responsibilities of the Department of the Secretary of State include those pertaining to the administration of the following branches: Citizenship; Citizenship Registration; financial support for higher education; National Museum of Canada; Secretariat and Parliamentary Returns; and Translation Bureau.

The Secretary of State of Canada reports to Parliament for the Centennial Commission, the National Arts Centre Corporation, the National Film Board, the National Library, the Public Archives, the National Gallery and the Office of the Queen's Printer (Publisher), and is spokesman in the Cabinet and the House of Commons for the Board of Broadcast Governors, the Canada Council, the Canadian Broadcasting Corporation, the Public Service Commission, the Office of the Chief Electoral Officer and the Office of the Representation Commissioner.

**Department of the Solicitor General.**—Before 1936, the Office of the Solicitor General was either a Cabinet post or a Ministerial post outside the Cabinet. From 1936 to 1945 the position did not exist, the duties of the Office being wholly absorbed by the Attorney General of Canada. The Solicitor General Act, 1945 (RSC 1952, c. 253) re-established the Solicitor General as a Cabinet officer and provided that "... The Solicitor General shall assist the Minister of Justice in the Counsel work of the Department of Justice, and shall be charged with such other duties as are at any time assigned to him by the Governor-in-Council". This legislation was repealed by the Government Organization Act, 1966 (SC 1966, c. 25), which created a new Department of the Solicitor General

and assigned to the Solicitor General of Canada responsibility for the Royal Canadian Mounted Police, the Canadian Penitentiary Service and the National Parole Board. With this new legislation, the Solicitor General of Canada becomes the Cabinet Minister with primary responsibility in the fields of crime and correction.

**Tariff Board.**—Constituted in 1931, the Board derives its duties and powers from three statutes: the Tariff Board Act (RSC 1952, c. 261, as amended); the Customs Act (RSC 1952, c. 58, as amended); and the Excise Tax Act (RSC 1952, c. 100, as amended).

Under the Tariff Board Act, the Board makes inquiry into and reports upon any matter in relation to goods that, if brought into Canada, are subject to or exempt from duties of customs or excise taxes. Reports of the Board are tabled in Parliament by the Minister of Finance. It is also the duty of the Board to hold an inquiry under Sect. 14 of the Customs Tariff and to inquire into any other matter in relation to the trade and commerce of Canada that the Governor in Council sees fit to refer to the Board for inquiry and report.

Under the provisions of the Customs Act and the Excise Tax Act, the Tariff Board acts as a court to hear appeals from rulings of the Department of National Revenue, Customs and Excise Division, in respect of excise taxes, tariff classification, value for duty, and drawback of customs duties. Declarations of the Board on appeals on questions of fact are final and conclusive but the Acts contain provisions for appeal on questions of law to the Exchequer Court of Canada.

**Tax Appeal Board.**—The Tax Appeal Board (created in 1946 as the Income Tax Appeal Board) now operates under the Income Tax Act (RSC 1952, c. 148 as amended). The Board is declared by statute to be a court of record and has jurisdiction to hear and determine appeals by taxpayers against their assessment under the Income Tax Act and also appeals under the Estate Tax Act. An appeal lies from the Board to the Exchequer Court of Canada and a further appeal from that court to the Supreme Court of Canada. The Board consists of a chairman, an assistant chairman and four other members. Its offices are located at Ottawa and it hears appeals at the principal centres throughout Canada approximately twice a year and at the main centres, such as Montreal and Toronto, six times a year. The Board is under the jurisdiction of the Minister of National Revenue but is independent of the Department of National Revenue.

**Department of Trade and Commerce.**—The Department of Trade and Commerce has consistently expanded its services to the business community since becoming functional in 1892, almost five years after establishment was approved by an Act of Parliament. Today the Department has 202 Trade Commissioners on its staff serving at headquarters in Ottawa and at 66 posts in 46 countries abroad; this figure includes Assistant Trade Commissioners in training as well as agricultural, fisheries, publicity and timber specialists. Trade Commissioners carry such titles as Minister (Commercial), Commercial Counsellor or Commercial Secretary and hold diplomatic status if they are members of a mission maintained by the Department of External Affairs.

The Department comprises three principal services: Trade Policy governs trade relations; External Trade Promotion is responsible for the Canadian Government Travel Bureau, the Canadian Government Exhibition Commission, the Trade Commissioner Service, and the Trade Publicity and Trade Fairs and Missions Branches; the Commodities and Industries Services incorporates the Agriculture and Fisheries Branch, Industrial Materials Branch, Manufacturing Industries and Engineering Branch, and the Transportation and Trade Services Branch.

Crown corporations and agencies that report to Parliament through the Minister of Trade and Commerce include the Dominion Bureau of Statistics, the Export Credits Insurance Corporation, the Canadian Corporation for the 1967 World Exhibition, the Canadian Government Participation, 1967 Exhibition and the Canadian Wheat Board.

**Department of Transport.**—The Department was created on Nov. 2, 1936 from the former Departments of Marine and of Railways and Canals, and the Civil Aviation Branch of the Department of National Defence (RSC 1952, c. 79).

The work of the Department consists of two main Services—Marine and Air. Marine Service operations include aids to navigation, nautical and pilotage services, marine agencies, secondary canals, steamship inspection, the Canadian Coast Guard, and direct supervision over 300 public harbours; 11 other harbours come under supervision of the Department but are administered by commissions. Air Services cover the operation of the Telecommunications and Electronics, Civil Aviation, and Meteorological Branches. The work of the Telecommunications and Electronics Branch includes the administration of national and international radio laws, regulations and agreements; it is also responsible for the construction, installation, maintenance and operation of aeronautical, marine and meteorological radio-communication stations and of radio and electronics aids to marine and air navigation.

The Minister of Transport is responsible to Parliament for the following boards, commissions and Crown companies: Air Canada, the Air Transport Board, the Board of Transport Commissioners, the Canadian Maritime Commission, the National Harbours Board, the St. Lawrence Seaway Authority, the Canadian Overseas Telecommunication Corporation, the Canadian National Railways and the Atlantic Development Board.

**Treasury Board.**—The Treasury Board was first established as a committee of the Queen's Privy Council for Canada by PC 3 of July 2, 1867; it was subsequently made statutory in 1869. With the Minister of Finance as Chairman, and the administrative staff (including the Secretary of the Board) provided by the Department of Finance, the Board has, from its inception, exercised oversight, on behalf of the Governor in Council, over the financial affairs of the various departments and agencies of the Government.

By the Government Organization Act, 1966 (SC 1966, c. 25), these historic, organic links between the Minister and the Department of Finance and the Treasury Board were altered in a number of important respects. The Board was established as a separate department of government under its own Minister, the President of the Treasury Board. The membership of the Board was enlarged from six to seven, with the Minister of Finance serving ex officio as a member, together with five additional Privy Councillors designated by the Governor in Council. The President of the Board, in addition to assuming the duties formerly vested in the Minister of Finance as Chairman of the Board, became the Minister responsible for the new Department and, in this capacity, was given, for the first time, power to act on behalf of the Board in intervals between Board meetings. This marked an important step in the evolution of the Board from a committee of Ministers to a department of government, with certain managerial and administrative responsibilities in its own right.

The powers and duties of the Board continue to be governed by the Financial Administration Act (RSC 1952, c. 116) which was also amended in a number of important respects in 1966. The effect of these amendments was to establish the Treasury Board, even more clearly than before, as the agency of government chiefly responsible for formulating central management policy, issuing directives and guidelines, and monitoring departmental performance in a wide variety of fields. These include most financial management functions, e.g., short- and long-range expenditure forecasting, program analysis, estimates preparation, supervision and control of expenditures, leases, contracts, financial commitments, etc. Responsibility for providing leadership and stimulus to improved management performance and to the application of modern, efficient administrative methods within departments and agencies was also vested, for the first time, explicitly in the Board.

Possibly the most important change in the duties and responsibilities of the Board was in the field of personnel management. This resulted in part from the recommendations of the Royal Commission on Government Organization and in part from the designation of the Board as the principal agent of the employer in collective bargaining—a role assigned to it by the provisions of the Public Service Staff Relations Act of 1966. The Board had assigned to it, in addition to its previous duties relating to organization and establishment control, exclusive responsibility for classification, rates of pay and conditions of employment, a responsibility previously shared with the Civil Service Commission (now Public Service Commission) and for determining generally the policy governing personnel management in the public service. The legislation assigning these new responsibilities to the Board contemplates and provides for extensive delegation of the Board's authority to the operating departments, under terms and conditions established by the Board.

The Treasury Board, in the new role assigned to it in the fields of financial management, personnel management and administrative improvement, conforms closely in most respects to the concept of the Treasury Board as the central management agency for the Government of Canada, outlined in 1962 in the first Report of the Royal Commission on Government Organization (Glassco Commission).

**Department of Veterans Affairs.**—This Department, established in 1944 (RSC 1952, c. 80), is concerned exclusively with the welfare of veterans and with the dependants of veterans and of those who died on active service. The Department provides treatment services (hospital, medical, dental and prosthetic), welfare services, education assistance, life insurance, and land settlement and home construction assistance. The Veterans' Bureau assists veterans in the preparation and presentation of pension claims.

The Canadian Pension Commission established by the Pension Act (RSC 1952, c. 207), and the War Veterans Allowance Board established by the War Veterans Allowance Act (RSC 1952, c. 340) also report to Parliament through the Minister of Veterans Affairs.

The Department has treatment institutions and facilities in a number of urban centres. It also maintains, in large cities across Canada, administrative offices, which are shared with the Canadian Pension Commission and the War Veterans Allowance Board, and an office in London, England.

**War Veterans Allowance Board.**—This Board, established under the authority of the War Veterans Allowance Act, 1930 (RSC 1952, c. 340 as amended), is a statutory body responsible to the Minister of Veterans Affairs for the administration of the Act and for the administration of Part XI of the Civilian War Pensions and Allowances Act relating to certain groups of civilians who performed meritorious service in either World War I or II. It consists of three to ten members (three to five permanent, up to three temporary, and up to two additional without pay) appointed by the Governor in Council. Its functions include the responsibility of ensuring that all 19 District Authorities located in various regions throughout Canada interpret the legislation in a fair, reasonable and equitable manner. It is also an appeal body and may consider an appeal of an appellant against the decision of a District Authority.

### Section 3.—Crown Corporations

The Crown corporation form of public enterprise is not a new type of organization in Canada but in recent years, as the work of government has become more complex, greater reliance has been placed on it as the appropriate instrument for administering and managing many public services in which business enterprise and public accountability must be combined.

The use of the corporate device to harmonize public responsibility in the development of economic resources and the provision of public services with the pursuit of commercial and industrial objectives has led to the adoption of many different forms and formulas of management. The most usual practice has been to set up a corporation under the provisions of a special Act of Parliament which defines its purposes and sets forth its powers and responsibilities. However, during World War II the Minister of Munitions and Supply was authorized to procure the incorporation of companies under the federal Companies Act, 1934, or under any provincial Companies Act to which he might delegate any of the powers conferred on him under the Department of Munitions and Supply Act or any Order in Council. Under this legislation about 28 companies were created to serve a wide variety of purposes; most of these companies have since been wound up.

Following the successful experience during the war years in relying on the Companies Act for the establishment of Crown companies, similar incorporating powers were granted by an amendment to the Research Council Act and have been incorporated in the Atomic Energy Control and the Defence Production Acts.

In 1946 the Government Companies Operation Act was passed to regulate the operation of companies formed under the Companies Act. However, it was applicable only to a relatively small number of companies and, in order to establish a more uniform system of financial and budgetary control and of accounting, auditing and reporting for Crown corporations generally, Part VIII of the Financial Administration Act was enacted in 1951 and brought into operation by proclamation on Oct. 1, 1952. Upon its enactment the financial provisions of the Government Companies Operation Act were repealed.

One of the more interesting features of the later legislation is the attempt that has been made to define and classify Crown corporations.\* The Act defines a Crown corporation as a corporation that is ultimately accountable, through a Minister, to Parliament for the conduct of its affairs and establishes three classes of corporation—departmental, agency and proprietary.

*Departmental Corporations.*—A departmental corporation is defined as a Crown corporation that is a servant or agent of Her Majesty in right of Canada and is responsible for administrative, supervisory or regulatory services of a governmental nature. Twelve departmental corporations are listed in Schedule B to the Act:—

Agricultural Stabilization Board (formerly Agricultural Prices Support Board)  
Atomic Energy Control Board  
Canadian Maritime Commission  
Director of Soldier Settlement  
The Director, The Veterans' Land Act  
Dominion Coal Board  
Economic Council of Canada  
Fisheries Prices Support Board  
Municipal Development and Loan Board  
National Gallery of Canada  
National Research Council  
Unemployment Insurance Commission.

\* Not all Crown corporations are subject to the provisions of the Financial Administration Act. For example, the Canadian Wheat Board, the Bank of Canada and its subsidiary the Industrial Development Bank, because of the special nature of their functions, are excluded from operations of the Crown corporations Part of the Act and are governed by their own Acts of incorporation as is also the Eastern Rockies Forest Conservation Board, a joint federal-provincial enterprise, and the Canadian Corporation for the 1967 World Exhibition. The Canada Council was set up under the Canada Council Act (assented to Mar. 28, 1957) as a Crown corporation but has been declared not an agency of the Crown and hence is not included in the Schedules to the Financial Administration Act; the same situation applies to the Atlantic Development Board set up under the Atlantic Development Board Act (assented to Dec. 20, 1962), the Science Council of Canada (assented to May 12, 1966), the Company of Young Canadians (assented to July 11, 1966) and the National Arts Centre Corporation (assented to July 15, 1966).

*Agency Corporations.*—An agency corporation is defined as a Crown corporation that is an agent of Her Majesty in right of Canada and is responsible for the management of trading or service operations on a quasi-commercial basis or for the management of procurement, construction or disposal activities on behalf of Her Majesty in right of Canada. The following agency corporations are listed in Schedule C to the Financial Administration Act or have been subsequently added to that Schedule by the Governor in Council:—

Atomic Energy of Canada Limited  
 Canadian Arsenals Limited  
 Canadian Commercial Corporation  
 Canadian National (West Indies) Steamships Limited  
 Canadian Patents and Development Limited  
 Centennial Commission  
 Crown Assets Disposal Corporation  
 Defence Construction (1951) Limited  
 National Battlefields Commission  
 National Capital Commission (formerly Federal District Commission)  
 National Harbours Board  
 Northern Canada Power Commission (formerly Northwest Territories Power Commission)  
 Park Steamship Company Limited.

Two corporations, Canadian Sugar Stabilization Corporation Limited and Commodity Prices Stabilization Corporation Limited, listed in Schedule C when the Financial Administration Act was proclaimed, have since discontinued operations and surrendered their charters. By an Order in Council of June 15, 1955, the name of the Northwest Territories Power Commission (now Northern Canada Power Commission) was deleted from Schedule D and added to Schedule C, effective Apr. 1, 1954. Also, the Canadian National (West Indies) Steamships Limited and Park Steamship Company Limited are both virtually inoperative.

*Proprietary Corporations.*—A proprietary corporation is defined as a Crown corporation that (1) is responsible for the management of lending or financial operations, or for the management of commercial or industrial operations involving the production of or dealing in goods and the supplying of services to the public, and (2) is ordinarily required to conduct its operations without parliamentary appropriations. The following proprietary corporations are listed in Schedule D to the Act or have been subsequently added to that Schedule by the Governor in Council:—

Air Canada (formerly Trans-Canada Air Lines)  
 Canadian Broadcasting Corporation  
 Canadian Overseas Telecommunication Corporation  
 Central Mortgage and Housing Corporation  
 Eldorado Aviation Limited  
 Eldorado Mining and Refining Limited  
 Export Credits Insurance Corporation  
 Farm Credit Corporation (formerly Canadian Farm Loan Board)  
 National Railways, as defined in the Canadian National-Canadian Pacific Act, 1933  
 Northern Transportation Company Limited  
 Polymer Corporation Limited  
 St. Lawrence Seaway Authority  
 Seaway International Bridge Corporation Limited (formerly Cornwall International Bridge Company Limited), subsidiary to the St. Lawrence Seaway Authority.

Departmental corporations are governed by the provisions of the Financial Administration Act that are applicable to departments generally. Agency and proprietary corporations, however, are subject to the provisions of the Crown corporations Part of the Act although, if there is any inconsistency between the provisions of that Part and those of any other Act applicable to a corporation, the Act provides that the latter prevail. There is provision in the Part for the control and regulation of such matters as corporation budgets and bank accounts, the turning over to the Receiver General of surplus money, limited loans for working-capital purposes, the awarding of contracts and the establish-

ment of reserves, the keeping and auditing of accounts, and the preparation of financial statements and reports and their submission to Parliament through the appropriate Minister.

A further form of control is exercised by Parliament through the power to vote financial assistance. This may take different forms. For some corporations, capital may be provided by parliamentary grants, loans or advances that may subsequently be converted into capital stock or bonds; for others it may be by the issue of capital stock to be subscribed and paid for by the Government; or by the sale of bonds to either the Government or the public. A few corporations have financed all or a portion of their requirements from their own resources or earnings.

Prior to 1952, Crown corporations did not pay corporate income taxes. However, the Income Tax Act was later amended so that, in respect of financial years commencing after Jan. 1, 1952, proprietary Crown corporations pay taxes on income earned in the same manner as any privately owned corporation. One desirable result of this amendment is that the financial statements of these Crown companies are now more comparable with those of private industry, with which in some instances they are in competition, and thus it is easier to assess the relative efficiency of their operations.

The functions of the various Crown corporations are given briefly in the following paragraphs. For a number of them, further details are included in the Chapters dealing with the subjects concerned (see Index).

**Agricultural Stabilization Board.**—The Board was established in 1958 (SC 1957-58, c. 22) to administer the provisions of the Agricultural Stabilization Act. The Board reports to Parliament through the Minister of Agriculture and routine administrative matters are handled through departmental channels.

**Air Canada.**—Formerly Trans-Canada Air Lines, the Corporation was incorporated by Act of Parliament in 1937 to provide a publicly owned air transportation service, with powers to carry on its business throughout Canada and outside of Canada. Air Canada now maintains passenger, mail and commodity traffic services over nation-wide routes and also services to the United States, England, Scotland, Ireland, France, Switzerland, West Germany, Austria, Bermuda, the Bahamas, Jamaica, Antigua, Barbados and Trinidad. Air Canada is responsible to Parliament through the Minister of Transport.

**Atlantic Development Board.**—The Act establishing this Board (SC 1962-63, c. 10) received Royal Assent on Dec. 20, 1962. The Board is composed of a chairman and four other members appointed by Order in Council and reports to Parliament through the Minister of Transport. Its functions are to inquire into and report upon measures and projects for fostering the economic growth and development of the Atlantic region of Canada and to assess and make recommendations with respect to particular projects referred to it by the Minister.

**Atomic Energy Control Board.**—By Act of Parliament (RSC 1952, c. 11) proclaimed October 1946, the regulation and control of atomic energy in Canada was placed under the Atomic Energy Control Board. The Board reports to Parliament through the Minister of Energy, Mines and Resources.

**Atomic Energy of Canada Limited.**—This Crown company was incorporated in February 1952 under the Atomic Energy Control Act, 1946 (RSC 1952, c. 11) to take over from the National Research Council on Apr. 1, 1952 the operation of the Chalk River project. The main activities of the company are (a) the development of economic nuclear power, (b) scientific research and development in the atomic energy field, (c) the operation of nuclear reactors and (d) the production of radioactive isotopes and associated equipment such as Cobalt-60 beam therapy units for the treatment of cancer. The company reports to Parliament through the Minister of Energy, Mines and Resources.

**Bank of Canada.**—Legislation of 1934 (RSC 1952, c. 13) provided for the establishment of a central bank in Canada, the function of which is to regulate credit and currency, to control and protect the external value of the Canadian dollar and to stabilize the level of production, trade, prices and employment so far as may be possible within the scope of monetary action. The Bank acts as the fiscal agent of the Government of Canada, manages the public debt and has the sole right to issue notes for circulation in Canada. The Bank is managed by a Board of Directors appointed by the Government and composed of a Governor, a Deputy Governor and 12 Directors; the Deputy Minister of Finance is also a member of the Board. The Bank reports to Parliament through the Minister of Finance and is governed by its own Act of incorporation. (See footnote, p. 142.)

**The Canada Council.**—Established by Order in Council dated Apr. 15, 1957, this corporation, composed of a chairman, a vice chairman and 19 other members, a director and an associate director, operates under the terms of the Canada Council Act, assented to Mar. 28, 1957. The function of the Council is to encourage the arts, humanities and social sciences in Canada. Its work is financed mainly by two funds, originally of \$50,000,000 each, set up by Parliament when the Council was created: the University Capital Grants Fund, now nearly depleted, and the Endowment Fund, of which only the income may be used. In addition, the Canadian Parliament, on Apr. 3, 1965, approved a special appropriation of \$10,000,000 to enable the Council to meet its minimum foreseeable requirements during the next few years in the furtherance of the general purposes set out in Sect. 8 of the Act. In the making, managing and disposing of investments under the Act, the Council has the advice of an Investment Committee of five, including the chairman and another member of the Council. The proceedings of the Council are reported each year to Parliament through the Secretary of State. (See footnote, p. 142.)

**Canadian Arsenals Limited.**—This company was established under the Companies Act by Letters Patent dated Sept. 20, 1945 and is subject to the Government Companies Operation Act (RSC 1952, c. 133) and certain provisions of the Financial Administration Act (RSC 1952, c. 116). The company was set up to take over and operate Crown-owned plants and equipment. It manufactures small arms and a wide variety of ammunition and components and has extensive facilities for the filling and assembly of artillery, ammunition, mines, bombs, grenades, rockets and other specialties up to torpedo warheads. Its Divisions, together with the locations of their plants, are as follows: Dominion Arsenal Division (Quebec City and Val Rose, Que.); Small Arms Division (Long Branch, Ont.); Filling Division (St. Paul l'Ermite, Que.). The company reports to Parliament through the Minister of Defence Production.

**Canadian Broadcasting Corporation.**—The CBC functions under the Broadcasting Act, 1958, which continues the Corporation as a Crown agency charged with the operation of a national broadcasting service. It has the authority to maintain and operate broadcasting stations and networks and to originate and secure programs from within and outside Canada. This national radio and television service is financed through annual grants from Parliament and revenues from commercial operations.

The Corporation consists of 11 directors appointed by the Governor in Council and chosen to give representation to the principal geographical divisions of the country. The Secretary of State acts as spokesman for the Corporation in the Cabinet and the House of Commons. The President and Vice President are full-time executives appointed for a period of seven years; the other nine Directors are appointed for periods of three years and may serve two consecutive terms. The President is the chief executive of the Corporation and, with the Vice President, is responsible for the conduct of the affairs of the Corporation. As the chief executive, the President receives, interprets and applies the policies and directives of the Directors of the Corporation and establishes administrative and operating policies to control the activities of all operating units—English Networks, French Networks, Regional Broadcasting and the International Service—and of corporate staff departments—Programming, Planning, Engineering and Finance.

In practice, attention of the President is directed primarily to the broad fields of corporate policy, long-range planning and financing. He reports on activities to the Directors of the Corporation and the conduct of relations with Parliament, the Board of Broadcast Governors and the public. The Vice President assists the President in his role of chief executive by assuming primary responsibility for the current operations of the Corporation.

The Corporation's Head Office is situated in Ottawa. Headquarters for English Networks is located in Toronto and for French Networks in Montreal and Regional Headquarters are situated in St. John's for Newfoundland, Halifax for the Maritime Provinces, Winnipeg for the Prairie Provinces, and Vancouver for British Columbia. Headquarters for the Northern and Armed Forces Services is in Ottawa and that for the International Service is in Montreal.

**Canadian Commercial Corporation.**—This Corporation was established on May 1, 1946 by the Canadian Commercial Corporation Act (RSC 1952, c. 35). Its principal purpose is to assist in the development of trade between Canada and other nations by acting on behalf of the Canadian Government as the contracting agency when other countries wish to purchase defence or other supplies and services from Canada on a government-to-government basis. The Corporation may enter into transactions under the provisions of the Act for any department or agency of the Government of Canada.

The Corporation is operated by the Department of Defence Production with staff provided by the Department and reports to Parliament through the Minister of Defence Production.

**Canadian Corporation for the 1967 World Exhibition.**—This Corporation was established by Act of Parliament (SC 1962-63, c. 12) to plan, organize, hold and administer the Canadian Universal and International Exhibition, Montreal 1967, to be held on the occasion of the Centenary of Canadian Confederation. The Exhibition is one of the First Category, and Canada is the first country in the Americas to hold such an exhibition under a franchise of the International Bureau of Exhibitions.

The Exhibition, known as EXPO 67, will be held in Montreal Apr. 28 to Oct. 27, 1967, on a site prepared by the City in three main areas grouped around historic St. Helen's Island in the

middle of the St. Lawrence River. The theme, "Man and His World", is purported to demonstrate how, through the ages, man has met the challenge of his environment.

The Corporation is headed by a commissioner general and president; a deputy commissioner general and vice president; and a general manager. It reports to Parliament through the Minister of Trade and Commerce. The present address of the Corporation is Place Ville-Marie, Montreal; the telephone number is EXPosition 1967; and the cable address is Montexpo.

**Canadian Government Participation, 1967 Exhibition.**—This temporary government organization was set up officially on Oct. 24, 1963, following some months of study and preparatory work. It is not a Crown company but is nevertheless independent of Federal Government departments. The Commissioner General has the status of a Deputy Head and reports directly to the Minister of Trade and Commerce. He is entrusted with the planning, construction and operation of buildings and exhibits that will depict Canada, Canadians and Canadian achievements for better comprehension by visitors from all parts of the world to the International Exhibition, EXPO 67, to be held in Montreal Apr. 28 to Oct. 27, 1967.

**Canadian Maritime Commission.**—This Commission was created in 1947 by the Canadian Maritime Commission Act (RSC 1952, c. 38). It considers and recommends policies and measures necessary for the operation, maintenance, manning and development of a merchant marine and a shipbuilding and ship-repairing industry. The Commission administers the Canadian Vessel Construction Assistance Act (RSC 1952, c. 43) and the steamship subsidies voted by Parliament. Other functions include consultation with the Department of National Revenue in the administration of the laws relating to the coasting trade of Canada and the co-ordination of the overseas movement of men and material for the Department of National Defence. It has responsibility in international matters relating to merchant shipping, such as NATO, IMCO and other international bodies. The Chairman has the status of a Deputy Minister and the Commission reports to Parliament through the Minister of Transport.

**Canadian National Railways.**—The Canadian National Railway Company was incorporated (SC 1919, c. 13) to operate and manage a national system of railways, including the Canadian Northern Railway System, the Canadian Government Railways and all lines entrusted to it by Order in Council. In 1923 the Grand Trunk Railway Company of Canada was amalgamated with the Canadian National Railway Company and since 1923 a number of railway lines acquired by the Government have been entrusted to the Company for operation and management, including the Newfoundland Railway and steamship services in 1949, the Temiscouata Railway in 1950, and the Hudson Bay Railway and the Northwest Communication System in 1953. The Canadian National Railways Act, 1919 was repealed in 1955 and the Canadian National Railways Act (SC 1955, c. 29) substituted therefor.

The Canadian National Railway Company is controlled by a chairman and board of directors appointed by the Governor in Council, who report to Parliament through the Minister of Transport.

**Canadian Overseas Telecommunication Corporation.**—This Crown company was created on Dec. 10, 1949 by Act of Parliament (RSC 1952, c. 42) to acquire for public operation external telecommunication assets in Canada, in keeping with the Commonwealth Telegraph Agreement signed May 11, 1948. This Agreement was designed to bring about the consolidation and strengthening of the radio and cable communication systems of the Commonwealth. The Corporation is responsible to Parliament through the Minister of Transport.

**Canadian Patents and Development Limited.**—Canadian Patents and Development Limited is a Crown corporation set up in 1947, pursuant to authority granted in an amendment to the Research Council Act passed in 1946. The primary purpose of the company, which is a subsidiary of the National Research Council, is to make available to industry, through licensing arrangements, commercial inventions originating in the NRC laboratories. The company also handles inventions referred to it from the research establishments of Federal Government departments and agencies, Canadian universities, and provincial research councils. Any profits that the company may derive from licensing arrangements are used for further research and development. The company's Board of Directors is composed of representatives of the National Research Council of Canada, government departments and agencies, industry and the universities. The company reports to Parliament through the Minister of Industry in his capacity as Chairman of the Committee of the Privy Council on Scientific and Industrial Research.

**Canadian Wheat Board.**—The Board was incorporated in 1935 under the Canadian Wheat Board Act to market, in an orderly manner, in the interprovincial and export trade, grain grown in Canada. Its powers include authority to buy, take delivery of, store, transfer, sell, ship or otherwise dispose of grain. Except as directed by the Governor in Council, the Board was not originally authorized to buy grain other than wheat but, since Aug. 1, 1949, it may also buy oats and barley if authorized to do so by Regulation approved by the Governor in Council. Only grain produced in the designated area, which includes Manitoba, Saskatchewan, Alberta and parts of British Columbia and Ontario, is purchased by the Board, which controls the delivery of grain into elevators and railway cars in that area as well as the interprovincial movement and export of wheat, oats and barley generally. The Board is governed by its own Act of incorporation (see footnote, p. 142). It reports to Parliament through the Minister of Trade and Commerce.

**Centennial Commission.**—The Centennial Commission is a Crown corporation established by Parliament (SC 1960-61, c. 60 as amended) and responsible for the co-ordination and administration of projects relating to the Centennial of Confederation in Canada. It consists of a commissioner, an associate commissioner and not more than 12 directors, each of whom is appointed by the Governor in Council. The Commission is responsible to Parliament through the Secretary of State.

**Central Mortgage and Housing Corporation.**—This Corporation was incorporated by Act of Parliament (RSC 1952, c. 46) in December 1945 to administer the National Housing Acts. Under the National Housing Act, 1954 (SC 1953-54, c. 23, as amended), the Corporation insures mortgage loans made by approved lenders and makes direct loans for new home-ownership, rental housing and existing housing in urban renewal areas; guarantees home improvement loans made by banks; undertakes subsidized rental housing projects and land assembly developments under federal-provincial arrangements; offers loans and subsidies for public housing projects; makes loans for land assembly projects to be used for public housing; makes loans to limited-dividend and non-profit housing companies for low-rental housing projects; makes loans for university housing projects and to provinces and municipalities for sewage treatment projects designed to eliminate water and soil pollution; makes contributions and loans to provinces and municipalities for urban renewal operations; conducts housing research; encourages urban planning and owns and manages rental housing units including those built for war workers and veterans. The Corporation arranges for and supervises construction of housing projects on behalf of the Department of National Defence and other government departments and agencies. The Corporation is responsible to Parliament through the Minister of Labour.

**Company of Young Canadians.**—The Act establishing this corporation (SC 1966, c. 36) was assented to on July 11, 1966. The corporation consists of a Council of the Company and persons who are volunteer-members. The Council has 15 members, 10 of whom are elected by the volunteer-members and five of whom are appointed by the Governor in Council. Term of office for both elected and appointed members is three years. The Act provides for the establishment of an Interim Council of not more than 20 members to hold office until the members of the Council are elected or appointed. The objects of the Company are to support, encourage and develop programs for social, economic and community development in Canada or abroad through voluntary service. The corporation reports to Parliament through the Prime Minister.

**Crown Assets Disposal Corporation.**—This Corporation is established under the Surplus Crown Assets Act (RSC 1952, c. 260) and is subject to the Financial Administration Act (RSC 1952, c. 116). In June 1944, War Assets Corporation was established by statute to replace War Assets Corporation Limited which had been incorporated in 1943. In 1949 the name of War Assets Corporation was changed to Crown Assets Disposal Corporation. The Corporation's function is to dispose of surplus Crown assets. It is responsible to Parliament through the Minister of Defence Production.

**Defence Construction (1951) Limited.**—Defence Construction Limited began its operations in November 1950 as a Crown agency responsible for awarding and supervising defence construction projects. On July 12, 1951, under authority of the Defence Production Act, the present company was established under the name of Defence Construction (1951) Limited and took over the responsibilities of the former agency. From inception until Apr. 1, 1951 the company reported to the Minister of Trade and Commerce, from which date it reported to the Minister of Defence Production until the Minister of Industry was given the powers of the Minister of Defence Production on July 22, 1963. On Apr. 22, 1965, the control and supervision of the company was transferred to the Minister of National Defence.

The company's prime responsibility is the construction of defence projects, including the calling and review of all tenders and subsequent contract awards, the supervision of actual construction work in the field, and the administration of all projects from the Ottawa Head Office. More specifically, however, the company's operations cover five distinct spheres: defence projects in Canada for the Department of National Defence; all defence projects in Europe for the Department of National Defence under the North Atlantic Treaty Organization agreement; maintenance and repair contracts at Department of National Defence sites throughout Canada; defence construction for the U.S. Government in Canada; and advice and assistance in construction aspects of certain projects such as the Canadian Corporation for the 1967 World Exhibition.

**Director of Soldier Settlement and Director of the Veterans' Land Act.**—The Director of Soldier Settlement (under the Act of 1919) is also the Director of the Veterans' Land Act, and in each capacity is legally a corporation sole. For administrative purposes, however, the programs carried on under both Acts constitute integral parts of the services provided by the Department of Veterans Affairs.

**Dominion Coal Board.**—The Board, established as a department in 1947 by the Dominion Coal Board Act (RSC 1952, c. 86), has the responsibility of studying and recommending to the Government policies concerning the production, import, distribution and use of coal. The Chairman has the status of a Deputy Minister and the Board reports to Parliament through the Minister

of Energy, Mines and Resources. The Board administers transportation and other subventions relating to coal and also administers loans authorized under the Coal Production Assistance Act (RSC 1952, c. 173, as amended).

**Eastern Rockies Forest Conservation Board.**—The Board was appointed in 1947 under the Eastern Rocky Mountain Forest Conservation Act which authorized an agreement between the Government of Canada and the Province of Alberta relating to the protection and conservation of the forests of that portion of the eastern slope of the Rocky Mountains which gives rise to the major tributaries of the Saskatchewan River. Its function is to determine the policy necessary to obtain the greatest possible flow of water in the Saskatchewan River system. The planning of programs of forest use and conservation is a joint duty of the Board and the provincial Forest Service; the administration of the conservation area is a function of the province. In April 1962, a Technical Co-ordinating Committee for Watershed Research was established to undertake study of the related needs defined by the Board. The Committee's programs, undertaken by seven co-operating agencies of the Federal and Alberta Governments, are co-ordinated by an officer of the federal Department of Forestry and Rural Development.

Funds for capital expenditures during the first seven years of the agreement were provided by the Federal Government with maintenance expenditures being paid by the Province of Alberta. In 1955 the province undertook the responsibility of financing both capital improvements and maintenance work. Currently, one member of the three-man Board is appointed by the Federal Government and the province has the right to appoint two members. The choice of one of the three members as Board chairman is vested in the province. The Board reports to Parliament through the Minister of Forestry and Rural Development. (See footnote, p. 142.)

**Economic Council of Canada.**—This corporation, established under legislation passed on Aug. 2, 1963 (SC 1963, c. 11), consists of a full-time chairman and two full-time directors appointed for a term not to exceed seven years and not more than 25 additional members to serve part-time and without remuneration. The Council is to be as representative as possible of labour, agriculture and primary industries, secondary industry and commerce, and the general public. Its functions are to advise and recommend measures that will achieve in Canada the highest possible levels of employment and efficient production so that the country may enjoy a high and consistent rate of economic growth and that all Canadians may share in rising living standards; to carry on the duties of the former National Productivity Council which were to promote and expedite continuing improvement in productive efficiency in the various aspects of Canadian economic activity; and to publish an annual review of medium- and long-term economic prospects and problems. The Council reports to Parliament through the Prime Minister.

**Eldorado Aviation Limited.**—This company was incorporated Apr. 23, 1953 to carry air traffic, both passenger and freight, for Eldorado Mining and Refining Limited and its wholly owned subsidiary, Northern Transportation Company Limited. It reports to Parliament through the Minister of Energy, Mines and Resources.

**Eldorado Mining and Refining Limited.**—Set up in 1944 under the name of Eldorado Mining and Refining (1944) Limited (the date was omitted from the name in June 1952), the company's business is the mining and refining of uranium and the production of nuclear fuels in Canada. The company has also entered into contracts for the purchase of uranium concentrates from private producers in Canada. It reports to Parliament through the Minister of Energy, Mines and Resources.

**Export Credits Insurance Corporation.**—This Corporation commenced operations in 1945 under the Export Credits Insurance Act, 1944 (RSC 1952, c. 105, as amended) and is administered by a Board of Directors (including the Deputy Minister of Trade and Commerce and the Deputy Minister of Finance) with the advice of an Advisory Council. Its function is to insure Canadian exporters against non-payment by foreign buyers arising out of credit and political risks involved in foreign trade. The Corporation is also authorized to provide financing in respect of an export transaction involving extended credit terms. It reports to Parliament through the Minister of Trade and Commerce.

**Farm Credit Corporation.**—This Corporation was established on Oct. 5, 1959 (SC 1959, c. 43) for the purpose of providing for the extension of long-term mortgage credit to farmers. The Corporation also administers the Farm Machinery Syndicate Credit Act and is responsible to Parliament through the Minister of Agriculture.

**Fisheries Prices Support Board.**—The Board was set up in July 1947 (RSC 1952, c. 120) to recommend to the Government price support measures when severe price declines occur. The Board functions under the direction of the Minister of Fisheries and consists of a chairman, who is a senior officer of the Department of Fisheries, and five members chosen from private and co-operative firms in the industry. The Board has authority to buy fishery products and to sell or otherwise dispose of them or to pay producers the difference between a price prescribed by the Board and the average price the product actually commands.

**Industrial Development Bank.**—The Bank, a subsidiary of the Bank of Canada, was incorporated in 1944 to provide loans to industrial enterprises where financing is not available through recognized lending organizations. (See footnote, p. 142.)

**Medical Research Council.**—Established in November 1960, this Council operates as a virtually autonomous unit within the administrative framework of the National Research Council. It is composed of a chairman, a secretary and 15 members who serve for a three-year term, renewable once. The primary aim of the Council is the development of medical research and the support of medical research workers in the university centres of Canada. It reports to Parliament through the Minister of Industry in his capacity as Chairman of the Committee of the Privy Council on Scientific and Industrial Research.

**Municipal Development and Loan Board.**—The Act establishing this Board (SC 1963, c. 13) received Royal Assent on Aug. 2, 1963. The Board comprises a chairman and four other members, all senior officials of government, appointed by the Governor in Council, and reports to Parliament through the Minister of Finance. The Board was set up to make loans, up to a total amount of \$400,000,000, to municipalities to assist in the construction of additional municipal capital projects, thereby providing increased employment during the period 1963-66. By Mar. 31, 1966, the last date on which a loan could be approved, almost the entire fund had been committed, although actual loan payments continued to be made subsequent to that date as projects were completed.

**National Arts Centre Corporation.**—The Act establishing this Corporation (SC 1966, c. 48) was assented to July 15, 1966. The Corporation consists of a Board of Trustees composed of a chairman, a vice-chairman, the Mayors of Ottawa and Hull, the Director of the Canada Council, the President of the Canadian Broadcasting Corporation, the Government Film Commissioner and nine other members appointed by the Governor in Council for terms not exceeding three years, except for the first appointees whose terms range from two to four years. The objects of the Corporation are to operate and maintain the National Arts Centre, to develop the performing arts in the National Capital Region and to assist the Canada Council in the development of the performing arts elsewhere in Canada. The Corporation reports to Parliament through the Secretary of State.

**National Battlefields Commission.**—This Commission was established by Act of Parliament in 1908 to preserve the Historic Battlefields at Quebec City. The Commission is composed of nine members, seven appointed by the Federal Government and one each by the Provinces of Ontario and Quebec. The Commission is supported by annual appropriations of the Federal Government and is responsible to Parliament through the Minister of Indian Affairs and Northern Development.

**National Capital Commission.**—This Commission is a Crown agency created by the National Capital Act (SC 1958, c. 37), proclaimed Feb. 6, 1959. It is the lineal descendant of the Federal District Commission. The Commission is served by a full-time paid chairman and comprises a total of 20 members representative of the ten provinces of Canada. Its work force fluctuates between 600 and 850, depending on the season.

Co-ordination and development of public lands in the National Capital Region are undertaken by direct planning and construction by the Commission's staff; by co-operation with municipalities; by provision of planning aid or financial assistance in municipal projects; and by advising the Department of Public Works on the siting and appearance of all Federal Government buildings in the 1,800-sq. mile National Capital Region. The Commission reports to Parliament through the Minister of Public Works.

**National Gallery of Canada.**—The beginnings of the National Gallery of Canada are associated with the founding of the Royal Canadian Academy of Arts in 1880. The Marquis of Lorne, then Governor General, had recommended and assisted the founding of the Academy. One of the three tasks he assigned to that institution was the establishment of a National Gallery at the seat of government. By Act of Parliament in 1913, re-enacted in 1951, the National Gallery was placed under the management of a Board of Trustees appointed by the Governor General in Council and now operates under the National Gallery Act (RSC 1952, c. 186). It is responsible to Parliament through the Secretary of State.

The first charge of the National Gallery is the development, care and display of the national art collections. Its services to the public include a large reference library on the history of art and related subjects; an Exhibition Extension Branch through which travelling exhibitions, lectures and the showing of art films, and guided tours of the Gallery at Ottawa are conducted; the production of art publications and reproductions; and a National Conservation Research Laboratory.

**National Harbours Board.**—The Board was established by Act of Parliament in 1936. It is responsible for the administration of port facilities at the harbours of St. John's, Nfld.; Halifax, N.S.; Saint John, N.B.; Chicoutimi, Quebec, Trois-Rivières and Montreal, Que.; Vancouver, B.C.; and Churchill, Man.; the Jacques Cartier and Champlain Bridges at Montreal, Que.; and the grain elevators at Prescott and Port Colborne, Ont. The Board reports to Parliament through the Minister of Transport.

**National Research Council of Canada.**—This is an agency of the Canadian Government established in 1916 to promote scientific and industrial research. The Council operates science and engineering laboratories in Ottawa, Halifax and Saskatoon; gives direct financial support to research carried out in Canadian university and industrial laboratories; sponsors Associate Committees co-ordinating research on specific problems of national interest; and develops and main-

tains the nation's primary physical standards. Other activities include the provision of free technical information to manufacturing concerns; the publication of research journals; and representation of Canada in International Scientific Unions. Patentable inventions developed in the Council's laboratories are made available for manufacture through a subsidiary company, Canadian Patents and Development Limited (see p. 146). The National Research Council consists of a president, three vice presidents, and 17 members representing Canadian universities, industry and labour. The Council is incorporated under the Research Council Act (RSC 1952, c. 239, as amended), and reports to Parliament through the Minister of Industry in his capacity as Chairman of the Committee of the Privy Council on Scientific and Industrial Research.

**Northern Canada Power Commission.**—The Commission was established by Act of Parliament in 1948 (RSC 1952, c. 196) to provide power to points in the Northwest Territories where a need developed and where power could be supplied on a self-sustaining basis; the Act was amended in 1950 to give the Commission authority to provide similar services in the Yukon Territory. The name of the Commission (formerly the Northwest Territories Power Commission) was changed in 1956. It is composed of a chairman and two members appointed by the Governor in Council and reports to Parliament through the Minister of Indian Affairs and Northern Development.

The Commission operates three hydro-electric plants in the Northwest Territories (two on the Snare River near Yellowknife and one on the Taltson River near Fort Smith) and two hydro plants in the Yukon Territory (one on the Yukon River at Whitehorse and the other on the Mayo River near Mayo). Diesel-electric plants are operated at Fort Smith, Fort Simpson, Fort Resolution and Frobisher Bay, N.W.T., and at Field, B.C.; diesel-electric power and central heating plants at Inuvik and Frobisher Bay, N.W.T., and Moose Factory, Ont.; and water supply and sewerage systems at Inuvik and Moose Factory. The Commission also operates in the Northwest Territories, on behalf of the Department, diesel-electric plants at Fort McPherson and Aklavik, heating plants at Fort McPherson, Fort Simpson and Frobisher Bay, and domestic water supply and sewerage systems at Fort McPherson, Fort Simpson and Frobisher Bay.

**Northern Transportation Company Limited.**—This Company was incorporated in 1947 under the title of Northern Transportation Company (1947) Limited, the date being omitted from the name in 1952. Previously a Company chartered under an Alberta statute, it has been a wholly owned subsidiary of Eldorado Mining and Refining Limited since that Crown company was established and carries out the business of a common carrier in the Mackenzie River watershed and western Arctic. The Company is responsible to Parliament through the Minister of Indian Affairs and Northern Development.

**Polymer Corporation Limited.**—This Corporation was incorporated in 1942 by Letters Patent and is subject to the Government Companies Operation Act (RSC 1952, c.133) and the Financial Administration Act (RSC 1952, c. 116). Its head office and plant are located at Sarnia, Ont., where it produces synthetic rubbers, latices, resins and related products. Subsidiary operations for the production of butyl and specialty rubbers are located in Belgium and France, respectively, and an international marketing subsidiary is located in Switzerland. The Company reports to Parliament through the Minister of Defence Production.

**Science Council of Canada.**—The Act establishing the Science Council of Canada (SC 1966, c. 19) received assent on May 12, 1966. The Council is to consist of not more than 25 members each having a specialized interest in science or technology and four associate members chosen from among officers or employees of the Federal Government. Members hold office for not more than three years and associate members hold office during pleasure. All are appointed by the Governor in Council. The duties of the Science Council are to assess in a comprehensive manner Canada's scientific and technological resources, requirements and potentialities and to make recommendations thereon. The Council reports to Parliament through the Prime Minister.

**St. Lawrence Seaway Authority.**—The St. Lawrence Seaway Authority was established by Act of Parliament in 1951 (RSC 1952, c. 242) and came into force by proclamation on July 1, 1954. The Authority was incorporated for the purposes of constructing, maintaining and operating all such works as may be necessary to provide and maintain, either wholly in Canada or in conjunction with works undertaken by an appropriate authority in the United States, a deep waterway between the Port of Montreal and Lake Erie. The Crown corporation, Seaway International Bridge Corporation Limited, is subsidiary to the St. Lawrence Seaway Authority. The Authority is composed of a president, a vice president and a member, and reports to Parliament through the Minister of Transport.

**Unemployment Insurance Commission.**—The Commission was appointed on Sept. 24, 1940 under the provisions of the Unemployment Insurance Act, 1940 (RSC 1952, c. 273). It is composed of three commissioners appointed by the Governor in Council, of whom one is designated chief commissioner. One commissioner, other than the chief commissioner, is appointed after consultation with organizations representative of workers and the other after consultation with organizations representative of employers. The Chief Commissioner is appointed to hold office for a period of ten years and each of the other Commissioners to hold office for a period not exceeding ten years. The Commission is responsible to Parliament through the Minister of Labour.

## Section 4.—Acts Administered by Federal Departments\*

## List of the Principal Acts of Parliament Administered by Departments of the Government of Canada

NOTE.—Copies of individual Acts of Parliament may be obtained from the Queen's Printer, Ottawa, at prices of from 10 cents to \$1.50 per copy, according to number of pages. Where duplications of certain Acts appear in the list, parts of these Acts are administered by the Departments given.

## PART IV.—FEDERAL AND PROVINCIAL GOVERNMENT EMPLOYMENT

### Federal Government Employment

Most public service employment and related personnel functions have been the responsibility of the Civil Service Commission, an independent body responsible to Parliament; the Treasury Board has had the duty of approving rates of pay and conditions of employment. The Civil Service Commission was established in 1908 and the legislation under which it first operated was superseded by a new Act in 1918 and that in turn was replaced in 1962. The operations of the Commission under the 1962 legislation with respect to recruitment, promotion, position classification, salary determination, staff training and employee relations are described in the 1966 Year Book at pp. 143-144. However, at the time of writing (November 1966) there were before Parliament three Bills that would change this framework. The proposed legislation would:

reaffirm the (Public Service) Commission's guardianship of the merit system and provide for its extension to certain groups of employees previously exempt from the provisions of the Civil Service Act; permit further geographic decentralization of Commission operations and further delegation of its staffing authority for manpower needs of departments of government that are decentralizing their operations; establish the Treasury Board (see p. 141) as the central managerial authority for personnel policy (except for those aspects assigned to the Commission by law), for classification and pay, and for conditions of employment; and introduce a system of collective bargaining (administered by a special staff relations board) for pay and conditions of employment based on a new simplified classification system.

If passed before the end of the year, this legislation will be described briefly in Part IV of Chapter XXVII.

**Statistics of Federal Government Employment.\***—The current monthly survey of Federal Government employment, started in 1952, covers all employees of the Government of Canada; employees in this sense exclude the Governor General and Lieutenant-Governors, Ministers of the Crown and Members of Parliament, judges, persons under contract and members of the Armed Forces, but include Force members of the Royal Canadian Mounted Police. The survey is divided into two main categories: (1) departmental branches, services and corporations, and (2) agency and proprietary corporations and other agencies. Table 1 combines the two groups; Tables 2 to 5 cover employees in the first category and Table 6 covers employees in the second category.

\* Prepared in the Governments Division, Financial Statistics Branch, Dominion Bureau of Statistics.

**1.—Total Federal Government Employees, by Province, as at Mar. 31, 1965, and Payrolls for the Year Ended Mar. 31, 1965**

<sup>1</sup> In addition, approximately 220 agency and proprietary corporation and other agency employees are included with those of other provinces.

*Departmental Branches, Services and Corporations.*—The salaries of employees in this group are paid from the Consolidated Revenue Fund. Definitions of classifications are as follows. "Salaried" employees include all persons paid on the basis of an annual salary rate with the exception of ships' officers who, though paid an annual salary rate, are subject to special treatment under the regulations made pertaining to the Financial Administration Act. The salaried staff are employed in departmental branches, services and corporations which are subject to regulation by the Treasury Board and for which the positions are outlined in the *Estimates of Canada*, or are established by means of supplementary Treasury Board Minutes. Thus, this category of employees includes persons subject to the provisions of the Civil Service Act plus salaried persons employed on the staffs of Cabinet Ministers and appointed by statute or by Order in Council, and also the salaried staffs of certain administrative branches of the Government that do not fall under the jurisdiction of the Civil Service Act.

"Prevailing Rate" employees are those who occupy continuing positions that are subject to prevailing rate regulations and are therefore paid on the basis of standard wage rates for similar work in the area in which the individual is employed. Regulations made under authority of the Financial Administration Act govern the third group entitled "Ships' Officers and Crews".

These three groups comprise what may be called the "regular" employees of the government service. "Casuals and Others" are principally persons employed on a non-continuing basis.

Table 5 presents statistics for departmental branches, services and corporations on the basis of a classification by function. The purpose of such classification is to supply a means of studying the operation of government without the complication that results from differences in administrative establishment. This analysis is useful in three ways. First, it permits a detailed study of employment by the Government of Canada according to the main purposes or functions and, since these functions are not subject to the periodic changes that alter the administrative structure of the Government, it is possible to develop a statistical series which, with minor exceptions, is consistent over an extended period of time. Secondly, since differences in administrative establishment are eliminated, it is possible to make meaningful comparisons between Federal Government expenditures on employment and similar expenditures by other levels of government. Thirdly an analysis of the relationship between expenditures on employment and total expenditures may be made with regard to each function.

This Section normally includes a table giving employee and payroll data classified by departmental branches, services and corporations as they were organized at the end of the latest fiscal year. Data as at the end of March 1964 are given in the 1966 Year Book at pp. 152-155. However, because of the extensive changes taking place in the organization of a number of departments during 1965-66, this classification is not included in the current edition; monthly figures on both the functional and departmental bases are available in DBS publication *Federal Government Employment* (Cat. No. 72-004).

## 5.—Federal Government Employees as at Mar. 31, 1965 and Regular Payrolls for the Year Ended Mar. 31, 1965, classified by Function

Note.—Excludes agency and proprietary corporations and other agencies, figures for which are given in summary form in Table 6.

<sup>1</sup> Excludes 10,743 postmasters and an estimated 3,300 assistants paid \$29,726,225 from postal revenues.

<sup>2</sup> Excludes \$2,248 Christmas helpers paid \$3,390,170.

<sup>3</sup> Excludes part-time weather observers paid \$56,817.

<sup>4</sup> Excludes the Governor General and 10 Lieutenant-Governors paid \$230,664; 364 judges paid \$7,122,564; and 24 Ministers of the Crown paid \$390,084.

<sup>5</sup> Excludes field parties (55 prevailing rate staff paid \$578,044 and 80 ships' employees paid \$512,800) of the (Department of Mines and Technical Surveys. Field parties on the East Coast are included above. To avoid revealing particulars relating to individuals, payments of \$4,229 to prevailing rate employees and \$15,446 to casual employees are excluded from the function detail but are included here.

*Agency and Proprietary Corporations and Other Agencies.*—The following are organizations owned by the Federal Government as at Mar. 31, 1965. Employees and earnings are shown by month in Table 6; a provincial distribution of employees and a summary of the total payroll in each of the three groups is given in Table 1, p. 156.

Agency Corporations

Atomic Energy of Canada Limited  
Canadian Arsenal Limited  
Canadian Commercial Corporation  
Canadian Patents and Development Limited\*  
Centennial Commission  
Crown Assets Disposal Corporation

Defence Construction (1951) Limited  
National Battlefields Commission  
National Capital Commission  
National Harbours Board  
Northern Canada Power Commission

Proprietary Corporations

Air Canada  
Canadian Broadcasting Corporation  
Canadian National Railways  
Canadian Overseas Telecommunication Corporation  
Central Mortgage and Housing Corporation  
Eldorado Aviation Limited  
Eldorado Mining and Refining Limited

Export Credits Insurance Corporation  
Farm Credit Corporation  
Northern Transportation Company Limited  
Polymer Corporation Limited  
St. Lawrence Seaway Authority  
The Seaway International Bridge Corporation Limited

Other Agencies

Atlantic Development Board  
Bank of Canada  
Canadian Wheat Board

Industrial Development Bank  
Canadian Corporation for the 1967 World Exhibition  
Office of the Custodian

**Provincial Government Employment**

Table 7 shows gross payrolls (including retroactive pay, salary, adjustments and overtime payments) of provincial government employees, exclusive of those for British Columbia, for the month of March 1966. Provincial government payrolls for the whole of the year ended Mar. 31, 1966 amounted to \$1,210,255,000, payrolls for departmental services employees amounted to \$723,432,000 and accounted for 59.8 p.c. of the total, those of institutions of higher education received \$134,571,000 or 11.1 p.c., those of provincial government enterprises \$336,297,000 or 27.8 p.c., and those of workmen's compensation boards \$15,955,000 or 1.3 p.c. of the total.

The only data available for British Columbia and included in the table are for employees of institutions of higher education.

\* Staffed by employees of the National Research Council.

<sup>1</sup> Departmental services of the Northwest Territories are staffed by employees of the Government of Canada who are included in the statistics under "Federal Government Employment".

**PART V.—CANADA'S EXTERNAL RELATIONS\***

**Canada's Status in the Commonwealth.**—The Imperial Conference held in London in 1926 marked a turning point in the history of the then British Empire and was an important step in the evolution from Empire to Commonwealth. At the 1926 Conference the self-governing countries, consisting of Britain and the Dominions, were described as being "autonomous countries within the British Empire, equal in status, in no way subordinate one to another in any aspect of their domestic or external affairs, though united by a common allegiance to the Crown, and freely associated as members of the British Commonwealth of Nations". The Governors General of the Dominions were recognized as having in all essential respects the same constitutional position as the Crown in Britain. It was also stated by the Conference that "it is the right of the Government

\* Prepared (June 1966) by the Department of External Affairs.

of each Dominion to advise the Crown in all matters relating to its own affairs". Subsequent to this important meeting, Canada's stature and status in the international community continued to grow. Following from the earlier (1923) Imperial Conference, Canada exercised the powers of treaty-making and had established its own diplomatic missions overseas. The Statute of Westminster in 1931 provided more explicit recognition of the principles of equality of status by removing the remaining limitations on the legislative autonomy of Commonwealth countries. As a further development of Canada's independent position, all legal cases started in Canada after Dec. 23, 1949 could no longer be appealed to the Privy Council in London and the Supreme Court of Canada became the final court of appeal for all Canadian legal cases.

**Canada's International Status.**—The growth of Canada's international status is reflected in the development of the Department of External Affairs. A review of the organization and development of that Department is given in the 1952-53 Year Book, pp. 101-104; a brief outline is given at pp. 132-133 of this volume.

The following Section 1 covers Canadian diplomatic representation abroad and representation of other countries in Canada. Section 2 deals with Canada's main international activities during 1965 and early 1966 with respect specifically to the Commonwealth, the United Nations, and the North Atlantic Treaty Organization. International economic aid programs and Canada's participation in the Organization for Economic Co-operation and Development are covered separately. Although these fields are considered to be the most significant for the purposes of this publication, it should be noted that Canada's activities in other areas are also of importance. The *External Affairs Monthly Bulletin*\* covers all activities of the Department.

\* Obtainable from the Queen's Printer, Ottawa, \$2 per year.

## Section 1.—Diplomatic Representation as at June 30, 1966

NOTE.—Changes in this listing subsequent to June 30, 1966 and names of current representatives are given in *Canadian Representatives Abroad and Representatives of Other Countries in Canada*, published thrice yearly and obtainable from the Queen's Printer, Ottawa, price 60 cents per copy.

### 1.—Canadian Representation Abroad

Country and Year Representation Established	Present Status of Representative	Address
Algeria.....1965	*Ambassador.....	c/o Canadian Embassy, Proliterskih Brigada 69, Belgrade, Yugoslavia

## Section 2.—International Activities, 1965-66

### Subsection 1.—Canada and Commonwealth Relations

The Commonwealth today has been transformed basically from the compact and like-minded family of nations of predominantly European stock which constituted the Commonwealth association from the enactment of the Statute of Westminster to 1947. With its present membership of 23 sovereign states covering about one quarter of the earth's land surface, representing more than 750,000,000 people of many colours, creeds and languages, and including both economically developed and under-developed countries as well as governments committed and uncommitted in the international power groupings, the Commonwealth more accurately reflects the world over which it spreads so widely. The interests of its members extend to all continents and the variety of problems demanding their attention has greatly increased in scarcely more than a decade.

Commonwealth members are enumerated according to the year (if post-1931, noted in brackets) when membership was proclaimed: Britain; Canada; Australia; New Zealand; India (1947); Pakistan (1947); Ceylon (1948); Ghana (1957); Malaya (1957); Nigeria (1960); Cyprus (1961); Sierra Leone (1961); Tanganyika (1961); Jamaica (1962); Trinidad and Tobago (1962); Uganda (1962); Kenya (1963); Malawi (1964); Malta (1964); Zambia (1964); Gambia (1965); Singapore (1965); Guyana (1966). Early in 1964, Tanganyika joined Zanzibar to form the United Republic of Tanzania. When Singapore, Sarawak and Sabah joined the Federation in September 1963, Malaya became Malaysia; Singapore separated from Malaysia in August 1965.

Membership in the Commonwealth is one of the fundamental aspects of Canadian foreign policy. Canada has supported the extension and development of a strong Commonwealth, capable of exerting significant influence for international peace and progress. Commonwealth ties give Canada a special relationship with this group of nations which, despite the diversity of their backgrounds, share important ideals and traditions in common. Commonwealth ties are characterized in the main by a spirit of co-operation developed through consultation and exchange of views. These are continuous not only in Commonwealth capitals but in other countries, and also at United Nations and other international gatherings.

In addition to these continuing exchanges at many levels, special meetings are convened for the purpose of discussing and co-ordinating the interests of Commonwealth members in various special fields, and to review international developments in the Commonwealth context. The most important conference of this kind in 1966 was the meeting of Heads of Government (Prime Ministers and Presidents) held in Lagos, Nigeria, Jan. 11-12, to discuss Rhodesia. This was the first such meeting to be held in Africa, the first to be held after the establishment of the Commonwealth Secretariat, and the first meeting called to deal with a single political issue.

Canada's external aid for developing countries continued to be directed, in the main, to Commonwealth countries through the Colombo Plan, the Commonwealth Caribbean Program, and the Special Commonwealth African Assistance Plan (SCAAP). Canada's total contribution under the Colombo Plan since its inception exceeds \$670,000,000. Canada aided Commonwealth countries in Africa through SCAAP to a total of \$38,000,000 for the period from 1960 to the end of March 1966. Approximately \$31,000,000 was made available for aid and technical assistance to Commonwealth Caribbean countries from 1958 to the end of March 1966. During 1965, Canada also provided, on an increased scale, assistance in military training designed to improve the defence capability of certain Commonwealth countries.

Canada is an active participant in the Commonwealth Scholarship and Fellowship Plan (see pp. 179-180) and during the 1965-66 academic year received 222 students under this Plan, 80 p.c. of them from the developing countries; 77 Canadian students continued their higher education in other Commonwealth countries. Canada is also playing a significant part in the training and provision of teachers for service in Commonwealth countries and

assisting in plans for co-operation in technical education. During the academic year 1965-66, there were 533 Canadian teachers and university professors serving under Canadian Government aid programs in the less-developed countries of Southeast Asia, Africa and the Caribbean area, a very substantial proportion of them in Commonwealth countries.

### Subsection 2.—Canada and the United Nations

The constitutional disagreement over the financing of peace-keeping operations which led to the premature adjournment of the 19th Session of the General Assembly was not resolved during the 20th Session in 1965 but at least a compromise was reached which permitted the Organization to resume functioning. The compromise took the form of a consensus reached in the Special Committee on Peace-keeping Operations that financial difficulties should be solved through voluntary contributions from member states, and that the Assembly should not apply the loss-of-vote penalty of Article 19 of the Charter for failure to pay assessments for peace-keeping in the Congo and in the Middle East. A Canadian proposal to extend the mandate of the Special Committee and to renew the appeal for voluntary contributions was accepted by the Assembly in December 1965.

The United Nations Emergency Force (UNEF) in the Middle East continued throughout 1965, as did the United Nations Force in Cyprus (UNFICYP), and Canada participated in both. To improve the financial position of UNEF, Canada introduced a resolution, subsequently adopted by the Assembly, which combined the principle of assessment with provision for meeting any shortfall in funds without resort to voluntary contributions. The 18-year-old United Nations Military Observer Group in India and Pakistan (UNMOGIP) was reinforced by the United Nations India-Pakistan Observer Mission (UNIPOM) in September 1965 to deal with the Indo-Pakistani conflict over Kashmir. Canada provided the Commander for UNIPOM as well as an air transport unit and observers.

In September, Canada was happy to support the admission to the United Nations of Gambia, the Maldive Islands and Singapore. In contrast, Canada regretted the withdrawal of Indonesia from the United Nations in January 1965 because it has consistently supported the principle of universality in the United Nations. However, Canada did not vote in favour of the representation of the People's Republic of China in the United Nations because it could not accept several of that Republic's conditions for membership, such as the expulsion of the Republic of China, a founding member of the United Nations. As regards the Rhodesian crisis, Canada supported two United Nations resolutions which condemned the unilateral declaration of independence by Southern Rhodesia, but was unable to support another resolution which requested Britain to employ all measures, including military force, to bring down the Smith regime.

In the economic field, Canada supported the merger of the Expanded Programme of Technical Assistance (EPTA) and the Special Fund into the United Nations Development Programme (UNDP), the establishment of a new United Nations Organization for Industrial Development (UNOID), and a resolution designed to extend and put on a permanent basis the World Food Programme, an experimental co-operative arrangement between the Food and Agriculture Organization (FAO) and the United Nations which was begun in 1961 as a result of a Canadian initiative.

In the social sector, the Specialized Agencies continued their efforts to promote education, to relieve hunger and to improve public health. The Canadian representative to the United Nations Children's Fund (UNICEF) was elected to the Chairmanship of the Programme Committee, and the commitment of the Canadian public to UNICEF is demonstrated by the fact that the government contribution (\$1,000,000) was more than equalled by proceeds from the UNICEF Hallowe'en and Christmas Card campaigns (\$1,100,000). Canada has continued to support international efforts for the relief and rehabilitation of refugees; in 1965 contributions to both the United Nations High Commissioner for Refugees (UNHCR) and to the United Nations Relief and Works Agency (UNRWA) were increased, and a Canadian served as Chairman of the Executive Committee of the UNHCR.

The United Nations marked 1965 as International Co-operation Year (ICY). UN member governments, together with interested non-governmental organizations, organized activities designed to emphasize the continuing, if unpublicized, nature of international co-operation in many fields. The Canadian Permanent Representative to the United Nations was Chairman of the United Nations Committee for ICY for most of 1965. Co-operative projects in education, arts, science and sports, the issue of ICY postage stamps and special features on radio and television for both domestic networks and international transmission were features of the Canadian ICY program.

**Canadian Financial Contributions to the United Nations.**—In 1965, Canada's contributions to the United Nations system were as follows:—

<i>Agency</i>	<i>Percentage Assessment</i>	<i>Contribution (Canadian \$)</i>
<b>United Nations—</b>		
Regular budget.....	3.17	3,016,439

<sup>1</sup> Estimated. Between inception of UNFICYP on Mar. 4, 1964 and Dec. 26, 1965, the net cost to Canada of its participation in the force was \$7,002,000. Canada pays all costs of maintaining its contingent in Cyprus but recovers from the UN the out-of-pocket expenses of Canadian personnel at UNFICYP headquarters. The figure cited does not include salaries and similar costs which Canada would have had to pay if the personnel had remained in Canada.

<sup>2</sup> In response to a request from the Secretary-General, Canada agreed on June 27, 1965 to make a voluntary contribution of \$4,000,000 to the UN to assist it in its current financial difficulties. <sup>3</sup> Canada has paid in full its subscription to these organizations so that no payments were required in 1965; as a result of a review of quotas it is expected that additional subscriptions will be made to the IBRD and IMF in 1966.

<sup>4</sup> Of the commitment of \$15,027,012, which represents the first instalment of Canada's supplementary contribution to IDA, \$13,274,518 was drawn during 1965 and \$2,500,000 in January 1966. <sup>5</sup> Canada withdrew from ICEM in 1962 but has continued to make an annual grant for the transportation of refugees.

**Specialized Agencies.**—Canada is a member of each of the 13 Specialized Agencies of the UN. Additionally, Canada holds membership in the International Atomic Energy Agency (IAEA), an autonomous international organization under the aegis of the UN. These Agencies are invested with wide international responsibilities established by inter-governmental agreement, and act in relationship with the UN to assist in carrying out the terms of the Charter. Co-ordination of activities of the Agencies is promoted by the Administrative Committee on Co-ordination established by the Economic and Social Council. This Committee is composed of the Secretary General of the UN, the executive heads of the Specialized Agencies, the Director General of the IAEA and other high officials of the UN. It considers common administrative questions, inter-agency program co-ordination and projects or problems of special urgency to be undertaken jointly by several Agencies. The Agencies also report annually to the Economic and Social Council of the UN.

*International Labour Organization.*—The International Labour Organization (ILO) was originally established with the League of Nations in 1919 and became a Specialized Agency of the UN in 1946. It brings together representatives of governments, employers and workers from 114 member states in an attempt to promote social budgets by improving living and working conditions in all parts of the world. The ILO is responsible for a number of technical programs financed by the United Nations Development Programme, as well as training programs under its regular budget. To further its work, the ILO holds numerous meetings during the year, including the International Labour Conference in Geneva each June. At the 49th session of the Conference in June 1965, the principal debate focused, as it has done in recent years, on a continuing examination of modernizing and streamlining the programs and structures of the Organization.

*Food and Agriculture Organization.*—The Food and Agriculture Organization (FAO) came into being in 1945, the first Conference being held in that year in Quebec City. The objectives of the Organization are to raise the levels of nutrition and living standards of its members and to improve the techniques of the production and distribution of food and agricultural, fishery and forestry products. To this end, the FAO Secretariat collects, analyses and distributes technical and economic information and encourages appropriate national and international action. A Council meets twice a year to give direction and policy guidance to the Secretariat; the FAO Conference, which is the governing body of the Organization, meets every other year. Headquarters are in Rome, Italy.

Canada has participated actively in FAO activities and is a member of the Council, the Committee on Commodity Problems (CCP), the Consultative Sub-Committee on Surplus Disposals, the FAO Group on Grains, the North American Forestry Commission and other FAO bodies. A number of Canadians are on the staff at Rome headquarters and many Canadians have undertaken assignments under FAO technical assistance programs. Canadian membership in the Organization is provided for by an Act of the Canadian Parliament passed in 1945. A committee of officials from Canadian Government departments (the Canadian Interdepartmental FAO Committee) has been established to maintain liaison between the FAO Secretariat and the Canadian Government.

The World Food Program first began operations on a three-year experimental basis at the beginning of 1963, under the joint auspices of the FAO and the UN. The Program provides food aid on a multilateral basis for emergency relief and promotes economic and social development, including feeding of children. At a UN-FAO Pledging Conference in New York in January 1966, \$208,000,000 was pledged toward a second three-year program (1966-68). Canada, with a pledge of \$27,500,000, is the second largest supporter of the Program.

*World Health Organization.*—The World Health Organization (WHO) came into being in 1948 and is one of the largest of the Specialized Agencies of the UN, having a membership of 121. Functioning through the World Health Assembly (an organization composed of an Executive Board, a Secretariat and six regional committees), WHO acts as a direct-

ing and co-ordinating authority on international health matters. In addition, it provides advisory and technical services to help countries develop and improve their health services. The 18th World Health Assembly was held in Geneva in May 1965. (See also the item "International Health" in Subsect. 7, Sect. 1, Part I of Chapter VI on Public Health, Welfare and Social Security.)

*United Nations Educational, Scientific and Cultural Organization.*—The United Nations Educational, Scientific and Cultural Organization (UNESCO) was established in 1946 "to contribute to peace and security by promoting collaboration among the nations through education, science and culture in order to further universal respect for justice, for the rule of law, for human rights and fundamental freedoms". Its headquarters is in Paris and total membership at the end of 1965 was 121 states.

The Organization is made up of three principal organs—the General Conference which is the policy-making body, the Executive Board and the Secretariat. Representatives from member states make up the General Conference which meets every two years to consider applications for membership, elect the Executive Board, plan the program and approve the budget for the ensuing two-year period. The latest General Conference was held in Paris in October and November 1964. It approved a budget of \$48,900,000, giving priority to the educational needs of the developing countries and to science activities, particularly the application of science to development; the Canadian assessment rate is 2.98 p.c. The next General Conference takes place in Paris in October 1966. Further information about the Organization may be obtained from the Canadian National Commission for UNESCO, Ottawa.

*International Civil Aviation Organization.*—The International Civil Aviation Organization (ICAO), with headquarters in Montreal, is the only Specialized Agency of the UN with headquarters in Canada. Canada has been a member of the 27-nation Council, the governing body of ICAO, since its inception in 1947. The 15th Session of the ICAO Assembly, consisting of all member states, was held in Montreal from June 22 to July 19, 1965. A Canadian was elected President of the Assembly. During February 1966 a special ICAO meeting was held in Montreal to discuss the question of liability in connection with air accidents.

*International Telecommunication Union.*—Canada is a member of the International Telecommunication Union (ITU), a Specialized Agency of the UN, which traces its origin to the International Telegraph Convention of 1865 and the International Radio Telegraph Convention of 1906. The Plenipotentiary Conference, the supreme authority of the ITU, met in Montreux, Switzerland from Sept. 14 to Nov. 12, 1965. The Conference revised the International Telecommunication Convention which will come into force on Jan. 1, 1967. Canada is represented on the 29-member Administrative Council, the executive organ of the Union.

*World Meteorological Organization.*—Canada is a member of the World Meteorological Organization (WMO), a Specialized Agency of the UN since 1951 but developed from the International Meteorological Organization founded in 1878. During 1965, Canada was represented at the regular meetings of a number of the subsidiary bodies of WMO.

*Inter-Governmental Maritime Consultative Organization.*—The Inter-Governmental Maritime Consultative Organization (IMCO) was established in 1959 to promote international co-operation on technical shipping problems and the adoption of the highest standards of safety and navigation. Canada participated in the Conference held in Jordan under the auspices of IMCO from Mar. 24 to Apr. 9, 1965 which drew up the Convention of the Facilitation of Maritime Travel and Transport. Canada was re-elected to the Administrative Council and the Maritime Safety Committee during their regular sessions held in Paris in September 1965.

*Universal Postal Union.*—With a membership of 126, the Universal Postal Union (UPU) is one of the largest of the Specialized Agencies of the UN; it is also one of the oldest,

as it was founded in Berne in 1874 with the principal aim of improving postal services throughout the world and promoting international collaboration. The Universal Postal Congress is the supreme authority of the UPU and normally meets every five years to review the Universal Postal Convention and its subsidiary instruments. In the interim, UPU activities are carried on by an executive council of which Canada is at present a member, a consultative committee on postal studies, and an international bureau. The 15th Congress was held in Vienna in May-July 1964.

*International Monetary Fund.*—The International Monetary Fund, established by the Bretton Woods Conference in 1944, came into being in 1945. It provides machinery for international consultation and collaboration on monetary, payment and exchange problems, including the promotion of exchange stability, the elimination of exchange restrictions, the establishment of a multilateral system of current payments and the expansion and balanced growth of international trade. Also, member countries under certain conditions may draw on the regular resources of the Fund, which now amount to some \$19,200,000,000 (of which the equivalent of about \$13,600,000,000 is in gold and convertible currencies) or on the supplementary resources of \$6,000,000,000 made available in 1962 under the General Arrangements to Borrow. The Fund has 103 members (as at Mar. 31, 1966). Canada has been represented on the Fund's Executive Board since its inception.

*International Bank for Reconstruction and Development.*—The IBRD or World Bank was founded at the same time as the International Monetary Fund at the Bretton Woods Conference in 1944 to assist the development of productive resources in member countries by extending loans where private capital is not available on reasonable terms and by providing technical assistance. The loans are made from the paid-up subscriptions of member states, from the surplus accumulated by the Bank and from loans raised in the markets of member states. By Dec. 31, 1965, the subscribed capital was \$21,606,000,000 (U.S.). The Bank's first loans were for European postwar reconstruction but in 1948 the Bank turned to lending for development and an increasing proportion of its funds has been directed to the less-developed areas of the world. As of Dec. 31, 1965, the Bank had made 446 loans totalling nearly \$9,500,000,000 (U.S.) since it started operations in 1946, and had used or been able to allocate for lending the equivalent of approximately \$1,779,000,000 from paid-in capital, including the full \$75,000,000 of the paid-in portion of Canada's subscription.

Unlike the year 1964 when there were no public offerings, 1965 was marked by an intensive marketing campaign that included public offerings of the Bank's bonds in world markets. These offerings, aggregating the equivalent of nearly \$300 000,000, included public issues of the Bank in the Canadian market for the first time in nearly 10 years; the Canadian issue was \$25,000,000, offered in February.

*International Finance Corporation.*—The function of the International Finance Corporation, which is an affiliate of the IBRD, is to promote the growth of productive private enterprise by assisting private capital, by acting as a clearing house in bringing together investment opportunities and private capital and by helping to enlist managerial skill and experience when not otherwise available to a project. Of a total capital subscription of \$99,000,000 (U.S.), Canada has provided \$3,600,000.

*International Development Association.*—The IDA, also an affiliate of the IBRD, was established in September 1960 to meet the situation of a growing number of less-developed countries whose need for and ability to make use of outside capital is greater than their ability to service conventional loans. Consequently, the terms of IDA development credits are designed to impose far less burden on the balance of payments of borrowing countries than conventional loans. Credits extended to date have each been for a term of 50 years, bearing no interest. At the end of 1965, paid-in and prospective resources of IDA amounted to \$1,676,300,000 (U.S.). Prospective contributions to be paid in over the three years 1965-68 (subject to legislative authorization) will amount to \$740,745,000 (U.S.), of which

Canada's share will be \$41,700,000 (U.S.). IDA began operations in November 1960 and extended its first development credit in May 1961. By Dec. 31, 1965, it had extended a total of 79 development credits totalling \$1,192,300,000 to 30 countries in Africa, Asia, the Middle East and the Western Hemisphere.

**International Atomic Energy Agency.**—Formed in 1957, the International Atomic Energy Agency (IAEA) is an autonomous international organization under the aegis of the UN. The Agency was given a mandate to seek to accelerate and enlarge the contribution of atomic energy to peace, health and prosperity throughout the world in a variety of ways. Because Canada has been designated as one of the five members most advanced in nuclear technology, including the production of source materials, a Canadian representative has served on the IAEA Board of Governors since the inception of the Agency.

As of June 1966, IAEA membership consisted of 96 states. The organization of conferences and symposia of experts, the dissemination of information and the provision of technical assistance are among the methods that the Agency adopts to carry out its functions. With the rapid expansion in the use of nuclear power much of the Agency's program is devoted to this field, as well as to the use to which isotopes may be put in agriculture and medicine. An important aspect of the IAEA activities that is becoming of increasing significance relates to the development and application of safeguard measures to ensure that nuclear materials supplied for peaceful purposes are not diverted to military uses.

**International Law Commission.**—By Article 13(1) of the Charter of the United Nations, one of the purposes of the UN General Assembly is to encourage the progressive development of international law and its codification. In order to implement and to assist in this function, the International Law Commission was created by a General Assembly resolution dated Nov. 21, 1947. It is composed of 25 members who are elected in their individual capacity. They serve for terms of five years and, in general, represent the main forms of civilization and principal legal systems of the world. On Nov. 28, 1961, Canada's Under-Secretary of State for External Affairs was elected to membership of this Commission. The 25 countries whose nationals form, at present, the International Law Commission are: Afghanistan, Algeria, Argentina, Austria, Brazil, Britain, Canada, China, Ecuador, Finland, France, India, Iraq, Israel, Italy, Japan, Nigeria, Poland, Senegal, Spain, the Union of Soviet Socialist Republics, the United Arab Republic, the United States of America, Uruguay and Yugoslavia.

### **Subsection 3.—Canada and the North Atlantic Treaty Organization\***

Two Ministerial meetings were held during 1965 and meetings of the Permanent Representatives to the North Atlantic Council were held continuously throughout the year at NATO headquarters in Paris.

The annual spring meeting was held in London on May 11-12, attended by the Foreign Ministers of the NATO Alliance. The Canadian delegation was led by the Secretary of State for External Affairs. In surveying the international scene, Ministers noted that, so far as Europe was concerned, the situation was basically unchanged. There had been no major crisis or confrontation and the trend toward increased contacts between East and West has continued. On the other hand, the fundamental causes of tension still persisted and little, if any, progress had been made toward removing them. Particular attention was given during the discussions to areas of tension or conflict, such as Malaysia, Viet-Nam, Cyprus, the Dominican Republic and some African States, where threats to international security and peace had arisen.

\* The terms of the Treaty and the organization of the Council and subordinate committees are dealt with in the 1954 Year Book at pp. 113-115. A short review of the events leading up to the establishment of NATO and its subsequent membership is given in the 1960 Year Book at p. 167.

The Ministers welcomed the continuing progress in political consultation within the Alliance, observed with satisfaction the more frequent attendance of Ministers and senior officials from capitals at regular meetings of the Council in permanent session, and noted that the Council had embarked on the study of the state of the Alliance which, at the preceding Ministerial meeting, it had been directed to undertake. The hope was expressed that, without prejudging the legal and political position of any member, an early solution would be found to the difficulties facing the UN and thus enable that organization to play its proper role in helping to preserve international peace and security.

The annual Ministerial meeting held in Paris Dec. 14-16 was attended by a Canadian delegation led by the Secretary of State for External Affairs and the Minister of National Defence. The Ministers noted that members of NATO had promoted and extended their contacts and exchanges with the U.S.S.R. and the countries of Eastern Europe, and affirmed that they would continue to seek an improvement in their relations with these countries. It was a matter for satisfaction that the efforts made in this regard had met with some degree of response, mainly in the sphere of bilateral relations. The Ministers noted, however, that the U.S.S.R. continued to oppose a settlement of the cardinal issues between East and West and they therefore emphasized their determination to maintain the unity of the Alliance and ensure its collective defence.

The Ministers noted the progress made in studies of the interrelated questions of strategy, force requirements and resources, which had been initiated at the Ottawa session in May 1963. Force goals for the period 1966-70 were being worked out as the first of a series of steps designed to secure closer alignment between NATO military requirements and national force plans within the agreed strategic concept of a forward defence posture. They accepted in principle the introduction of new procedures designed to improve the annual process of reviewing the defence efforts of member countries and agreeing upon their force contributions. These procedures, by projecting Alliance force goals and country plans five years ahead each year, are intended to enhance the capacity of the Alliance to adapt its defence plans to changes both in military technology and in the international situation. The Ministers instructed the Council in permanent session to review the organizational and financial basis of the Allied Command Europe Mobile Force.

The Secretary General reported on his activities under the 'watching brief' in regard to Greek-Turkish relations entrusted to his predecessor by the Council at The Hague in May 1964. The Ministers agreed that these activities should continue and also reiterated their support for the efforts of the UN to reduce tension in Cyprus. The Council endorsed the Secretary General's plea for an early resumption of constructive discussions between Greece and Turkey and stressed the importance of a speedy solution to the financial and other problems involved in the continuation of the UN peace-keeping operation.

**Canadian Contributions to NATO.**—Support for NATO during 1965 continued to be one of the foundations of Canadian foreign policy. As its contribution to the military strength of the Alliance, Canada maintains an army brigade and an air division in Europe and supporting forces in Canada, including one battalion assigned to the Allied Command Europe Mobile Force. It has assigned a substantial naval force to the Supreme Allied Commander Atlantic (SACLANT) for the defence of the Canada-United States region in case of emergency and participates with the United States in the defence of the North American Continent through the North American Air Defence Command (NORAD).

Since 1950, Canada has contributed approximately \$1,800,000,000 in mutual aid to European members of NATO. The aid program, consisting of contributions to NATO infrastructure and military costs, transfers of equipment to member countries and aircrew training in Canada of NATO forces, continued in 1965. This program has decreased in magnitude with the changing conditions and the increasing ability of the European members to meet their individual defence requirements.

#### Subsection 4.—Canadian External Aid Programs

**The Colombo Plan.**—The Colombo Plan for Co-operative Economic Development in South and Southeast Asia was conceived at the Commonwealth Meeting of Foreign Ministers held at Colombo, Ceylon, in January 1950. Although the Plan was initiated by Commonwealth governments, it is not exclusively a Commonwealth Program. It is designed to assist in the economic development and the raising of living standards of all countries and territories in the general area of South and Southeast Asia. Its membership now includes Afghanistan, Australia, Bhutan, Britain, Brunei, Burma, Cambodia, Canada, Ceylon, India, Indonesia, Japan, Korea, Laos, Malaysia, Maldives Islands, Nepal, New Zealand, Pakistan, the Philippines, Thailand, Viet-Nam and the United States; the latter is also engaged in a substantial program of economic aid in the same region. Afghanistan and the Maldives Islands are the latest members and were admitted to membership in 1963.

The Colombo Plan is supervised by a Consultative Committee composed of Ministers of the member countries, who meet once a year to review projects and exchange views on policy matters. As a consultative body, it makes no collective policy decisions binding member countries; a Council for Technical Co-operation, on which Canada is represented, meets regularly in Ceylon to develop the technical co-operation program of the Plan. Consultative Committee meetings were held in Karachi in 1952, New Delhi in 1953, Ottawa in 1954, Singapore in 1955, Wellington in 1956, Saigon in 1957, Seattle in 1958, Jogjakarta in 1959, Tokyo in 1960, Kuala Lumpur in 1961, Melbourne in 1962, Bangkok in 1963 and London in 1964. At the Jogjakarta meeting it was agreed to extend the Colombo Plan for another five years from June 1961, and it was similarly extended for a further five years at the London meeting in 1964. Reports of the Committee on progress and future plans are published after each annual meeting; each report also contains sections describing the activities of member countries.

From the inception of the Plan in 1950 through March 1966, Canada made available a total of \$670,619,000 in grant aid for capital and technical assistance projects in South and Southeast Asia. Although nine countries are now receiving capital assistance from Canada, the largest contributions have so far been made to Ceylon, India, Malaysia and Pakistan. The Canadian contribution consists primarily of direct assistance to various development projects, including equipment for multi-purpose irrigation and hydro-electric projects, power-generating plants, construction and fisheries projects and resources surveys, hospital equipment and cobalt therapy units, as well as educational and laboratory equipment and books. It has also included gifts of raw materials, commodities and foodstuffs, such as industrial metals, asbestos, fertilizer, wheat, wheat flour and butter, from the internal sale of which recipient governments have been able to raise funds to meet local costs of economic development projects.

Under the Technical Assistance Program, up to March 1966, more than 3,500 persons from all countries in the area had come to Canada for training in a variety of fields, the major ones being public administration and finance, agriculture, co-operatives, engineering, mining and geology, statistics, health education and social welfare. More than 375 Canadian experts had been sent abroad for service in Colombo Plan countries in such fields as fisheries, agriculture, engineering, mining and prospecting, co-operatives, public administration, education and vocational training, and public health. Other Canadians were employed on aerial resources survey teams and on the installation and operation of capital equipment.

**Commonwealth Caribbean Program.**—In 1958, when the Federation of the West Indies was being formed, Canada undertook a five-year \$10,000,000 program of economic and technical assistance. Following the dissolution of the Federation in 1962, it was decided to continue providing assistance to its component territories—Jamaica, Trinidad and Tobago, Barbados, British Guiana (Guyana), British Honduras and the Leeward and Windward Islands—and, since then, a total of \$21,180,000 in loans and grants has been made available to the area, including \$10,000,000 under the 1965-66 program.

Under this program, the area and its territories have been provided with two passenger-cargo ships for inter-island transportation, a deep-water wharf at St. Vincent, a residence for the University of the West Indies in Trinidad, port-handling equipment for five harbours and, for several of the smaller islands, schools, warehouses and freshwater supply facilities. Projects under way include an aerial survey of Trinidad, a scheme for the expansion and improvement of Trinidad's dairy herds, the provision of rural schools, teacherages and a sewerage system in Jamaica and a prefabricated fish-packing plant in Guyana, and the construction of a bridge in British Honduras.

A substantial amount of technical assistance has also been given. During the year ended Mar. 31, 1966, training programs were arranged in Canada for 431 students from the Commonwealth Caribbean, the fields of study including agriculture, engineering, fisheries, forestry, medicine and public administration. In addition, 130 Canadians served in the Commonwealth Caribbean, including teachers, soil surveyors, and advisers in the fields of statistics, legal drafting, housing, films, radio broadcasting, postal services, Indian affairs, technical education and harbour management.

**Special Commonwealth African Assistance Plan.**—In the autumn of 1960 the Canadian Government undertook, subject to parliamentary approval, to contribute \$10,500,000 to a Special Commonwealth African Assistance Plan (SCAAP) over a three-year period beginning Apr. 1, 1961. This program arose from discussions at the Meeting of Commonwealth Prime Ministers in 1960. Although entirely a Commonwealth scheme, SCAAP is essentially the counterpart in Africa of the Colombo Plan in Asia. The main donor countries are Britain, Canada, Australia and New Zealand. Some of the newer Commonwealth members, particularly India and Pakistan, have been able to provide limited amounts of technical assistance in fields in which they have experience and specialized knowledge. All Commonwealth countries and dependent territories in Africa qualify for development assistance under the SCAAP program.

As occurred in other areas of Canada's expanding aid program, the level of grant aid to SCAAP increased in 1965-66 to \$9,500,000 from \$6,500,000 in the previous fiscal year and development loan assistance to \$5,000,000 from \$4,500,000. In 1965, the first Canadian development loan in Africa was extended to Nigeria in the amount of \$3,500,000, and early in 1966, two loans totalling \$2,450,000 were granted to Tanzania. A \$2,000,000 food aid grant in the form of wheat flour was made to Ghana.

Technical assistance programs continued to receive major emphasis. During 1965-66, 436 Canadian teachers, professors, and Canadian technical experts were on assignment in Africa while 526 African students received academic and technical training in Canada. This represented a sharp increase in the program of technical assistance from the previous year.

Canadian capital assistance has concentrated on projects assigned a high priority by the recipient country and in which Canada has a high degree of expertise. These included aerial mapping and survey work, forest inventories, pulp and paper survey and forest products development, irrigation and land reclamation, medical training and wheat research, geological surveys and mineral exploration, and the provision of equipment for schools and national parks. A major Canadian-Ghanaian joint effort was the building, equipping and staffing of the Trades Training Centre at Accra at an estimated Canadian cost of \$1,155,000. The institution was formally opened in July 1966. A similar institution is planned for Benin City, Nigeria.

**The Commonwealth Scholarship and Fellowship Plan.**—The proposal to establish a Commonwealth Scholarship and Fellowship Plan was made at the Trade and Economic Conference held at Montreal in September 1958. The Conference envisaged a scheme of 1,000 university scholarships, of which Britain undertook to provide one half and Canada one quarter. The details of the proposed scheme were worked out at the Commonwealth Education Conference at Oxford in 1959. This Plan was designed to enrich the

intellectual life of each country of the Commonwealth by enabling an increased number of its brighter students to share in the wide range of educational resources available throughout the Commonwealth and thus promote the equality of educational opportunity at the highest level. During the academic year 1965-66, there were 222 Commonwealth scholars in Canada; since the Plan first became operational during 1960-61, a total of 563 scholars have come to Canada for advanced study.

In 1965, Research and Visiting Fellowships were introduced as part of the Canadian contribution to this Plan. It is expected that each year three Research Fellowships will be awarded for a full academic year and five Visiting Fellowships for shorter periods. These Fellowships will enable senior educationists from other Commonwealth countries to visit Canadian universities and other educational institutions to carry out investigations, study or research in their particular fields. During the 1965-66 academic year, four Visiting Fellowships and three Research Fellowships were awarded.

**Assistance to French-Speaking States in Africa.**—In April 1961 the Canadian Government announced an offer of assistance in the educational field to the French-speaking states in Africa and subsequently appropriated \$300,000 for this purpose for each of the years ended Mar. 31, 1962, 1963 and 1964. It was decided at the commencement of this program that emphasis should be placed on the provision of Canadian teachers for Africa. For the year ended Mar. 31, 1965, aid was increased and an allocation of \$4,000,000 was provided to allow for development of a capital assistance program as well as expansion of technical assistance. During that year, 67 teachers served in French-speaking Africa and 54 students received training in Canada. Preliminary surveys for bridge construction and hydro-electric development were carried out; an agriculture education survey of six countries was begun; arrangements were made to supply heavy equipment to assist the Republic of Guinea in its roads improvement program; a series of educational films was offered to Cameroon, Central African Republic, Chad, Congo, Dahomey, Morocco, Niger, Togo and Upper Volta; and a contribution of \$500,000 was made to the UN Congo (Leopoldville) Civilian Fund.

In the 1965-66 fiscal year the allocation totalled \$7,500,000—\$5,500,000 in grant funds and \$2,000,000 in development loans. There were 155 teachers on assignments to 16 French-speaking African countries and 97 trainees in Canada. Technical and capital assistance was given to the University of Rwanda; paper for the production of educational literature was supplied to Cameroon, Congo (Leopoldville) and Guinea; film vans and films were made available to Guinea and Gabon; arrangements were made to participate in a livestock improvement program in Cameroon, and a cadastral survey in Morocco; and, as in previous years, \$500,000 was granted to the UN Congo (Leopoldville) Civilian Fund.

**Latin American Program.**—A bilateral Canadian aid program for Latin America was initiated in December 1964, when the Canadian Government concluded an agreement with the Inter-American Development Bank (IADB) by which Canada allocated \$10,000,000 in 'soft' development loan funds for use in high-priority economic, technical and educational projects in Latin America. This initial allocation was augmented in September 1965 with the provision of an additional \$10,000,000 in development loan funds for the area.

Under the terms of the agreement, the IADB selects and processes proposed loan projects before submitting those considered suitable to the Canadian Government for its approval. By mid-1966, two Canadian development loans totalling \$4,500,000 had been made available—the Port Authority of Acapulco, one of the main Pacific seacoast ports of the Central American Republic of El Salvador, was granted an interest-free development loan of \$3,240,000 for the expansion and improvement of port facilities, and Canadian development loan funds of up to \$1,260,000 were made available to the Republic of Ecuador to finance a resources survey of 13,000 sq. miles of agricultural and forest land in that country's Guayas River Valley.

**Co-operation with the United Nations and its Specialized Agencies, and with Other International Aid Programs.**—In addition to the annual contributions made to the United Nations Expanded Programme of Technical Assistance, Canada arranges training programs in Canada for individuals studying under the auspices of the different Specialized Agencies. This service is also extended to the technical assistance program of the International Co-operation Administration of the United States as well as to other international aid organizations. Up to Mar. 31, 1965, more than 2,000 individuals had come to Canada through the various agencies from more than 100 countries in all parts of the world. Assistance is also given by recruiting Canadians for service with the Specialized Agencies on specific technical assistance assignments in under-developed countries.

**External Aid Office.**—As of Nov. 9, 1960, the operation and administration of Canada's external assistance programs became the responsibility of the External Aid Office, established by Order in Council of that date and placed in charge of a Director General.

As mentioned under the separate programs above, additional funds were made available for grant assistance in 1964-65. Canada also introduced a development loan program for which \$50,000,000 was authorized by Parliament on a non-lapsing basis. The terms of the loans are comparable with those of the International Development Association—up to 50 years maturity, non-interest-bearing, ten-year grace period, and 0.75 of 1 p.c. service charge.

Also during 1964-65, Parliament approved for the first time the establishment of a separate food aid program under which the External Aid Office is able to purchase food products to meet part of the Canadian contributions to the FAO World Food Program and to meet the needs of countries requesting this form of Canadian assistance.

### **Subsection 5.—Organization for Economic Co-operation and Development**

The Organization for Economic Co-operation and Development (OECD) was established in October 1961 as successor to the OEEC, with Canada and the United States joining the countries of Western Europe as full members of the new body. Japan, previously a member of the Development Assistance Committee, became, in May 1964, a full member of the OECD and the first member from outside Western Europe or North America.

The prime purpose of the OECD is to promote among member governments co-operation in the fields of economic policy, trade and assistance to developing countries, although it also provides a valuable forum for discussion of common problems in agriculture, industry, finance, technology and manpower policy. In 1963, Ministers approved an annual growth target for member countries for the next seven years of 4 p.c. in real gross national product. Because of its development from the former OEEC, the Organization was at first concerned largely with questions of primarily European interest but, as its membership expanded, it has become increasingly a recognized forum for broader consultation among advanced industrial countries, particularly on questions of economic and financial policy and on the problems of the developing countries. In this latter regard, the OECD now constitutes the main forum for consultations among developed countries concerning the work of the UNCTAD Trade and Development Board, and its committees.

The OECD brings together government officials as well as representatives of private business, labour unions, universities and other non-governmental bodies in both deliberative and consultative capacities, and provides for international liaison among such groups. Within Canada, liaison has been established with the business community through the Canadian Business and Industry Advisory Committee, which was established in 1962 and comprises representatives of the Canadian Chamber of Commerce, the Canadian Council of the International Chamber of Commerce and the Canadian Manufacturers' Association. Parallel arrangements exist for consultation with Canadian labour organizations.

*The interpretation of the symbols used in the tables throughout the Year Book will be found on p. viii of this volume.*

### Section 1.—Census of Population

This Section presents only a brief summary of the voluminous data on population recorded by the 1961 Census of Canada, with certain comparable data from earlier censuses. The results of the limited population census taken on June 1, 1966 were not available at the time of preparation but 1966 figures for as many of the tables included in Subsections 1 to 6 and Subsection 10 as are obtainable immediately before this volume goes to press will be presented in Appendix II. The 1966 Census did not include questions on ethnic origin, birthplace, religious denomination, language or mother tongue so that the 1961 data in Subsections 7 to 9 will remain the latest available until the taking of the comprehensive decennial census in 1971.

Detailed census data are published in a series of reports which are obtainable from the Queen's Printer or the Dominion Bureau of Statistics. A list of these publications is available on request from the Information Division of the Dominion Bureau of Statistics.

#### Subsection 1.—Growth and Movement of Population†

**Population Growth.**—Canada's population stood at 18,238,000 in 1961 as against 10,377,000 in 1931 and 5,371,000 in 1901. In the first decade of the century, the gain of 34 p.c. was greater than in any censal period up to 1961. Growth was associated with the opening up of the West for settlement and massive immigration from overseas. During the 1901-11 period, about 1,760,000 immigrants entered the country and natural increase

\* See also Appendix II.

† See footnote on p. 183.

Vancouver today has a population of almost 1,000,000.

The site of Vancouver in 1867 was only a landing place for fur traders and adventurers. By 1888 it had a population of 10,000 and had already been incorporated as a city.

Fort Edmonton on the North Saskatchewan River, about 1870.

Montreal, founded in 1642, became a city in 1832—to its population of about 100,000 in 1867 it has added more than 2,300,000.

St. James Street, Montreal, on a winter afternoon in 1875.

Edmonton became a city in 1904 when it had about 5,000 residents—today its population is close to 400,000.

ONE HUNDRED YEARS, measured against the backdrop of history, is a very short time, but long enough to have seen an unbelievable change in this once vast virgin land of Canada, to have seen its distances and isolations diminished, to have seen its primitive life evolve to sophistication, to have seen great cities established and grow, straining their boundaries, their centres rising skyward in concrete and steel, their people active and prosperous. In the forefront of progress in the past quarter-century, Canada has made tremendous strides in every area—industrial, social and cultural—and, taking advantage of the miracles of modern man's devising, moves forward still with increasing speed. It is difficult now to think that one hundred years ago only a handful of buildings lined a remote western bay where now stands the centre of the great metropolis of Vancouver; that a wooden fort overlooking the North Saskatchewan River marked the site of the now burgeoning city of Edmonton, oil centre of the mid-West; that Montreal, with its then 200-year history and its population of 100,000, was Canada's largest city, destined to become one of the major commercial and industrial cities of the world, harbouring close to 2,500,000 people living very much at 20th century tempo; that other small settlements and uninhabited sites would come to take their places in the chain of booming cities and industrial towns across this great land.

amounted to an estimated 1,000,000. As the total increase in population was 1,835,328, it is evident that there was substantial emigration during the period. In the 1911-21 period, population growth dropped to 22 p.c. Military losses in the First World War and losses during the influenza epidemic, which together amounted to about 120,000, were a factor in this decline. Although the flow of immigrants was reduced during the war years, it had been very heavy immediately preceding the War, so that the total number for the period (1,612,000) was very close to that for the previous censal period. However, emigration was also extremely high and the increase in population amounted to 1,581,306, representing 2 p.c. per annum compared with 3 p.c. in the 1901-11 period.

In the decade 1921-31, the rate of increase dropped to 18 p.c. Immigration fell to 1,200,000 and emigration was estimated at 1,000,000. Thus the increase in population, which amounted to 1,588,837, was only 229,000 greater than the natural increase. A feature of this period was the rapid growth of population in Western Canada, partly the result of immigration and partly the result of an influx of people from Eastern Canada. During 1931-41, the population increase was just under 11 p.c. During the depressed conditions of the 1930's, marriage and birth rates were significantly lower and only 150,000 immigrants came to Canada, although, in addition, 75,000 Canadians returned from the United States. Emigration was also much lower than in the previous decades, amounting to an estimated 250,000. Natural increase was only 1,220,000, the crude birth rate falling from 27 per thousand of the population in the 1921-25 period to 24 per thousand in the succeeding five-year period and to 20 per thousand during much of the 1931-41 decade. During 1941-51, population growth was restored to pre-depression levels. Excluding Newfoundland which became part of Canada in 1949, it amounted to 19 p.c.; including Newfoundland it was 22 p.c. Much of the increase took place in the second half of the decade, reflecting heavy postwar immigration and a sharp rise in the marriage and birth rates.

In the 1951-61 period, the population growth rate at 30 p.c. came close to approaching the extremely high rate of the first decade of the century. However, the two periods contrast in many ways. In the early period there was a wider dispersal of population increases as whole regions across the Continent were opened up; in the recent period there was a concentration of growth in urban communities although some spreading of population into newly developed northern areas took place. Natural increase accounted for about 75 p.c. of the growth. Although there was some decline in the death rate, the trend of natural increase reflected very closely that of the crude birth rate which began to rise during the War and remained high throughout the period. Net immigration accounted for the remainder of the increase; during the decade, 1,542,853 immigrants entered the country, more than double the estimated emigration. Although all provinces gained in population during 1951-61, the rates of increase varied widely. The greatest increases resulted from a combination of natural increase and net migration which in the two large provinces of Central Canada and the two most westerly provinces accounted for over 87 p.c. of the total actual increase. In contrast, increases in the other six provinces were entirely accounted for by natural increase.\*

\* An outline of growth in the 1961-66 period, based on the results of the 1966 Census, is included in Appendix II. An outline of the growth of population in Canada since the beginning of the seventeenth century may be found in Vol. I of the 1931 Census. Other accounts of population growth prior to the present century are included in Vol. I of the 1941 Census and Vol. X of the 1951 Census.

# 1.—Numerical Distribution of Population by Province, and Percentage Change from Preceding Census, Decennial Census Years 1901-61

NOTE.—Populations for the decennial census years 1871, 1881 and 1891 are given in the 1956 Year Book, p. 149. The populations of the Prairie Provinces in 1906, 1916, 1926, 1936 and 1946 will be found in the 1951 edition, p. 131, and census populations for 1956 in the 1961 edition, p. 146.

Canada.....	14,009,429	4,468,340	1,320,142	3,148,198	1,542,853	4,228,518	1,080,620	18,238,247

Table 3 shows the natural increase and the total population increase for Canada and the provinces in the periods 1941-51, 1951-56 and 1956-61. The balance between the total increase in population and the natural increase during a period represents the difference between inward and outward movements, i.e., net migration. The net migration data shown for provinces indicate the net movement of population arising partly from interchange of population between provinces and partly from persons entering and leaving the country.

**3.—Numerical Changes in the Population of the Provinces through Natural Increase and Migration 1941-51, 1951-56 and 1956-61**

<sup>1</sup> Includes the Yukon and Northwest Territories.

The earlier movement of population in Canada from east to west has not been apparent since the 1920s. Although British Columbia has continued to show population gains from migration since 1931, much of this gain has been at the expense of the Prairie Provinces. Although the three Prairie Provinces lost by migration about 267,000 persons between 1941 and 1951, they gained 25,000 in the period 1951-56 and 18,000 in the period 1956-61. Manitoba lost almost 61,000 people between 1941 and 1951 but only 5,000 persons since then. Saskatchewan has been a consistent loser since 1941, losing on the average almost 20,000 a year during the 1940s and around 8,000 a year during the 1950s. Alberta lost only about 7,000 in the decade 1941-51 and gained close to 65,000 in each of the five-year periods 1951-56 and 1956-61. British Columbia gained through migration at the rate of about 23,000 a year during the 1940s, about 27,000 a year in the first half of the 1950s and 21,000 annually in the 1956-61 period. On an absolute basis, Ontario received more people through migration than did British Columbia but, in relation to its larger population, the gain was only about one third as important. Most of Ontario's growth through migration was from immigration rather than interprovincial movement of population. Quebec had a slight loss between 1941 and 1951 and a considerable gain in the next ten years, due also to immigration. The Maritimes as a whole lost 175,000 persons over the quarter-century.

### Subsection 2.—Density of Population

Table 4 shows the density of population in the different provinces and territories of Canada in the census years 1951, 1956 and 1961. Omitting the Yukon and Northwest Territories where population density is exceedingly low, there were 8.66 persons per square mile in Canada as a whole in 1961 compared with 6.65 per square mile in 1951. The greatest increase in the ten years was shown by Ontario where there were 4.76 more persons per square mile, followed by Nova Scotia with an increase of 4.62. However, it should be remembered that all provinces with the exception of the Maritimes have large areas almost devoid of population and that concentrations in other areas are very high.

## 4.—Land Area and Density of Population, by Province, Census Years 1951, 1956 and 1961

Province or Territory	Land Area	Population 1951		Population 1956		Population 1961	
		Total	Per Sq. Mile	Total	Per Sq. Mile	Total	Per Sq. Mile
	sq. miles	No.	No.	No.	No.	No.	No.

## Subsection 3.—Rural and Urban Population

For the 1961 Census, all cities, towns and villages of 1,000 or more population, whether incorporated or not, were classed as urban; also classed as urban were the urbanized fringes of census metropolitan and other large urban areas, and the urbanized fringes of certain smaller cities where the city and fringe totalled 10,000 or more persons. The remainder of the population was classed as rural.

Table 5 classifies the 1961 rural population according to farm and non-farm residence and the urban population by size groups; in the latter classification, each municipality (or part) in an urbanized area is allocated to the same size group as the total urbanized area of which it forms a part. The figures show that, in 1961, almost 70 p.c. of Canada's population were urban dwellers and 53 p.c. lived in or on the fringes of urban centres having a population of 30,000 or more. Only about 12 p.c. lived on farms.

**5.—Rural Population classified as Farm and Non-farm, and Urban Population classified by Size Group, by Province, Census 1961**

Province or Territory	Rural			Urban				
	Farm <sup>1</sup>	Non-farm	Total	1,000 to 9,999	10,000 to 29,999	30,000 to 99,999	100,000 or Over	Total

<sup>1</sup> Excludes 55,615 persons living on farms in localities classed as urban.

**Subsection 4.—Populations of Incorporated Cities, Towns and Villages and of Metropolitan Areas**

The population of all incorporated cities, towns and villages is classified by size group in Table 6 for the census years 1951, 1956 and 1961. During the ten-year period, the number of such centres increased by 178 and the proportion of the total population living in them rose from 56.7 p.c. to 60.7 p.c. Although there was a slight decrease in the number of centres having fewer than 1,000 persons, the number with over 50,000 increased from 19 to 29 and the proportion of the total population in these larger centres went up from 27.5 p.c. to 29.0 p.c.; the proportion in centres of from 1,000 to 50,000 increased from 26.1 p.c. to 29.3 p.c. in the same comparison.

Census metropolitan areas have been established for groups of urban communities that are in close economic, geographic and social relationship. Table 8 shows the 1961 population of each area with the corresponding 1951 and 1956 figures for the same area as in 1961. As indicated by the last column, most of these metropolitan areas have shown remarkable increases in population during the decade. In 1961 they accounted for 44.8 p.c. of the total population as compared with 40.2 p.c. in 1951.

### 8.—Populations of Census Metropolitan Areas, 1951, 1956 and 1961

(Areas as of 1961)

## Subsection 5.—Sex and Age Distribution

The sex and age distributions of a population are basic to most, if not all, other analyses, as they influence employment, marriage, birth and death rates and a multitude of other factors that are of great importance in the national life.

**Sex.**—The Canadian population has always been characterized by an excess of males, although this excess has been greatly modified in recent years. Since Confederation, the peak sex ratio for Canada as a whole was 113 reached in 1911, a census year that fell within a period of heavy immigration; the 1961 ratio was 102. In the older settled provinces east of Manitoba, the ratio varied between 104 in 1911 and 101 in 1961 but in the western provinces which were being opened to settlement in the early years of the century the ratio changed from a high of 146 in 1911 to 105 in 1961.

The sex distributions and variations in ratio among the provinces are given for the census years 1951, 1956 and 1961 in Table 10.

**10.—Sex Distribution of the Population and Sex Ratio, by Province, Census Years 1951, 1956 and 1961**

**Age.**—Recent trends in vital rates and immigration have had a considerable effect on the age composition of the Canadian people. A high birth rate together with a low death rate among children added nearly 2,000,000 to the number of persons under 15 years of age between 1951 and 1961, an increase of 46 p.c. The proportion of this group to the total population increased from 30.3 p.c. to 34.0 p.c. in the ten-year period. The population of working age—those of 15 to 64 years of age—increased more slowly at 22.9 p.c. in the decade and the relative proportion of this group declined from 61.9 p.c. to 58.4 p.c. Without the influence of immigration in the 1951-61 period, the proportion of this group would have been much lower since a large part of it consisted of persons born in the low birth rate period of the 1930s. The proportion of persons 65 years of age or over in 1961 was 7.6 p.c. compared with 7.8 p.c. in 1951.

Table 11 shows the population of Canada classified by five-year age groups and by sex for the census years 1951, 1956 and 1961. The provincial distribution by specified age group is given for 1961 in Table 12.

### Subsection 6.—Marital Status

After age and sex, marital status analysis is probably next in importance from a vital, economic and social viewpoint. The number of married females between 15 and 45 years of age is a most significant factor in the fertility of a population. If the proportion of females in this group is low, the expected birth rate will be low. In 1961, 62.9 p.c. of all married females were in the 15-44 age group compared with 64.0 p.c. in 1951, 61.2 p.c. in 1941 and 63.5 p.c. in 1931.

The high birth rate in the 1951-61 period, besides having a notable effect on the general population growth and age composition, has been an influence on the 32.7-p.c. increase in the single population. During the same period, the married population increased by 28.2 p.c. and the widowed by 21.0 p.c. Other striking features are the excess of married males (largely consisting of male immigrants whose wives had not yet joined them) and the great preponderance of widows over widowers.

The marital status of the population in 1961 is shown in Table 13.

13.—Marital Status of the Population, by Age Group and Sex, Census 1961

### Subsection 7.—Ethnic Groups and Birthplaces

**Ethnic Groups.**—A population made up of diverse ethnic groups gives rise to political, social and economic problems quite different in nature from those of one with a more homogeneous ethnic composition. These problems are mitigated, however, to the extent

that certain groups are more easily integrated than others. It is equally true that the different backgrounds of various ethnic groups lend variety and diversity to the national life.

The two basic groups in the Canadian population are the French and British Isles ethnic groups. The influence of the French in Canada covers a longer period and, with the exception of the 1921 Census, this group has always exceeded in number any of the components of the British Isles ethnic group.

In 1961, each person was asked the question: "To what ethnic or cultural group did you or your ancestor (on the male side) belong on coming to this Continent?". The language spoken at the time by the person, or his paternal ancestor, was used as an aid in determining the person's ethnic group. The classification is given for 1961 in Table 14 with comparative figures for 1951 and 1941. Information on ethnic group was not collected in the 1956 Census.

<sup>1</sup> Includes persons born in Canada whose province of birth was not stated.

## Subsection 8.—Religious Denominations

In the 1961 Census, enumerators were instructed to record the specific religious body, denomination, sect or community reported in answer to the question: "What is your religion?" Thus it should be noted that census figures do not measure church membership or indicate the degree of affiliation with any religious body. As shown in Table 17, close to eight out of ten persons in Canada stated that they belonged to one of the three numerically largest denominations—Roman Catholic, United Church and Anglican—in 1961. The table gives comparative figures for the census years 1941 and 1951; this information was not collected in the 1956 Census.

**17.—Principal Religious Denominations of the Population, Census Years 1941, 1951 and 1961**

Religious Denomination	1941	1951	1961	
	No.	No.	No.	p.c.

<sup>1</sup> Includes "Hutterites".

<sup>2</sup> Includes "Other Greek Catholic".

<sup>3</sup> Exclusive of Newfoundland.

**Subsection 9.—Languages and Mother Tongues**

The term "official language" used by the census refers only to the English and French languages.\* "Mother tongue" is the language a person first learned in childhood and still understands. It should be noted that persons indicated as speaking "English only" or "French only" with respect to official language may also speak other languages and have a mother tongue other than English or French. The use of the English and French languages in Canada at the time of the 1961 Census is discussed in a special article appearing in the 1965 Year Book at pp. 180-184. Table 18 gives the numerical and percentage distribution of official language by province.

\* The British North America Act, 1867 (Sect. 133) makes provision for the use of the English and French languages as follows:—

"Either the English or the French Language may be used by any Person in the Debates of the Houses of the Parliament of Canada and of the Houses of the Legislature of Quebec; and both those Languages shall be used in the respective Records and Journals of those Houses; and either of those Languages may be used by any Person or in any Pleading or Process in or issuing from any Court of Canada established under this Act, and in or from all or any of the Courts of Quebec.

The Acts of the Parliament of Canada and of the Legislature of Quebec shall be printed and published in both those Languages."

**18.—Numerical and Percentage Distribution of the Population Speaking One, Both or Neither of the "Official" Languages, by Province, Census 1961**

NOTE.—See text and footnote above re the term "official language".

### Subsection 10.—Households and Families

This Subsection contains limited statistics on households and families recorded at the 1961 Census; more detailed information may be found in 1961 Census reports relating to households and families (see also p. 182).

A household, as defined in the census, consists of a person or a group of persons occupying one dwelling.\* It usually consists of a family with or without lodgers, employees, etc. However, it may consist of a group of unrelated persons, of two or more families sharing a dwelling, or of one person living alone. Every person is a member of some household and the number of households equals the number of occupied dwellings.

The total number and the average size of households are given by province for the census years 1951, 1956 and 1961 in Table 20. The relatively stable average of persons per household indicates an almost equal rate of increase for the dwelling stock as for the population.

\* A dwelling is defined as a structurally separate set of living quarters, with a private entrance either from outside the building or from a common hall, lobby, vestibule or stairway inside. The entrance must not be through another person's living quarters.

**20.—Households and Persons per Household, by Province, Census Years 1951, 1956 and 1961**

<sup>1</sup> Exclusive of the Yukon and Northwest Territories.

The average size of the Canadian family\* made a further gain between 1956 and 1961, continuing the trend of the 1951-56 period. Every province except Quebec and Saskatchewan participated in this increase, as shown in Table 21.

**21.—Families and Persons per Family, by Province, Census Years 1951, 1956 and 1961**

Closely related to the number of families per household, and also an indicator of living conditions, is the type of family. In 1961, 94.3 out of every 100 families in Canada were maintaining their own households as compared with 92.3 in 1956 and 90.2 in 1951, an apparent steady improvement in living conditions. The families not maintaining their own households fell into two main sub-categories—families related to the head of the household and non-related lodging families. The few who did not fit either of these sub-categories were mostly families of employees living in their employer's household.

There were 7,777,137 children in families in 1961. These are limited by definition to children never married and under 25 years of age who were living with their parents or guardians at the time of the census. In Table 22, the number of children is classified to show the number in each of four separate age groups corresponding roughly to pre-school-age children, those of elementary school age, those at the secondary school level, and those of college or working age.

\* A family, as defined in the census, consists of a husband and wife (with or without children who have never married) or a parent with one or more children never married, living together in the same dwelling. Adopted children and stepchildren are counted as own children and, in fact, a family may comprise a man or woman living with a guardianship child or ward under 21 years of age.

Additional household and family classifications are given in the 1963-64 Year Book at pp. 180-181—families classified by age of head, and families classified by marital status and sex of family head; and in the 1965 Year Book at pp. 185-186—households classified by number of persons, households classified by number of families and by number of lodgers, and families classified by type and by province.

## Section 2.—Intercensal Surveys

Intercensal estimates of the population of Canada, of the provinces classified by sex and by age group, and of the major cities and metropolitan areas are constructed as of June 1 each year. These estimates are calculated using the preceding census counts, the annual birth, death and immigration records and other pertinent data on emigration and interprovincial shifts. Following each census, the previous post-censal estimates are adjusted to the newly recorded population figures.

Because of the impending availability of the 1966 Census figures and therefore the early adjustment of the 1962-65 population estimates, intercensal data are not included in this edition of the Year Book. The 1966 population figures obtainable at the time of going to press will be included in Appendix II.

## Section 3.—The Native Peoples of Canada

### The Indians\*

More than 217,000 Canadians are registered as Indians by the Indian Affairs Branch of the Department of Indian Affairs and Northern Development. Registered Indians include all persons descended in the male line from a paternal ancestor of Indian identity, who have chosen to remain under Indian legislation. They are grouped, for the most part, into 551 bands and occupy or have access to 2,269 reserves or settlements having a total area of 5,976,317 acres.

<sup>1</sup> As at Dec. 31.

**Administration.**—Pursuant to the British North America Act, the administration of Indian affairs, which had been under the management of several provinces, came under the jurisdiction of the Government of Canada in 1867. From January 1950 to December 1965, Indian affairs were the responsibility of a Branch of the Department of Citizenship and Immigration. In June 1966 (SC 1966, c. 25) a new department was formed whereby the Indian Affairs Branch joined with part of the Department of Northern Affairs and National Resources to become the Department of Indian Affairs and Northern Development.

The Indian Affairs Branch is composed of a headquarters staff at Ottawa, eight regional offices and 84 field agencies. Attached to the headquarters and regional offices are specialists in such matters as education, economic development, community development, resource management, social welfare, and engineering and construction. Liaison is maintained with the Medical Services Directorate of the Department of National Health and Welfare, the federal agency concerned with the medical care of Indians.

It is the primary function of the Indian Affairs Branch to administer the affairs of Indians in a manner that will enable them to participate fully in the social and economic life of the country. Underlying administrative duties of the Branch include the management of Indian reserves and surrendered lands, the administration of band funds, estates management, enfranchisement of Indians and the administration of treaty obligations.

Five main objectives are being pursued vigorously in an attempt to assist the Indians in adjusting to the pace of social and economic growth. (1) An accelerated program in education places more emphasis on vocational training, retraining for employment, assistance in placement, adult education, kindergartens and a greater use of provincial schools. (2) The program of industrial and resource development has been expanded; in the past the program was mainly dependent on the traditional resources of fur, fish, forestry and farming but opportunities are now being extended to new areas by loans and other incentives to foster industrial development on the reserves and to facilitate the relocation of families to places where full-time employment is available. (3) A five-year program of reserve improvement has been instituted for which \$112,000,000 has been allotted to provide better housing, water and sewerage systems, electrification and roads. (4) To develop local self-government, Indian bands, where possible, are encouraged to operate on the same basis as local municipalities and grants are given where they are required to meet some of the financial needs of the Indian community. (5) Provincial services to Indians are being extended; some provincial services are now provided and, where bands so desire, arrangements can be made with a province to make additional services available.

Eight Regional Indian Advisory Councils have been established by the Department to provide machinery for effective consultation with representatives of the Indian people. Each Council is composed of eight to 12 Indians elected by the bands in the region, as well as representatives of Indian organizations. The consultation procedure is used to interpret

federal policies and to obtain Indian views on matters of policy, proposed legislation, federal-provincial agreements, new programs and proposals to change existing programs. A National Indian Advisory Board has also been formed as a means of bringing together Indians representing all regions. It is made up of 18 representatives who are named by the Regional Councils on a population basis. The function of the Board is to advise the Department on matters of national importance to the Indian people as distinct from matters of regional interest. In addition, Federal-Provincial Co-ordinating Committees have been established and are in operation in most provinces. They meet fairly regularly, some as often as once a month, and perform an important function in guiding the plans and programs of the federal and provincial governments in relation to Indians, and in establishing effective liaison between the governments and a better understanding of their respective objectives, policies and programs.

**Education.**—This major key to continued Indian progress receives ever-increasing support from Indian parents, from their school committees, from non-federal governments and from professional groups specifically concerned with classroom instruction of Indian pupils. The Indian Affairs Branch maintains and operates a number of schools for Indians, but 29,355 of the 61,395 Indian elementary and secondary school population attend non-federal schools. Attendance of Indians at non-federal schools has been arranged, for the most part, through agreements between the Branch and individual school boards. In 1964, however, an agreement was concluded with the Province of Manitoba to provide for a uniform tuition fee to be paid by the Branch for Indian pupils attending schools under the jurisdiction of that province. Manitoba also passed legislation to give Indian children the right to attend any non-federal school.

There are three types of federal schools, all operated at the expense of the Federal Government. On many reserves, day schools provide education for children who live at home. Residential schools care for orphaned children, children from broken homes and for those who, because of isolation or for other reasons, are unable to attend day schools. The third type of school gives instruction to children confined to hospital. All standard classroom supplies and authorized textbooks are used in federal schools, which follow generally the curriculum of the province in which they are located. Financial assistance for pupils attending non-federal schools varies from payment of tuition fees to full maintenance. Promising senior students are awarded scholarships to attend university or vocational school and scholarships are given to those who show promise in the arts.

**Resources and Industrial Development.**—In the field of renewable resource development programs for Indians, co-operation between the provinces and the Indian Affairs Branch, both formal and informal, continued during 1965-66. A greater demand for Canadian wild fur, mainly by European interests, together with a particular interest in long-hair species such as fox and lynx, resulted in substantially higher prices and therefore more revenue to the Indian trappers, giving them an incentive to increase their catch. Commercial fishing operations by Indians continued to yield about 2,000,000 lb. and higher prices were received for certain species, notably yellow pickerel. Products from the forests of the reserves included about 90,000,000 ft. b.m. of lumber, 65,000 cords of pulpwood, 1,000,000 fence posts and 900,000 Christmas trees. During the year, agreements were arranged with the provinces to give better fire protection to these valuable forest resources. It should be noted here that assistance is given to Indian forest workers for training purposes so that they may participate to a greater extent in mechanized forest operations off the reserves. Oil and gas produced from Indian reserves during 1965-66 had an estimated value of \$10,500,000 and revenues to Indian bands from royalties, bonuses and rentals for petroleum leases amounted to \$4,567,000. It is known that many Indian reserves have considerable mining potential which is now beginning to be exploited.

With the consent and participation of the bands concerned, surveys are being undertaken to establish present and potential use of reserve lands. Where required, Indians are being trained to exploit and manage their own lands and are assisted in acquiring the equipment necessary for such development. Greater interest is being shown by many bands in utilizing their reserve lands for industrial and commercial purposes and the development of resources on or near reserves is leading to the formation of co-operatives and other processing facilities at more remote reserves. The adaptation of Indian people to Canadian industrial and business life is encouraged, in their reserve communities, by financial and professional help in operating small businesses.

Under a community employment program, opportunities are provided for the Indian people to acquire knowledge and experience in the duties and responsibilities of self-government, to acquire the ability to develop the resources and improve the public areas on their reserves and to become oriented to wage employment. During 1965-66, 491 projects costing \$1,277,010 were financed under this program.

Employment assistance officers promote Indian employment and vocational training measures in a wide range of occupations. The program includes on-the-job and in-service training to equip Indians for employment in skilled, semi-skilled, clerical and administrative classifications, as well as financial assistance to help defray the expenses they encounter as they enter full-time employment, for such items as tools, clothing, room and board, etc.

In 1965-66, Indian people produced about \$1,200,000 worth of handicraft items for sale and for their own use. Interest in their traditional crafts and expanding markets is bringing about a steady growth in this important industry and to encourage this source of revenue the Indian Affairs Branch maintains a marketing and advisory service, conducts national promotional programs and gives technical and financial assistance. Many Indian people have established successful enterprises based on the production and sale of arts and crafts.

**Community Development.**—During 1965-66, under the community development program of the Indian Affairs Branch, efforts of the Indian communities were mobilized with those of the government for the benefit of the Indian people. During the year, Branch officers were trained in community development techniques and practices; the number on strength at Mar. 31, 1966 was 57. Several provinces participated in community development on a project basis, with the Federal Government sharing the costs to the extent of \$226,634. Grants were made available to Indian bands lacking funds, in order that they might, on their own initiative, plan projects, manage the finances required and effect social, economic and physical improvement on their reserves. A major use of the grants will be to hire, train and employ band civil servants; 19 were hired during 1965-66, including managers, secretaries, road foremen, special constables and welfare administrators.

A program was started in 1965 to develop and perpetuate Indian culture through encouraging Indian arts and fine crafts, literature, dancing, folk songs and related activities. Incentives include grants, subsidies and scholarships to individuals, groups and organizations for the development of their creative and performing talents.

**Physical Development of Reserves.**—Early in 1966 a plan was announced by the Federal Government for the expenditure of \$112,000,000, over a five-year period, for the physical improvement of Indian reserves. The program provides for assistance for housing, safe water supply, sanitation facilities, electrification of homes and improved roads in Indian communities. Following a study of housing conditions on reserves, completed in February 1965, it was indicated that there was a need for 12,000 new homes. The objective of the program is to build these homes with about \$75,000,000 in public funds joined with

band funds and personal contributions; 1,500 will be constructed in 1966-67. Some \$10,000,000 will be spent to supply safe drinking water and proper sewage disposal and a rural electrification program is being undertaken, using public utilities wherever possible, at a cost of about \$7,000,000. The remainder will go toward providing better roads. Expenditures on these projects during 1966-67 will amount to \$13,276,545.

**Welfare.**—The provision of general welfare assistance and services to indigent Indians is an essential factor in assisting them to raise their social and economic status. The welfare program administered by the Indian Affairs Branch includes public assistance (food, clothing and shelter) to dependent Indians and certain categories of non-Indians living on reserves, care and maintenance of children and adults, and rehabilitation services for physically and/or socially handicapped Indians. Since January 1965 the Branch has adopted the same rates of assistance and the same eligibility conditions as apply to other recipients of public assistance in the Northwest Territories, British Columbia, Alberta, Saskatchewan, Manitoba and Ontario. The scale of food assistance established by the Branch continues in Quebec and the Maritime Provinces.

As there is no specific federal welfare legislation in respect to Indians, the Indian Affairs Branch relies on provincial welfare legislation and provincially accredited welfare agencies for the enforcement of such legislation. In the field of child welfare, the Federal Government has entered into agreement with 25 children's aid societies in Ontario whereby Indian children may receive the same services as non-Indians in accordance with provincial child welfare legislation. There are similar agreements with the Governments of Manitoba and Nova Scotia. The Indian Affairs Branch assumes financial responsibility for both the administrative and maintenance costs of Indian children who are placed in the care of such agencies. Some provinces provide services on a voluntary basis and, by informal arrangements, the Federal Government pays the cost of maintenance of children placed in foster homes or institutions. Where such services are not available, Indian Affairs Branch staff, with the consent of parents or guardians, arrange for care of neglected children in foster homes or institutions. The Branch provides maintenance and care in homes for the aged and other institutions for physically and socially handicapped adults who do not require active medical treatment.

In general, provincial rehabilitation programs are extended to handicapped Indians on the same basis as to non-Indians. Under separate agreements with the Alberta Tuberculosis Association, the Saskatchewan Society of Crippled Children and Adults and the Manitoba Sanatorium Board, the Federal Government assumes financial responsibility for full maintenance and tuition on behalf of Indian students participating in upgrading and social orientation programs in these provinces. The Federal Government is negotiating cost-sharing agreements with provinces to provide Indian residents the full range of welfare programs administered by provincial governments. A welfare agreement between the Government of Ontario and the Federal Government allows for the inclusion of Indians in the established welfare program of that province.

In addition to the extensive welfare program for Indians financed and administered by the Indian Affairs Branch, welfare services and social benefits available to Indians in Canada include: (1) programs under which Indians are eligible for such categorical benefits as family allowances, youth allowances and old age security, administered by the Department of National Health and Welfare; (2) programs financed jointly by federal and provincial governments and administered by provincial governments, such as old age assistance and blind and disabled persons' allowances; and (3) specific programs established by provincial governments—in Ontario, Indian women may receive mothers' allowances and assistance to widows and unmarried women; indigent Indian mothers in Quebec are eligible for needy mothers' allowances; and, upon application, abandoned children and adult Indians in Nova Scotia receive certain benefits in accordance with the Nova Scotia Social Assistance Act.

### The Eskimos\*

There are altogether about 13,000 Eskimos in Canada, spread out over the Northwest Territories, Arctic Quebec and Labrador. Although many of them still depend to a great extent on game and fish for subsistence, they have enjoyed marked improvement in their circumstances in the past ten years. Their traditional nomadic way of life is giving way to that of a more settled wage-earner and they are becoming established in permanent communities where opportunities are greater for education, health services and employment. In addition to those self-employed in such activities as fishing, hunting and trapping, many of whom are members of co-operatives, Eskimos are working in a variety of fields—as civil servants, clergymen, aircraft pilots, miners, carpenters, mechanics, diesel and tractor operators and oil drillers. An Eskimo manages the CBC radio station at Inuvik and another produces Eskimo-language programs for the CBC Northern Service. Eskimo women work as interpreters, waitresses, nursing assistants, secretaries and clerks, in southern as well as northern communities. However, the number in actual wage-earning employment is as yet relatively small and it is the Federal Government's role to prepare, through education, as many of them as wish to do so to enter wage-earning employment and, so that wage-earning opportunities will be available to them, to create a kind of economic climate in the North which will encourage private enterprise to invest in the development of the vast resources of that area. Various federal programs of highway, access road and air-strip construction, resources cataloguing, provision of bulk oil storage facilities and cheap power are under way to assist in this objective.

In satisfying the first primary need of the Eskimo—the safeguarding of his life—the Department of Indian Affairs and Northern Development is now in reasonably regular contact with most of the Eskimo people, even though a good portion of them still follow their nomadic habits. The full range of social services applicable to all Canadians is extended to the Eskimos. Medical care provided for them through the years has been such that the annual natural increase among them is now between 3 and 4 p.c., indicating that the Eskimo population will double in a period of about 20 years. The increasing size of families and the general movement toward living in settlements in many areas have created a need for permanent housing. Through a loans and grants program, initiated in 1959, Eskimos are encouraged to buy their own homes. A \$1,000 or \$2,000 subsidy, depending on the size of the house, covers part of the cost of construction and the owner may borrow the remainder from the Eskimo Loan Fund and repay it on terms adjusted to his income. A man's labour in building his home reduces the total cost. Through this program, basic housing has been provided for more than 1,000 Eskimo families but, because the need is still great and urgent, a new four-year rental housing program was started in late 1965 under which 1,600 houses will be built over a five-year period at a cost of \$12,000,000. The houses will include one, two and three bedroom designs and will be available at rentals that will cover basic furnishings, heat, electricity, water and sewage and garbage services. The rent to be paid will be determined by the family's ability to pay and the difference will be absorbed by the Government. The families in rented houses will be credited with the value of the householder's labour in the construction, maintenance and improvement of his house. In addition, to enable a family to acquire ownership of a rental house, one third of all rent paid can be applied toward its purchase when the family is ready to take this step.

The second need of the Eskimo is education and training—to give him a better chance in competing for employment, to give those with the interest and ability an opportunity to take their proper place as leaders in their home communities or elsewhere, or to give those who will follow the traditional way of life a more meaningful and satisfying existence. The number of schools in the North has grown from 11 in 1952 to 64 at the end of 1965 and a program for construction of school facilities—elementary, secondary, vocational and pre-school—is under way. By 1971, 132 new classrooms, 64 auxiliary rooms and 54 classroom replacements will have been built, as well as facilities to house 1,550 resident students

\* Revised in the Information Services Division, Department of Indian Affairs and Northern Development, Ottawa.

and about 200 school staff members. More than 3,000 young Eskimos attend the present 64 schools, which they share with all other children who live in the North; over 85 p.c. of the school-age population of the Northwest Territories is now in school. Provincial curricula are used but are adapted by committees of experienced northern teachers to relate more closely to those things that are meaningful to northern students. A large number of texts and course outlines have been tailored to the northern scene and a standard Roman orthography has been devised for the Eskimo language. There are Eskimo children in all the high school grades in the Mackenzie District and a few at the high school level in the Eastern Arctic. A program of grants and loans to finance university education for Eskimo, Indian and white children, approved by the Northwest Territories Council in 1963, assures higher education for those who qualify. Vocational education courses with full financial assistance are available at all levels both in the Territories and, by agreement, at various technical institutions in the provinces. At present there are about 400 Eskimos taking advantage of these programs. To provide more skilled workers and raise occupational standards in the North, an apprentice training program was begun in 1964; at present, almost 30 Eskimos are apprenticed in skilled trades. Selection and placement officers are located at the five largest centres in the North, working in close co-operation with the Canada Manpower Division of the Department of Manpower and Immigration. They select people for training to meet the specific requirements of employers, place people in employment and offer counselling service to new employees.

To aid the Eskimos who will continue to live off the land either by choice or by necessity, area economic surveys are conducted to determine what resources are exploitable locally, followed by development programs to take advantage of these resources. In this way, commercial fisheries, logging operations, fur garment manufacturing, specialty food processing and arts and crafts have been undertaken in a number of Eskimo communities.

Eskimo co-operatives have developed very rapidly; there are now 22 co-operatives engaged in commercial fishing, fine crafts, graphic art and sculpture, the operation of retail stores, logging and boat-building and, at Frobisher Bay and Inuvik, groups of Eskimo families have formed housing co-operatives. Products from the co-operatives are maintaining the Eskimos' reputation as skilled artists and craftsmen. The West Baffin Eskimo Co-operative, which produces graphic art, has established Cape Dorset as an art centre of distinction and interesting prints are also produced at Povungnituk, Holman Island and Baker Lake. Soapstone sculptures from Povungnituk, Grise Fiord and Igloolik are well known and Eskimo craftsmen living at Baker Lake, Rankin Inlet, Coppermine, Resolute and Great Whale River are producing a wide range of original and attractive articles. The fishery co-operatives at George River in the Northwest Territories have found ready and profitable markets for their catches of Arctic char. Ookpik, a shaggy little sealskin owl produced by Mrs. Jeannie Snowball of the Fort Chimo Co-operative in 1963 was chosen by the Department of Trade and Commerce as the symbol for Canada Week at the Philadelphia Trade Fair. He was a sensation and received much publicity. He was registered under the trade marks and patent laws to protect Mrs. Snowball and the co-operatives, and licensing agreements with manufacturing firms in Southern Canada have created a major source of revenue for this co-operative.

#### Section 4.—Statistics of World Population

World population figures given in Table 28 are from the *United Nations Population and Vital Statistics Report* for January 1966 and, except as otherwise noted, are mid-year estimates for 1964. The area figures are from the *United Nations Statistical Yearbook 1965*.

**Estimated Population of the World by Continents.**—The following statement presents adjusted estimates of the 1964 mid-year population of the world by continental divisions. These aggregates do not coincide exactly with the sum of the figures for individual countries because they include, in addition, adjustments for over- and under-

enumeration, over-estimation, data for categories of population not regularly included in the official figures, and approximations for the countries that have not provided official 1964 data. The estimates are as follows:—

<i>Continental Division</i>	<i>Population</i>
	'000
Africa.....	304,000
North America.....	286,000
South America.....	162,000
Asia.....	1,780,000
Europe.....	443,000
Oceania.....	17,000
Union of Soviet Socialist Republics.....	228,000
WORLD TOTAL.....	3,220,000
Commonwealth countries (as at June 30, 1966).....	802,896

## 28.—Areas and Populations of the Countries or Areas of the World

NOTE.—Status of independency or dependency is as at June 30, 1966. Members of the Commonwealth and countries for which the British or Commonwealth members are responsible (June 30, 1966) are indicated with an asterisk (\*).

will be found on p. viii of this volume.*

### PART I.—IMMIGRATION AND EMIGRATION\*

#### Section 1.—Immigration Policy and Administration

**Policy.**—Traditionally, Canada has sought to increase its population through immigration in order to expand the domestic market, reduce per capita costs of administration, stimulate economic activity by providing new skills, ideas and enthusiasm, and support a higher level of cultural independence and creativity. Canadian experience indicates that a substantial volume of immigration is highly desirable.

New population cannot be added haphazardly without regard to their means of subsistence or their effect on Canadian life. Technological change and the development of Canadian society to its present complex state require that to be able to establish themselves successfully new settlers must be economically competitive in terms of education, training, skills and personal qualities. Over the years, Canada has endeavoured to acquire immigrants who were adaptable to Canadian life. Such persons, finding familiar institutions in Canada, feel more at home and this assists in their establishment in the new life they find here. Canada makes every effort to sustain the movement of immigrants from countries having like economic, social and political backgrounds. On the other hand, qualified people from other countries can integrate successfully into Canadian society and the existing immigration Regulations recognize this principle. People anywhere in the world have an opportunity to immigrate to Canada if they demonstrate their suitability for life in this country and are likely to become established without hardship to themselves or disruption to the communities in which they settle.

The core of Canada's immigration policy† is contained in the Regulations introduced with effect from Feb. 1, 1962. Those persons who are eligible to apply for permanent admission to Canada are specified. They include anyone, regardless of origin, citizenship, country of residence or religious belief, who is personally qualified by reason of education, training, skills or other special qualifications to become satisfactorily established in Canada. In practice, the personal qualifications and attributes of the applicant for admission are related to the needs and interests of Canadian society in any of its diversities—economic, social or cultural.

\* Sections 1 and 2 of this Part were revised under the direction of the Deputy Minister, Department of Manpower and Immigration, Ottawa. The history of immigration and the Immigration Act and Regulations up to the mid-1950s is dealt with in detail in a special article entitled "Developments in Canadian Immigration" appearing in the 1957-58 Year Book at pp. 154-176. Supplementing that material is an article on the "Integration of Postwar Immigrants" at pp. 176-178 of the 1959 edition.

† At the time of writing (October 1966).

Other provisions of the present Regulations enable the families of persons approved for admission under these terms to accompany them. When in Canada, a permanent resident may bring his spouse and dependent children as well as certain other close relatives to Canada. Except in some circumstances, at the time of writing, no special criteria apply in the case of these immigrants. All must be in good health and of good character and be in possession of such documentation as the Regulations prescribe. Sponsors must be able to provide adequate care and maintenance for those for whom they apply. A revision of these Regulations is proposed in the White Paper on Immigration mentioned below.

In addition, Canada has on many occasions since the end of World War II sanctioned the entry of thousands of refugees. This is a humanitarian movement and is tangible evidence of Canada's recognition of its responsibilities in the international community. A conservative estimate of the number of refugees admitted since 1945 is 300,000.

**Administration.**—The Canada Immigration Division of the Department of Manpower and Immigration administers the Immigration Act and Regulations. The White Paper on Immigration which the Prime Minister, in December 1964, announced would be prepared for presentation to Parliament was tabled in the House of Commons on Oct. 14, 1966. It provides a statement on the Federal Government's views on immigration policies and procedures in relation to national problems and national interests. It is expected that discussion of the White Paper, both in Parliament and by the public, will give rise to a consensus on the nature of changes required in immigration policy, procedures and legislation.

During 1964 and 1965, the Immigration Division was reorganized along functional lines to make its operation more consistent with its primary objective, which is to attract to Canada as many skilled persons as the economy can absorb, and to equip it to meet the challenges of the years ahead and thus give better service to immigrants and to the Canadian public. The reorganization involved more decentralization of authority, the stepping up of promotional activities overseas, the opening of new offices and the recruitment of new, highly qualified staff.

In January 1966, the Federal Government announced the proposed conversion of the Department of Citizenship and Immigration into a new Department of Manpower and Immigration. The establishment of the new Department became effective on Oct. 1, 1966 following proclamation but, at the time of writing, some administrative arrangements remained to be resolved and the planned new organizational structure for the Immigration Division must be regarded as tentative only, even though part of it became effective on Aug. 1, 1966. Under the plan, the Immigration Division will have three main Branches: (1) the *Planning Branch*, responsible for the development of the immigration program, for the evaluation and co-ordination of the factors affecting the program, and for the analysis of the results achieved; (2) the *Foreign Branch*, responsible for the selection of immigrants and for most other activities of the Division outside of Canada; and (3) the *Home Branch*, responsible for the admission and reception of, and assistance to, immigrants on their arrival in Canada, the enforcement of the Immigration Act and Regulations and the counselling of exceptional problem cases. A former, important part of the activities of the Immigration Division was the placement and settlement of immigrants in employment in Canada. This activity, along with the immigration officers who were trained specialists in the work, is being transferred to the Canada Manpower Division of the Department.

In June 1964, Mr. Joseph Sedgwick, Q.C., was asked by the Federal Government to inquire into allegations made in the House of Commons and elsewhere that certain aliens had been unlawfully detained and deprived of access to counsel and also to inquire into the general procedures being followed in relation to the arrest, deportation and prosecution of persons illegally in Canada. In April 1965, Mr. Sedgwick presented Part I of his report, dealing only with the allegations concerning detainees. In effect, the report upheld the actions of the Immigration Division in that Mr. Sedgwick found that the allegations were

ill-founded or exaggerated and that the proceedings leading to the making of orders for deportation in a majority of cases were above reproach. In a very few cases he criticized administrative delays but expressed the opinion that the fault did not arise from any intention to act in an improper manner. In February 1965, Mr. Sedgwick's terms of reference were expanded to include an examination of the extent and use of the discretionary powers which immigration legislation confers on the Minister in charge of immigration, and also an investigation of the basis and operation of the Immigration Appeal Board. The second part of Mr. Sedgwick's report was tabled in the House of Commons on Mar. 17, 1966, and the recommendations it contained were placed under study. On Oct. 20, 1966 it was agreed to establish a Special Joint Committee of the Senate and the House of Commons to examine and report upon the White Paper and Mr. Sedgwick's two reports.

On July 6, 1966, the Minister introduced a Bill in the House of Commons "to make provision for appeals to an Immigration Appeal Board in respect of certain matters relating to immigration". It is expected that the Bill will be debated by Parliament before the end of 1966.

The Minister, on July 8, 1966, announced to Parliament a new policy concerning persons who come to Canada as visitors and then attempt to remain as immigrants, thus circumventing the normal immigration channels. He set out clear and distinct criteria under which such persons already in Canada will be allowed to remain here, and separate and more exacting criteria for future visitors attempting to remain here without undergoing immigrant selection and examination procedures abroad.

At the same time the Minister announced the Government's intention to introduce changes in the immigration Regulations governing the admission of persons sponsored by relatives in Canada. The changes are to provide uniform standards for admission regardless of the immigrant's citizenship or country of residence. The changed sponsorship provisions will be made universally effective by the removal of certain security limitations on the admission of relatives from Eastern Europe and from other countries where such limitations now exist. The proposed changes are detailed in the White Paper on Immigration.

In March 1966, three amendments were made to the immigration Regulations. Two were for the purpose of eliminating delays and inconvenience caused by documentation procedures involving transportation companies. The third removed the need for permanent legal residents of the United States, who are not United States citizens, to obtain a passport from their country of citizenship in order to be admitted to Canada.

There are 33 visa offices located abroad at: London, Liverpool, Leeds, Bristol, Glasgow, Belfast, Dublin, Paris, Bordeaux, Marseille, Brussels, Berne, The Hague, Copenhagen, Cologne, Berlin, Hamburg, Munich, Stuttgart, Vienna, Oslo, Stockholm, Helsinki, Lisbon, Madrid, Rome, Milan, Athens, Cairo, Tel Aviv, New Delhi, Tokyo and Hong Kong. The Regional Immigration Headquarters for Continental Europe in Geneva is an administrative centre which does not issue visas. Four offices in the United States—at New York, Chicago, San Francisco and Denver—furnish information and counselling but do not issue visas. The possibility of opening visa offices in Birmingham and Manila is being investigated and a study has been begun to determine the feasibility of a new office in the Middle East area. Personnel at all posts are kept in close touch with economic conditions in Canada and thus are able to advise immigrants regarding their prospects for successful establishment. Examination of immigrants and visitors is carried out at 552 ports of entry on the Canadian coasts, at points along the International Boundary, at certain airports and at certain inland offices.

## Section 2.—Immigration Statistics

Table 1 shows the number of immigrants arriving in Canada in each year since 1913, the peak year of immigration into the country. Table 2 shows the number and distribution of immigrants in the population of Canada on the latest decennial census date, June 1, 1961, by period of arrival.

## 1.—Immigrant Arrivals, 1913-65

NOTE.—Figures for 1852-93 are given in the 1942 Year Book, p. 153, and for 1894-1912 in the 1948-49 edition, p. 175.

1923.....	133,729	1934.....	12,476	1945.....	22,722	1956.....	164,857		

Table 2 shows that, according to census figures, 1,507,116 persons reported that they had come to Canada between Jan. 1, 1946 and June 1, 1961. These immigrants constituted about 75 p.c. of the total number of immigrants who arrived in Canada during that period. According to the records of the Department of Manpower and Immigration, 2,033,598 persons entered Canada as immigrants during the period 1946-61. The difference between this total and the 1,507,116 postwar immigrants reported in the 1961 Census, amounting to 526,482 persons, represents the losses due to death and emigration among the postwar immigrant arrivals up to June 1961. Since this difference is arrived at by comparing statistics derived from two different sources, it must be taken as only an approximate measure of these losses. It is estimated that deaths of immigrants arriving since 1946 would not exceed 86,000 by June 1961. Hence it would appear that roughly 440,000 emigrated in the period between January 1946 and June 1961, or slightly more than one fifth of the total arrivals over this period.

The 440,000 postwar immigrants who appear to have emigrated from Canada up to June 1961 would thus constitute a little over half the total estimated emigration from Canada since 1946, according to data on emigration used in the preparation of annual population estimates. In this connection it might be mentioned that a substantial element in total Canadian emigration is the movement of Canadian-born persons to the United States, some 387,000 entering the United States as immigrants between July 1946 and July 1961 according to the United States Immigration Service records (see p. 227).

<sup>1</sup> Up to the date of the Census, June 1, 1961.

**Recent Immigration.**—The extent of immigration to Canada in any period is affected both by domestic conditions and by conditions abroad. However, these influences

are seldom immediately decisive. News of good economic conditions in Canada predisposes people in favour of this country but, because the immigration process usually takes several months, actual immigration is not always fully coincidental with the economic situation, so that immigration may at times be slight in good years but appear unduly heavy in less buoyant periods. The time-lag caused by selection, medical examination and documentation is unavoidable. Transportation is often another delaying factor and to these considerations must be added the effect of seasonal unemployment in Canada, which tends to discourage immigration during the months from November to April.

In comparison with the relatively high levels of immigration in the three years immediately following the outbreak of the Korean War in 1951, immigration dropped off slightly from 168,868 in 1953 to 154,227 in 1954. In 1954 a minor setback occurred in the Canadian economy and this resulted in a very sharp decline of some 44,000 in the 1955 immigrant intake. However, with the return of better times in North America and the deterioration of the political situation in Europe, immigration rose by 55,000 in 1956. The Hungarian revolution and the Suez crisis of 1956 had a sharp impact on Canadian immigration in 1957 when 282,164 persons were admitted, including 31,643 from Hungary and 108,989 from the British Isles. This was the largest number of immigrants to enter Canada since 1913.

The conclusion of the Suez affair and the suppression of the Hungarian revolt restored some measure of calm in Europe. Canada's economy suffered a recession in 1956 and 1957 while Europe's economic position improved, as a result of which only 124,851 immigrants came to Canada in 1958. Britain's recovery from the War and its aftermath was reflected in the fact that, for the first time in the postwar years, the British Isles group of arrivals was not the largest—persons from Italy were in first place, numbering 27,043 compared with 24,777 from the British Isles. Total arrivals dropped from 106,928 in 1959 to 104,111 in 1960 and to 71,689 in 1961 and during these years the numbers from Italy remained in first place. The main contributing factors to the decline in number of immigrant arrivals after 1958 were: (1) the upsurge in the economies of those European countries from which Canada has received the majority of its immigrants and (2) the increasing emphasis placed on selecting the immigrant who has sufficient funds and the necessary knowledge to establish himself in a business or industry of his own, as well as on the immigrant with special skills or qualifications which would permit his ready integration into the Canadian labour force.

The upward trend since 1962, when immigrants from the British Isles again headed all groups, reflects an intensification of promotional and recruitment activities in the main source countries and an expansion of immigration facilities in other areas of the world which previously have contributed few immigrants to Canada. During 1965, immigrants totalled 146,758, 30.3 p.c. more than in the previous year. There was an increase from almost every country but the major source countries were, in order: Britain, Italy, United States, Germany, France and Portugal. Immigration from the United States increased 20.5 p.c. over 1964 and was the highest in any one year since the end of the Second World War.

Ontario and Quebec continued to receive the major share of the immigrants; Ontario received 54.3 p.c., Quebec 20.7 p.c., British Columbia 12.6 p.c., the three Prairie Provinces 10.0 p.c. and the Atlantic Provinces 2.4 p.c. The total movement was divided almost equally between labour force entrants and non-workers; 74,195 were classed as workers and 72,563 as dependants or non-workers. It is also significant that of the immigrants who entered the labour force, 67 p.c. were in the 'more skilled' categories, compared with 59 p.c. in these categories in 1964.

**Analyses of Immigration in 1963-65.**—Analyses of the content of the immigration movement during the years 1963, 1964 and 1965 are given in Tables 3 to 10, and the numbers of persons deported from Canada for various reasons for the same years in Table 11.

Table 3 classifies immigrant admissions by country of last permanent residence. During the three-year period shown, 27.2 p.c. of the immigration flow came from Britain and the Republic of Ireland, 45.5 p.c. from Continental Europe, 11.2 p.c. from the United States and 16.1 p.c. from all other countries.

<sup>1</sup> Includes a few minor groups, such as German, French, Italian, etc.<sup>2</sup> Reported as Swiss origin but evidently one of the constituent races

Out of every 100 immigrants admitted to Canada during the three-year period 1963-65, 29 were British subjects, 18 were citizens of Italy, 10 of the United States, five of Germany, five of Greece, and five of Portugal; many other nationalities made up the remaining 28.

### 6.—Citizenship of Immigrant Arrivals, 1963-65

Sex distribution of recent immigrant arrivals is shown in Table 7. In the three years 1963-65, adult males comprised 35.5 p.c. of the immigrants, adult females 36.5 p.c. and children under 18 years of age the remaining 28.0 p.c. Without relation to age, 50.2 p.c. of the newcomers were females.

### 7.—Sex Distribution of Immigrants as Adult Males, Adult Females and Children, 1963-65

NOTE.—Figures from 1930 are given in the corresponding table of previous Year Books beginning with the 1946 edition.

Item	1963	1964	1965
	No.	No.	No.

<b>Totals, Immigrants.....</b>	<b>93,151</b>	<b>112,606</b>	<b>146,758</b>

The number of female immigrants coming into Canada was higher than the number of male immigrants in every year from 1957 to 1964. In 1965, however, the excess of males was 2,656, although in the age groups 15-19, 20-24 and over 50 years the number of females exceeded that of males. In the single category, males exceeded females in all age groups up to 40 years but in the married category females exceeded males by 2,409, in the widowed category by 2,794 and in the divorced or separated category by 534. Of all persons arriving in 1965 who were 15 years of age or over, 54.5 p.c. were married, 40.2 p.c. were single and 5.3 p.c. were widowed, divorced or separated.

**Destinations and Occupations.**—Upon arrival in Canada, immigrants are asked to state their intended destinations. According to these records, Ontario absorbed by far the highest proportion of arrivals in the three-year period 1963-65—53.6 p.c. of all the males and 54.4 p.c. of all the females. Quebec was the second province of destination, receiving 23.4 p.c. of the males and 21.8 p.c. of the females, followed by British Columbia with 11.0 p.c. of the males and 11.7 p.c. of the females. The proportions intending to settle in the Prairie Provinces were 9.5 p.c. and 9.7 p.c., respectively, and in the Atlantic Provinces 2.4 p.c. and 2.3 p.c., respectively. The provincial distribution has changed little from year to year throughout the whole postwar period.

In like manner, immigrant arrivals are asked to record the occupations they intend to follow in Canada. Approximately 50.6 p.c. of the persons admitted in 1965 declared that they would enter the labour force. The other 49.4 p.c. were wives, children and other dependants or were retired persons. Of the male workers, 23.7 p.c. were classed as managerial, professional and technical, 5.8 p.c. were clerical workers, 5.0 p.c. were in service occupations, 41.3 p.c. were in manufacturing, mechanical and construction trades, 12.9 p.c.

were general labourers and 4.5 p.c. were farmers. About 22.0 p.c. of the female immigrants entering the labour force were intending to follow service occupations. Details are given in Table 10.

**Deportations.**—Deportations by cause and nationality are shown in Table 11 for the years 1963-65. Persons who have not yet acquired domicile (five years of residence in Canada) may be deported if they fall into prohibited classes at time of entry or within five years of entry, if they have engaged in commercialized vice, have been convicted under the Criminal Code or have become inmates of prisons or mental institutions, or have gained entry by fraudulent means. The causes that may lead to deportation are narrowed after a person has acquired domicile. A person not a citizen may be deported regardless of length of residence if he is found to be a member of a subversive organization or engages in subversive activities, or if he has been convicted of an offence involving disloyalty to the Queen, or if he has, outside of Canada, engaged in activities detrimental to the security of Canada. A Canadian citizen cannot be deported.

### Section 3.—Emigration Statistics

Emigration from Canada is an important factor tending to offset to some extent present and past immigration activities. The major outward movement has always, of course, been to the United States and that movement, both of native-born Canadians and of Europeans who originally migrated to Canada, has attained considerable proportions at certain periods. No Canadian statistics on emigration are available but Table 12 gives figures taken from the annual reports of the Immigration and Naturalization Service of the United States Department of Justice. These figures show the numbers of persons entering the United States from Canada during the years ended June 30, 1956-65 with the expressed intention of establishing permanent residence in that country. They do not include persons travelling for pleasure, even for extended periods of time, holders of border-crossing cards (normally issued to persons living in border areas of Canada but working in the United States) or casual tourist crossings in these same areas.

Of the 38,327 Canadian-born persons entering the United States in the year ended June 30, 1965 with the intention of remaining permanently, 18,760 were males and 19,567 females. Slightly more than one quarter, or 10,595, of the total native-born emigrants were males in the productive age group, 20-59 years. By occupation, the largest group of the total of 38,327 native-born persons was the professional or technical group which numbered 4,629; clerical and kindred workers numbered 3,979, and 2,320 were classed as craftsmen or foremen. On the other hand, 20,539 persons, or 53.6 p.c. of the total, were classed as housewives, children and others with no reported occupation. Altogether, 40.9 p.c. of the total were persons under 20 years of age.

Of the 50,035 persons entering the United States from Canada claiming Canada as country of last permanent residence—which of course includes native-born persons and those born in other countries who have resided in Canada—the Immigration and Naturalization Service of the United States Department of Justice lists 6,579 as professional, technical and kindred workers, 5,200 as clerical and kindred workers and 4,039 as craftsmen, foremen and kindred workers. Housewives, children and others with no reported occupation accounted for 24,790, or 49.5 p.c. of the total.

## PART II.—CANADIAN CITIZENSHIP\*

### Section 1.—The Canadian Citizenship Act

The Canadian Citizenship Act came into force on Jan. 1, 1947, its purpose being to give a clear definition of Canadian citizenship and provide an underlying community of status for all the people of Canada. The administration of Canadian citizenship was the responsibility of the Department of Citizenship and Immigration from 1950 to Oct. 1, 1966 when, as a result of the proclamation of the Government Organization Act (SC 1966, c. 25), it was transferred to the Department of the Secretary of State.

Naturalization procedures and events leading to the passing of the Canadian Citizenship Act are given in the 1951 Year Book, pp. 153-155. The provisions of the Act and its several amendments are outlined in some detail in the 1955 Year Book, pp. 177-181. More briefly, they are given in the following paragraphs.

**Natural-Born Canadian Citizens, Born before Jan. 1, 1947.**—The Act conferred natural-born status upon two categories of persons in being on Jan. 1, 1947. These were (1) those born in Canada or on a Canadian ship or aircraft and who were not aliens on Jan. 1, 1947; and (2) those born of Canadian fathers outside of Canada who were not aliens on Jan. 1, 1947 and were either minors on that date or had already entered Canada for permanent residence.

The Act provides that a person born abroad who was a minor on Jan. 1, 1947 will automatically cease to be a Canadian citizen on his 24th birthday or on Jan. 1, 1954, whichever is the later date, unless he has his place of domicile in Canada at such date or has, before such date and after reaching the age of 21 years, filed a declaration of retention of Canadian citizenship.

**Natural-Born Canadian Citizens, Born after Dec. 31, 1946.**—A person born outside of Canada subsequent to that date, whose responsible parent is considered a Canadian citizen pursuant to the terms of the Canadian Citizenship Act, is a Canadian if his birth is registered with the Registrar of Canadian Citizenship within two years of its occurrence or within such extended period as the Minister may authorize in special cases.

A person who becomes a natural-born Canadian citizen in such a manner will automatically cease to be a Canadian citizen if he fails to file a declaration of retention prior to his 24th birthday or does not have his place of domicile in Canada upon that date.

**Canadian Citizens other than Natural-Born.**—Before the 1953 amendments to the Citizenship Act, the only persons who acquired Canadian citizenship on Jan. 1, 1947 through the transitional clauses of Sect. 9 were persons who were naturalized in Canada before that date, British subjects who had Canadian domicile at the commencement of the Act and women lawfully admitted to Canada and married prior to Jan. 1, 1947 whose husbands would have qualified as Canadian citizens if the Act had come into force before the date of marriage. Sect. 9 was amended on June 1, 1953, so that a British subject who had his place of domicile in Canada for at least 20 years immediately before Jan. 1, 1947 need not comply with the requirements of Canadian domicile provided he was not under an order of deportation on Jan. 1, 1947.

**Acquisition of Canadian Citizenship by Aliens and British Subjects.**—The Act provides a means of acquiring Canadian citizenship. An alien who wishes to become a Canadian citizen must apply through his local court or through one of the special citizenship courts now established. He must appear before the judge for a hearing and will in due course be granted citizenship if his application is approved by the judge and by the Minister. A British subject may apply for citizenship directly to the Minister. It should be added that a minor child does not automatically acquire Canadian citizenship upon the grant of citizenship to the responsible parent.

\* Prepared in the Citizenship Registration Branch under the direction of the Under Secretary of State, Ottawa.

**Status of Married Women.**—The Canadian Citizenship Act places no disabilities upon the married woman. She neither acquires nor does she lose Canadian citizenship by marriage. In order to acquire Canadian citizenship she must apply in exactly the same manner as does a man. There is, however, one advantage granted to her—if she is married to a Canadian citizen she may apply for citizenship after a residence of only one year in Canada.

The Canadian Citizenship Act also enables a woman married to an alien whose nationality she acquired upon marriage to divest herself of Canadian citizenship by the filing of a declaration of renunciation. Finally, it provides a means whereby a woman, who had become an alien through marriage prior to Jan. 1, 1947, may acquire the Canadian status she would otherwise have assumed on that date.

**Status of Minor Children.**—The minor child of a Canadian citizen other than a natural-born Canadian may receive a certificate of Canadian citizenship upon application therefor by his or her responsible parent, *de facto* guardian, or mother if she has custody of the child. Provision is also made in the Citizenship Act for the granting of a certificate of citizenship to a minor child in special circumstances.

**Loss of Canadian Citizenship.**—Canadian citizenship may be lost in the following manner:—

- (1) A Canadian citizen who when outside of Canada and not under disability acquires by a voluntary and formal act other than marriage the nationality or citizenship of a country other than Canada. This does not apply if the country is at war with Canada at the time of acquisition but in such a case the Minister may order that he cease to be a Canadian citizen. The purpose of this is to hold the person, if deemed necessary, to his obligations as a Canadian.
- (2) A natural-born Canadian citizen who is a dual national by birth or through naturalization, and any Canadian citizen on marriage, may after attaining the age of 21 cease to be a Canadian citizen through the making of a declaration of renunciation thereof.
- (3) A Canadian citizen who under the law of another country is a national or citizen of such country and who serves in the armed forces of such country when it is at war with Canada. This does not apply if the Canadian citizen became a national or citizen of such country when it was at war with Canada.
- (4) An other-than-natural-born Canadian citizen, unless he served outside Canada in the Armed Forces of Canada in time of war or other related circumstances, or unless otherwise exempt, loses his citizenship automatically if he has resided outside of Canada for ten consecutive years. The period of absence may, however, be extended upon request if the application is filed and granted before loss occurs and if good and sufficient reason exists.

**Loss of Citizenship by Revocation—Applicable Only to Naturalized Persons.**—In 1958 the Canadian Citizenship Act was amended and limited the provisions regarding loss of Canadian citizenship to the following: the citizenship of a Canadian citizen other than a natural-born Canadian citizen may be revoked by the Governor in Council if, upon a report from the Minister, he is satisfied that such Canadian citizen, having been charged with the offence of treason under the Criminal Code or with an offence under the Official Secrets Act, has failed or refused to return to Canada voluntarily within such time as may be prescribed in a notice sent by the Minister to such person at his last known address and has not appeared at the preliminary inquiry into such offence or at the trial of such offence, or both as the case may be; or has obtained a certificate of naturalization or of Canadian citizenship by false representation or fraud or by concealment of material circumstances.

**Doubt as to Loss of Citizenship.**—Where in the opinion of the Minister a doubt exists as to whether a person has ceased to be a Canadian citizen, the Minister may refer the question to the Commission referred to in Subsection (4) of Section 19 for a ruling and the decision of the Commission or the Court, as the case may be, shall be final.

**Loss of Citizenship by Revocation—Applicable to Both Natural-Born and Naturalized Persons.**—The Governor in Council may in his discretion order that any person shall cease

to be a Canadian citizen if, upon a report from the Minister in charge of immigration, he is satisfied that such person has, when not under a disability (1) acquired voluntarily, when in Canada, the citizenship of a foreign country (other than by marriage), (2) taken or made an oath, affirmation, or other declaration of allegiance to a foreign country, or (3) made a declaration renouncing his Canadian citizenship.

## Section 2.—Canadian Citizenship Statistics

According to the 1961 Census, which required that each person state the country to which he owed allegiance and had citizenship rights as at June 1, 1961, less than 6 p.c. of Canada's population reported a country of citizenship other than Canada. Table 1 shows the citizenship of the population by province.

### 1.—Citizenship of the Population, by Province, Census 1961

<sup>1</sup> Represents only those cases reported to the Citizenship Branch by posts abroad.

**Characteristics of Persons Granted Citizenship Certificates in 1965.**—Comparable detailed statistics showing the characteristics of persons granted citizenship certificates are available since 1953; such characteristics include age, marital status, occupation, period of immigration, residence and previous nationality. The number of applicants fluctuates from year to year but it is known that about 40 p.c. of the immigrants who entered Canada during the past ten years who are eligible for Canadian citizenship have become Canadians.

Of the 63,844 persons granted citizenship in 1965, fewer than 1 p.c. had immigrated to Canada before 1921, 2 p.c. in the period 1921-40, 7 p.c. in the period 1941-50 and 91 p.c. after 1950. Regionally, these new citizens were distributed as follows: 2 p.c. in the Atlantic Provinces, 18 p.c. in Quebec, 54 p.c. in Ontario, 14 p.c. in the Prairie Provinces and 12 p.c. in British Columbia. Almost 87 p.c. of them resided in urban centres.

About 18 p.c. of the persons naturalized in 1965 previously owed allegiance to a British Commonwealth country, 17 p.c. were former citizens of Italy, 13 p.c. of Germany, 9 p.c. of the Netherlands, 5 p.c. of Hungary, 5 p.c. of Greece and 5 p.c. of Yugoslavia. Most of the persons designated as "stateless" were born in Poland, the U.S.S.R., Yugoslavia, Hungary, Germany, Czechoslovakia and Romania.

Among the males in the labour force naturalized in 1965, craftsmen, production process and related workers occupations were reported by 44 p.c., 12 p.c. were in service and recreation occupations, 12 p.c. were in professional and technical occupations, labourers accounted for 8 p.c., managerial occupations for 6 p.c., clerical workers for 4 p.c. and farmers and farm workers for 4 p.c. each. Of the females, 46 p.c. were homemakers and, among those employed outside the home, 31 p.c. were in the craftsmen, production process and related workers occupations group, 26 p.c. were in service and recreation occupations and 24 p.c. were in clerical occupations.

The Canadian population, although basically made up of British Isles and French ethnic groups, is a mosaic of people whose forbears or who themselves have come from many lands. More than 42 p.c. of them are under 20 years of age.

*The interpretation of the symbols used in the tables throughout the Year Book will be found on p. viii of this volume.*

Vital statistics provide a key to the interpretation of population development—a measure of the pace at which it is growing, the rate at which women are marrying and reproducing, and the effect this has on the age and sex distribution of the population, as well as the relative importance of the diseases that cause death each year. Vital statistics constitute the record of births, deaths, marriages and divorces registered in the provinces and territories of Canada. The continuity of such data gives a constant guide to the planning, operation and evaluation of many national activities, particularly in the fields of public health, education, community planning and various types of business enterprise.

This Chapter gives a fairly detailed coverage of the vital statistics information available, gives life tables for males and females and presents a comparison of the principal Canadian vital statistics rates with those of other countries. In making international and interprovincial comparisons of birth, death and marriage rates, it is important to note that part of the differences observed over a period of years as between countries, provinces or local areas may be caused by differences in the sex and age distribution of the populations involved. Similarly, rates for any one area may be affected by changes in such distribution. The population data upon which vital statistics rates are computed are given in Chapter III of this volume. Births and deaths are classified by place of residence (births according to the residence of the mother) and marriages by place of occurrence.

The history of the collection of vital statistics in Canada is covered in the 1948-49 Year Book, pp. 185-188. Detailed information is given in *Vital Statistics* (Preliminary Report) (Catalogue No. 84-201), *Vital Statistics of Canada* (Catalogue No. 84-202) and in other regular and special reports; in addition, certain unpublished data are available on request.

### Section 1.—Summary of Vital Statistics

Table 1 gives a summary for reference purposes of the principal vital statistics of the provinces and territories of Canada for five-year periods 1941-60 and for single years 1962-64. Table 2 shows similar data for urban centres having at least 20,000 population at the date of the 1961 Census for the year 1964 with comparative averages for 1956-60.

\* Revised in the Vital Statistics Section, Health and Welfare Division, Dominion Bureau of Statistics.

## 1.—Summary of Principal Vital Statistics, by Province, 1941-64

NOTE.—Figures from 1921, when the collection of national statistics was initiated, are given in previous editions of the Year Book. Figures for neonatal mortality (within the first four weeks of birth) are given on p. 262 and those for divorces on p. 271.

<sup>1</sup> Excess of births over deaths.<sup>2</sup> Deaths under one year of age; deaths within the first four weeks of<sup>3</sup> Per 1,000 population.<sup>4</sup> Per 1,000 live births.<sup>5</sup> Per 10,000 live births.

birth are given on p. 262.

<sup>6</sup> Figures for Newfoundland are included from 1949.

## 2.—Summary of Principal Vital Statistics for Incorporated Urban Centres of 20,000 Population or Over,<sup>1</sup> 1964 with Average for 1956-60

NOTE.—Birth, death and natural increase rates cannot be computed for 1964 or the period 1956-60 since urban centre populations are not known for intercensal periods. Urban centres are designated in this table by the following abbreviations: c.=city, t.=town, vl.=village and d.m.=district municipality.

Province and Urban Centre	Live Births		Deaths		Natural Increase <sup>2</sup>	Infant Mortality <sup>3</sup>		Neonatal Mortality <sup>4</sup>		Marriages <sup>5</sup>

<sup>1</sup> As at the date of the 1961 Census; residents only.

<sup>2</sup> Excess of births over deaths.

<sup>3</sup> Deaths under one year of age.

<sup>4</sup> Deaths under 28 days.

<sup>5</sup> By place of occurrence.

<sup>6</sup> Per 1,000 live births.

<sup>7</sup> Population fewer than 20,000 at date of 1961 Census but included as the largest urban centre in Prince Edward Island.

## VITAL STATISTICS RATES, 1925-64

## Section 2.—Births\*

No accurate figures on Canadian crude† birth rates are available prior to 1921, when the annual collection of official national figures was initiated. However, the following rough estimates of the average annual crude rates for each ten-year intercensal period between 1851 and 1921 may be inferred from studies of early Canadian census data:—

Intercensal Period	Estimated Average Annual Crude Birth Rate (per 1,000 Population)
-----------------------	---

1851-61.....	45
1861-71.....	40
1871-81.....	37
1881-91.....	34

Intercensal Period	Estimated Average Annual Crude Birth Rate (per 1,000 Population)
-----------------------	---

1891-1901.....	30
1901-11.....	31
1911-21.....	29

\* Unless otherwise indicated, "births" in this Section refer to infants born alive; stillbirths are dealt with under a separate heading on p. 249 and under multiple births on p. 244. For international comparisons, see Section 7, pp. 275-276.

† A crude rate is one based on the total population.

The general trend in the national birth rate since 1925 is shown in the chart on p. 241 and since 1941 in Table 1. The annual rates declined gradually but steadily from 29.3 in 1921 to a record low of 20.1 in 1937, recovered sharply in the late 1930's and during World War II to 24.3 in 1945, and in the two years following the War rose to a postwar high of 28.9 in 1947. Between 1948 and 1959 the rate remained remarkably stable at between 27.1 and 28.5 but has since been declining and in 1964 reached a postwar low of 23.5. Part of this decline is attributable to the fact that the crude birth rate is based on *total* population, which now includes larger proportions of 'non-productive' population, as well as to the fact that the large, immediate postwar cohorts of married women are now approaching the end of their reproductive periods and have completed their families. Further, even if the annual number of births were to remain stable at 450,000 to 500,000—as it has for the past five to ten years—the net effect of an increase in population is a declining crude birth rate.

The rates in most provinces followed trends very similar to the national trend but showed some regional differences in recent years. Although all provinces had record high rates immediately following World War II, average birth rates in Ontario and the western provinces were higher during the 1951-55 period than during 1946-50 and those for Quebec and the Maritimes were lower than during 1946-50. In fact, Ontario, Alberta and British Columbia had record high crude birth rates during the 1956-59 period. However, most of the provinces recorded their lowest postwar rate in 1964.

It is often erroneously assumed that the Province of Quebec has not only the largest number of births annually but the highest birth rate in Canada. Since the late 1930s or early 1940s Newfoundland, in some years New Brunswick and, since 1953, Alberta have had higher birth rates than Quebec. Table 1, pp. 236-237, shows that six provinces—Newfoundland, Prince Edward Island, Alberta, New Brunswick, Saskatchewan and Nova Scotia, in that order, had higher crude rates than Quebec in 1964, followed by Ontario, Manitoba and British Columbia. However, since these crude rates are based on the *total* population they do not reflect the fertility of the women of reproductive ages in the different provinces or the number married within these reproductive ages. A more accurate measure of the true birth rate is one based on the number of married women between the ages of 15 and 45 (see pp. 245-246).

Also contrary to popular impression, since 1953 more babies were born each year in Ontario than in the Province of Quebec; in 1964, 152,729 babies were born to Ontario mothers as compared with 130,845 to Quebec mothers. Altogether, 452,915 children were born alive in Canada in 1964, 26,360 fewer than the record 479,275 born in 1959 and 12,852 fewer than the number born during 1963.

**Sex of Live Births.**—With rare exceptions, wherever birth statistics have been collected they have shown an excess of male over female births. No conclusive explanation of this excess has yet been given. Nevertheless it is so much an accepted statistical fact that a proper ratio of male to female births has become one of the criteria of complete registration. The number of males to every 1,000 females born in Canada has averaged around 1,057 since the middle 1930s. Provincial sex ratios vary much more widely because of the relatively small number of births involved—the smaller the total number of births, the greater the chance of wide sex-ratio variations from year to year. Another commonly acknowledged fact in many countries—although there is no generally accepted explanation for it—is that the male ratio appears to rise during or shortly after major wars. This seems to have happened in Canada between 1942 and 1945 when the ratio rose to an average of 1,064 during these four years as compared with averages of 1,054 between 1931-41 and 1,057 since 1946. In 1964, 1,056 male infants were born for every 1,000 females.

## 3.—Sex Ratios of Live Births, 1941-64

NOTE.—Figures for Newfoundland are included from 1949 and those for the Yukon and Northwest Territories from 1950.

Year	Males	Females	Males to 1,000 Females	Year	Males	Females	Males to 1,000 Females

1957.....	241,073	228,020	1,057				

**Hospitalized Births.**—In 1964 over 98 p.c. of all Canadian births occurred in hospital as compared with 88 p.c. eight years previously. Table 4 shows the rise in hospitalized births in each province since 1941. Before the initiation in 1958 of the federal-provincial hospital insurance programs—in which all provinces were participating by 1961—there were rather wide variations among the provinces in percentages of hospitalized births. Such variations were caused by the existence of prepaid or provincially sponsored hospital, maternity or medical care plans in some provinces, the unavailability of hospital facilities in others—particularly in remote rural areas—and preference for home delivery in some local areas. Although some variation still exists, the operation of the hospital insurance program has probably been responsible for the noticeable increases in hospitalized births in provinces that previously had lower proportions, for example in New Brunswick where the hospital insurance plan was put into effect on July 1, 1959, and in Quebec where the plan went into effect in 1961.

<sup>1</sup> Excludes Newfoundland for which data are not available.

**Births in Urban Centres.**—Table 2, pp. 238-240, shows the number of births in 1964, as compared with the average for 1956-60, to mothers residing in each urban centre of 20,000 population or over. Because the populations of urban centres are not known for intercensal years, birth rates cannot be computed for the 1956-60 period or for 1962-64.

**Illegitimacy.\***—In 1964, nearly 6 p.c. of the live births in Canada were illegitimate. This percentage is low compared with that of many countries of the world but has been rising recently, as shown in Table 5.

<sup>1</sup> Figures for Newfoundland are included from 1949, and those for the Yukon and Northwest Territories from 1951.

**Multiple Births.**—Approximately one confinement in 90 in Canada results in the birth of more than one child as compared with one in 85 several years ago—in other words, the chances of a confinement resulting in the birth of more than one child are fewer now than formerly. The chance of a mother delivering twins is about one in 90, triplets, one in about 10,000 and quadruplets, one in about 750,000 or more. Two sets of quadruplets were born in Canada during 1960—the first since 1957—and one set in each of 1962, 1963 and 1964. In 1964 a total of 453,614 mothers bore a total of 458,464 infants, of which 452,915, or almost 99 out of every 100, were born alive.

Other facts illustrated by Table 6 are that the proportion of stillbirths is higher among multiple than among single births, about twice as high for twins and between three and five times as high for triplets.

\* The term "illegitimate", as used here, does not refer to all births conceived out of wedlock but is necessarily restricted to those in which parents reported themselves as not having been married to each other at the time of birth or registration and, in Ontario, to those in which the marital status of the mother was reported as "single" at the time of birth or registration.

<sup>3</sup> Includes 45 stillbirths of 20-27 weeks gestation.

<sup>4</sup> Includes 29 stillbirths of 20-27 weeks gestation.

**Fertility Rates.**—The sex and age composition of a population is obviously an important factor in determining crude birth, marriage and death rates. Since almost all children born each year are to women between the ages of 15 and 45, variations in the proportion of women of these ages to the total population will cause variations in the crude birth rate of different countries—or of different regions within a country—even though the actual rates of reproduction or *fertility* of the women in these age groups in each country or region are identical.

A more accurate measure of the fertility of a population would be one based on the number of women of reproductive age, that is those 'able' to bear children, and a still more accurate measure would be one based on the number within this group that are married, that is those 'eligible', as it were, to bear children. Each type of rate has its uses, depending on the comparisons required. The two types—generally referred to as *crude fertility rates*—are compared in Table 7, and indicate the variations in each type as between provinces and the provincial trends over the years 1962-64.

The number of infants born in relation to every 1,000 women in the population between the ages of 15 and 45 has been declining for the past few years, dropping from 124 in 1962 to 115 in 1964. However, the rates varied among the provinces from 104 to 171 during the past three years; in 1964 Newfoundland, Prince Edward Island, Saskatchewan, New Brunswick, Alberta and Nova Scotia had the highest rates and British Columbia, Quebec, Ontario and Manitoba, in that order, the lowest. On the other hand, the average annual

number of infants born to every 1,000 *married* women in the country as a whole dropped from 176 to 165 during the same period. According to this measure, the five eastern provinces and Saskatchewan had, on the whole, the highest rates.

### 7.—Crude Fertility Rates, by Province, 1962-64

<sup>1</sup> Since the number of births to women over 44 is quite small, rates are here restricted to women under 45.

<sup>2</sup> Excludes the Yukon and Northwest Territories.

The rates shown in Table 7 are *crude* in the sense that they do not take into account differences in fertility in the component age periods within the female reproductive life span, nor the proportions of married women in each age period. It is therefore conventional practice to calculate what are termed *age-specific fertility rates*, i.e., the number of infants born annually to every 1,000 women in *each* of the reproductive age periods, again either for all women or for those who are married. Table 8 provides these two sets of rates—the former for 1941, 1951 and 1956-64 and the latter for 1962-64 in addition to the census years from 1941 to 1961.

Another measure of fertility in a country is obtainable from what is conventionally referred to as a *gross reproduction rate*. The gross reproduction rates shown in Table 8 indicate the average number of female children born each year to each woman living through the child-bearing ages. In other words, this figure represents the average number of females that *would* be born to each woman who lived to age 50 *if* the fertility rate of the given year remained unchanged during the whole of her child-bearing period. A gross reproduction rate of 1.000 indicates that, on the basis of current fertility and without making any allowance for mortality among mothers during their child-bearing years, the present generation of child-bearing women would exactly maintain itself. Canada has always had one of the highest gross reproduction rates among the industrialized countries of the world. Even during the period of low birth rates in the 1930s the rate varied between 1.300 and 1.500 and since World War II has ranged from 1.640 to a record high of 1.915 in 1959; in 1964 the rate stood at 1.720, still 72 p.c. more than the number required for the population to replace itself. With minor exceptions, provincial reproduction rates are also well above the replacement level.

Table 8 indicates that in 1964, considering all women whether married or not, women in their 20s were the most reproductive, as might be expected; on the average, for every 1,000 women between the ages of 20 and 25, 216 infants were born during that year or, expressed another way, about one woman out of four in that age group gave birth to a live-born infant. This compares with a rate of 206 for women in the age group 25-29, which is closer to one in five. However, among *married* women, teen-age mothers have consistently had the highest fertility, with one out of two bearing a child each year on the average, while about 34 out of every 100 married women in their early 20s had a child every year as compared with about one in four women in their late 20s.

#### 8.—Age-Specific Fertility Rates per 1,000 Women, by Age Group, 1941-64

(Exclusive of Newfoundland for all years and the Yukon and Northwest Territories for 1941)

**Age of Parents.**—Age of parents is an important variable in any analysis of birth statistics. The distribution of legitimate and illegitimate live births by age of the parents is given in Table 9.

Over 7 p.c. of the legitimate children born in 1964 were born to mothers under 20 years of age, in over one third of the births the mother was under 25 years, and in two thirds, under 30 years; in almost one fifth of the births the father was under 25 years of age, and in over 49 p.c. of all births the father was under 30 years. On the other hand, almost 38 p.c. of the illegitimate infants born were born to mothers under 20 years of age and an additional 34 p.c. to mothers under 25 years. The average age of all the married mothers to whom a child was born in 1964 was 27.9, and of the fathers 31.1 years; ten years ago the average ages of the parents were 28.4 and 31.9, and thirty years ago 29.3 and 33.7, respectively.

The median age of unmarried mothers who bore a live-born child in 1964 was 21.2; that is, half of the mothers of the 25,803 'illegitimate' children delivered in 1964 were under 21.3 years of age.

**Order of Birth.**—Table 10 shows the order of birth of all live-born infants in 1964 according to the age of the mother. As would be expected, 30,710, or three fourths of the 40,567 infants born to mothers under 20 years of age, were the first live-born child, whereas almost six out of every ten of the children born to mothers of 20-24 years were their second or later live-born child. In 1964, 209 infants were born to mothers who had not yet reached their 15th birthday.

**Birthweight.**—Excluding Newfoundland, information on birthweight of newborn infants has recently become available from provincial records of birth. These data, in addition to their usefulness in calculating the average weights of newborn infants, are of importance from the public health and medical points of view in throwing light on the number of immaturely developed foetuses that are delivered alive. According to criteria recommended by the World Health Organization, infants of 5 lb. or less at birth are considered 'immature' and hence exposed to a much greater risk of dying than those over this weight. Weight at birth depends on a host of maternal factors, most of which are not included in the birth records, but some information is available on the age of the mother and length of pregnancy before delivery.\* Analysis of this information shows that (1) there are variations in average weight according to the age of the mother, (2) women under 20 and over 35 tend to produce higher proportions of immature infants, so that the late 20s and early 30s would appear to be the ideal ages for motherhood, and (3) almost all infants of less than 28 weeks gestation are delivered 'immature' according to the definition. The average single male infant born at full term weighs about 7½ lb. at birth and the average female about 4 oz. less.

**Stillbirths.**†—The 5,520 stillbirths of at least 28 weeks gestation that were delivered in 1964 represented a ratio of 12.2 for every 1,000 foetuses born alive. As is evident from Table 12, the stillbirth rate has been decreasing steadily and has been cut by more than half over the past quarter-century. Although the variations between provincial rates have never been wide, rates in some provinces have been reduced more than in others. The stillbirth rate among unmarried mothers has been consistently higher than that among married mothers but the difference is narrowing.

\* Obtainable from the Vital Statistics Section, DBS.

† Stillbirth figures given here refer only to foetuses of 28 or more weeks gestation which "showed no sign of life". Up to the end of 1963, only foetuses delivered after at least 28 weeks pregnancy which showed no sign of life were required to be registered with the provincial authorities; as of Jan. 1, 1964, all provinces (except Newfoundland) provide for the compulsory registration of all stillbirths of 20 or more weeks gestation, a 'stillbirth' being defined as "the complete expulsion or extraction from its mother, after at least 20 weeks pregnancy, of a product of conception in which, after such expulsion or extraction, there is no breathing, beating of the heart, pulsation of the umbilical cord, or unmistakable movement of voluntary muscle". Available data for stillbirths of 20-27 weeks pregnancy are not shown here but are obtainable from the Vital Statistics Section, DBS.

<sup>1</sup> Exclusive of Newfoundland for all years and the Yukon and Northwest Territories for 1941-50. for Newfoundland are included from 1949.

<sup>2</sup> Figures

Table 13 illustrates the fact that the risk of having a stillborn child increases with the age of the mother. Although stillbirth rates for mothers of all ages have been declining, they continue to be three to four times as high for mothers over 40 years of age as for mothers under 30. The average age of mothers who bore stillborn children in 1964 was 29.9 years; the median age was 29.3. The average age of mothers who bore legitimate live-born children was 27.9 and of those who bore illegitimate live-born offspring was 23.4. Causes of stillbirths in 1964 are shown in Table 14.

## Section 3.—Deaths\*

No official crude† death rates are available prior to 1921, but some indication of these may be obtained from studies of the early censuses as follows:—

<i>Intercensal Period</i>	<i>Estimated Average Annual Crude Death Rate (per 1,000 Population)</i>	<i>Intercensal Period</i>	<i>Estimated Average Annual Crude Death Rate (per 1,000 Population)</i>
1851-61.....	22	1891-1901.....	16
1861-71.....	21	1901-11.....	13
1871-81.....	19	1911-21.....	13
1881-91.....	18		

As is typical of pioneer populations, Canada had a high death rate in the mid-1850s when the country was still in the throes of pioneer settlement. The crude death rate during that period is estimated as between 22 and 25. Although no data are available, it is assumed that, while mortality at all ages was high, the rate among infants, children and young adults must have been particularly so since even in the 1920s mortality in these ages was still quite high. With the gradual increase in population density and in urbanization and improved sanitation and medical services, the crude rate was halved during the 80 years between 1851 and 1930, dropping from about 22 to 11. It declined steadily to slightly over 8 in the late 1950s and dropped to a low of 7.6 in 1964. This is one of the lowest crude death rates in the world.

Table 1, pp. 236-237, shows the trends since 1941 in the provinces and territories. The generally low rates in the Prairie Provinces are partly the result of their younger average population; the uniformly higher rate in British Columbia is attributable mainly to a high proportion of people in the older age groups.

## Subsection 1.—General Mortality

**Age and Sex Distribution of Deaths.**—During the period of national vital statistics (1921 to date), the mortality pattern at all ages has been steeply downward. Of major significance in lowering the over-all death rate were the reductions in infant mortality, in childhood death rates and in those of young adults. In 1931, over 19 p.c. of all male deaths occurred among persons of five to 45 years of age; in 1964 only a little over 10 p.c. took place in this age group. Among females in the same age group the proportion dropped from just under 22 p.c. to 7.4 p.c.

\* For international comparisons, see Section 7, pp. 275-276.

† A crude rate is one based on the total population.

Tables 15 and 16 illustrate the very large reductions in death rates that have taken place since 1931 in each age group of the population. By far the greatest reductions have been among the young of both sexes. However, even though the rates for females at every age have always been consistently lower than those for males, female death rates have been declining faster and the differences are gradually widening. Between 1931 and 1964 the rates for all females dropped by 34 p.c. as compared with only 16 p.c. for males.

15.—Percentage Change in Death Rates for Each Age Group, 1931 to 1964

Age Group	Males	Females	Age Group	Males	Females
Under 1 year.....	-70.6	-71.2	50-54 years.....	-11.2	-43.3

45-49 ".....	-20.8	-51.5			
			All Ages.....	-16.2	-34.4

Despite the very considerable reduction that has taken place in infant mortality, more deaths still occur in the first year of life than in any other single year. Of the total deaths occurring in 1931, almost one quarter were of children under five years of age and more than three quarters of those were of children under one year of age; of the deaths occurring in 1964, almost 9 p.c. were of children under five years and of those about 86 p.c. were under one year. Most of the reduction took place among children over the age of one month but there was also a notable decrease in all childhood ages up to five years.

The reductions in the mortality rates in early and middle years of life have had the effect of increasing the number of people in the older age groups and raising the average age at death. In 1931 the average age at death of males was 43.1 years and of females 44.8 years; by 1964 this had advanced to 60.8 years and 64.5 years, respectively. On the other hand, the median age increased during the same period from 50.8 to 68.1 for males, and from 52.1 to 72.9 for females. This means that *half* of all the females who died during 1964 were over 73 years of age, while for males half had reached 68 years. Since 1931 the gains in median age were 17.3 years for males and 20.8 for females.

<sup>1</sup> Excludes the Yukon and Northwest Territories.

<sup>2</sup> The age above and below which half of the total number of annual deaths occurred.

Table 17 indicates the variations from province to province in average and median ages at death; these, in turn, are dependent in large measure on the age distribution of the population as well as on varying mortality rates at each age. For example, in Newfoundland a high mortality rate among infants and young children reduces the average and median age for that province, but the reverse is the case in British Columbia and several other provinces with older populations.

## 17.—Average and Median Ages at Death, by Sex and Province, 1964

<b>Canada.....</b>	<b>60.8</b>	<b>64.5</b>	<b>68.1</b>	<b>72.9</b>

<sup>1</sup> The age above and below which half of the total number of annual deaths occurred.

**Deaths in Urban Centres.**—Table 2, pp. 238-240, shows the numbers of deaths in urban centres of 20,000 population or over in 1964 and the average numbers for the period 1956-60; death rates for urban centres cannot be computed for these years since their populations are not known for intercensal periods.

**Causes of Death.**—Table 18 summarizes the most recent figures for deaths and death rates in Canada grouped according to the International Abbreviated List of 50 Causes. Over 80 p.c. of the deaths are caused by diseases of the heart and arteries, cancer, accidents, diseases of early infancy, the respiratory diseases, and nephritis. Because of the rise in the average age at death during the past thirty years, the proportion of deaths from causes that affect older people has increased. Cancer and diseases of the cardiovascular-renal systems now account for a larger proportion of all deaths. By the same token, deaths from causes that mainly affect children and young adults have declined.

<sup>1</sup> Per 100,000 males.<sup>2</sup> Per 100,000 live births.

Accidents have displaced infectious diseases in recent years as one of the major killers. Table 19 shows clearly that accidents are, by far, the leading cause of death among males from age 1 to 45 and one of the five major causes above that age. Although less predominant among females, accidents are also one of the leading causes of female death beyond the first year of life.

Subsection 2.—Infant Mortality

Table 1, pp. 236-237, and Table 20 show the striking improvement that has taken place in the rate of infant mortality during the past twenty years. Although 62,397 of the 2,342,626 children born in the five years 1960-64 died before reaching their first birthday, 157,576 others lived who *would have died* at the infant mortality rate prevailing in the period 1926-30. This improvement is attributable to many factors—the higher proportion of births taking place in hospital or under proper prenatal and postnatal care, better supervision of water supplies, improved sanitation, pasteurization of milk, the use of antibiotics, improved home environment as a result of higher living standards and, in recent years, the generally lower age of mothers.

The variations that exist in infant mortality rates from province to province and from one locality to another may be explained by differences in the extent to which these factors apply provincially or locally. Among the provinces, the 1964 male infant mortality rates ranged from a low of 24 to a high of 35, compared with the national average of 28—the latter including the very high rate among the Northwest Territories aboriginal population. Female rates ranged from 17 to 27, compared with the national rate of 21. While the national and provincial rates for both sexes have been declining steadily for some years, for some unknown reason there were recently a number of reversals in provincial rates.

Table 20 shows that mortality among male infants is 25 p.c. to 30 p.c. higher than that among female infants for Canada, with wider variations for the individual provinces. For the country as a whole, out of every 1,000 infant boys born alive in 1964, 28 died before reaching their first birthday, whereas out of every 1,000 infant girls born alive, 21 died within one year. As already pointed out, there are on the average 1,057 males born to every 1,000 females but, because male infant mortality is higher, the excess of males is reduced greatly by the end of the first year. For example, in 1961-64 there were 956,795 male children born compared with 907,280 female children, an excess of 49,515 or 5.5 p.c.; in the same period, 28,371 male children died during their first year compared with 20,949 female children so that the excess of males at one year of age was reduced to 42,093 or 4.7 p.c.

## CAUSES OF INFANT AND NEONATAL DEATHS, 1964

(PERCENTAGES OF TOTAL INFANT AND TOTAL NEONATAL DEATHS)

**Infant Mortality in Urban Centres.**—Because of the relatively small numbers of infant deaths in individual cities and towns, the rates for these centres usually vary widely from year to year. As is evident from Table 2, pp. 238-240, many cities and towns have maintained consistently low rates as compared with the national rate or the rate for the province in which they are situated.

**Causes of Infant Deaths.**—In 1964 almost 70 p.c. of the infant deaths were caused by immaturity, congenital malformations, pneumonia, postnatal asphyxia and atelectasis, and injury at birth. Immaturity was the underlying cause of 2,159 and was an added complication in 2,828 others. Congenital malformations accounted for 1,969 fatalities, pneumonia for 1,255, postnatal asphyxia for 1,256 and injury at birth for 1,170. Rates for all these causes decreased in 1964.

*Neonatal Mortality.*—Deaths occurring within the first four weeks of birth are conventionally referred to as 'neonatal' deaths. Table 22 shows that about 70 p.c. of all infant deaths occur in this hazardous neonatal period and, as would be expected, are caused mainly by conditions associated with pregnancy or delivery. Table 23 gives numbers and rates of neonatal deaths for 1941-64 and the chart on p. 260 compares the major causes of such deaths with all infant deaths from the same causes.

<sup>1</sup> Prior to 1951, includes deaths under one calendar month of age; since 1951, includes deaths under 28 days.

*Perinatal Mortality.*—'Perinatal' mortality—the combined total of stillbirths and deaths of live-born infants occurring 'around' the natal period—is a relatively new vital statistics concept. Since such deaths frequently have the same underlying causes, associated with pregnancy or delivery, regardless of whether they occur before or after delivery, perinatal deaths are generally considered as including the combined total of stillbirths occurring after at least 28 weeks pregnancy and deaths of live-born infants who fail to survive the first week of life.

In 1964 there were 12,539 such 'deaths', of which 5,520 were stillborn and 7,019 live-born but failed to survive one week, with a national rate of 27.4 such deaths for every 1,000 total deliveries. This perinatal rate has declined slowly but steadily from 65.2 in 1921 to 27.4 in 1964.

### Subsection 3.—Maternal Mortality

As indicated in Table 1, pp. 236-237, the number of mothers who die in pregnancy and childbirth has been greatly reduced during the past two decades, reaching an all-time low of 137 in 1964. Since 1951 the rate of maternal mortality per 10,000 births has been under 10 and since 1959 it has been under five. Despite this improvement, Canada's maternal death rate (3.0 in 1964) is higher than those for several other countries (see p. 276). Mortality among unmarried mothers is higher than among married mothers.

*Causes of Maternal Deaths.*—Table 24 shows the main causes of maternal deaths during the years 1962-64.

24.—Maternal Mortality and Rates per 100,000 Live Births, by Cause, 1962-64

Of the 137 maternal deaths in the latest year, 35 resulted from complications arising during pregnancy, about half of these from some type of toxæmia; 48 resulted from a complication of delivery, 32 from a post-delivery complication and 22 from abortive delivery. There has been an encouraging drop in maternal deaths caused by toxæmia during the past three or four years.

**Age at Death.**—Table 25 shows the distribution of maternal deaths by age group; the average age at death is about four years higher than the average age of all mothers at the time of childbirth. While death rates for all age groups of mothers have been declining, there have been rather significant changes in the rates. Formerly, the rate for mothers in the age group 30-34 was twice or three times as high as the rate for the 20-24 group, but recently mortality rates for the four age groups of mothers under 35 years of age have not been far apart, although after age 35 a sharp rise occurs.

## Section 4.—Natural Increase\*

The excess of births over deaths, commonly referred to as natural increase, is a very important factor in the growth of a population. Although the collection of Canadian birth and death statistics began only in 1921, some idea of the rate of natural increase in the early Canadian population may be learned from the estimates shown at the beginning of Sections 2 and 3, which resulted in the following natural increase rates:—

Intercensal Period	Estimated Average Annual Natural Increase Rate (per 1,000 Population)	Intercensal Period	Estimated Average Annual Natural Increase Rate (per 1,000 Population)
1851-61.....	23	1891-1901.....	14
1861-71.....	19	1901-11.....	18
1871-81.....	18	1911-21.....	16
1881-91.....	16		

Because of the combination of high birth rates and declining death rates—despite the fact that death rates were still relatively high—the annual rate of natural increase during the late 1800s and early 1900s varied between 14 and 23; in other terms, the population increased at the rate of 1.5 p.c. to 2.5 p.c. each year by natural increase alone, regardless of any increase attributable to immigration. During the 1920s and early 1930s the birth rate declined more than the death rate and the natural increase rate dropped to a record low of 9.7 in 1937. But higher birth rates during and after World War II and a gradually declining death rate caused the natural increase rate to rise steadily from 10.9 in 1939 to a record 20.3 in 1954. Although after that year there has been a steady drop because of declining birth rates, the natural increase rate in 1964 was still quite high at 15.9.

Table 1, pp. 236-237, gives average rates of natural increase in the provinces for five-year periods 1941-60 and Table 26 gives the provincial figures for males and females separately for 1941, 1951 and 1961-64. High birth rates and declining death rates have given Newfoundland, Alberta, New Brunswick and Quebec the highest rates of natural increase in Canada in recent years (excluding the Yukon and Northwest Territories).

\* For international comparisons, see Section 7, pp. 275-276.

<sup>1</sup> Excludes Newfoundland and the Yukon and Northwest Territories.

The rates of natural increase are higher for females than for males in all provinces because of the higher death rates for males. In the western provinces particularly, the ratio of males to females in the total population is higher than in other parts of Canada and this in itself tends to lower the rate of natural increase. In Canada, a country with a fairly young population and where immigration has been on a large scale, an excess of males is to be expected but the higher rate of natural increase for females may gradually reduce this excess. The trend is toward an eventual excess of females in the total population—as there now is in most European countries—unless immigration again raises the male ratio or death rates among males are greatly reduced.

**Natural Increase in Urban Centres.**—The classification of births and deaths by place of residence makes it possible to compile the natural increase in the population of urban centres; the figures for centres of over 20,000 population are presented in Table 2, pp. 238-240.

## Section 5.—Marriages and Divorces

### Subsection 1.—Marriages\*

In 1964 Canada's crude marriage rate was 7.2 per 1,000 population, an increase over the rate of 6.9 in 1963 which was the lowest since 1934. Provincial rates in 1964 varied from 6.2 per 1,000 population for Prince Edward Island to 7.5 for New Brunswick.

Table 27 gives the number of marriages and the marriage rates for Canada and the provinces for 1941, 1951 and the four consecutive years 1961-64, together with percentages of brides and bridegrooms according to place of birth. For the country as a whole, over 83 p.c. of the bridegrooms of 1964 were born in Canada and 69 p.c. in the province in which they were married; almost 87 p.c. of the brides were born in Canada and 74 p.c. in the province in which they were married. During the postwar years until 1959 an increasing number of marriages were of persons born outside the country, because of the heavy immigration of young persons. However, since 1959 the proportion of foreign-born bridegrooms declined from 19.6 to 16.8 p.c. in 1964 and the proportion of foreign-born brides from 15.9 to 13.6 p.c. There are wide variations in the pattern of intermarriage of foreign-born and native-born persons as between provinces; in the older Atlantic Provinces and in Quebec there is a greater tendency than in the other provinces to marry native Canadians and in these areas both partners are often born in the same province.

\* For international comparisons, see Section 7, pp. 275-276.

<sup>1</sup> Newfoundland included from 1951 and the Yukon and Northwest Territories from 1961.

**Age and Marital Status of Brides and Bridegrooms.**—Table 28 shows that 91.1 p.c. of the brides and 91.4 p.c. of the grooms in 1964 had never previously married, and that 4.8 p.c. of the brides and 4.2 p.c. of the bridegrooms had been widowed. The average age at marriage of bachelors was 25.4 years and that of spinsters 22.7 years. The average age of widowers and widows at time of remarriage was slightly more than double that of bachelors and spinsters.

**Religious Denominations of Brides and Bridegrooms.**—The distribution of brides and bridegrooms by religious denominations is roughly the same as that for the population as a whole. Table 29 shows the very strong influence that religion has on marriage. Nearly 70 p.c. of all marriages are between persons of the same religious denomination; in 1964 among those of Jewish faith it was about 90 p.c.; among Roman Catholics about 87 p.c.; United Church about 59 p.c.; and Eastern Orthodox about 70 p.c.

## 29.—Marriages by Religious Denominations of Contracting Parties, 1964

## Subsection 2.—Divorces

Before World War I the number of divorces granted in Canada represented less than one per 1,000 of the yearly number of marriages. After that War, however, there was a definite upward trend; the number advanced to 8,213 in 1947, declined gradually to a postwar low of 5,270 in 1951 and since then has again moved sharply upward; the 1965 preliminary figure of 8,941 was the highest on record.

## 30.—Dissolutions of Marriage (Divorces), by Province, 1941-65

NOTE.—Figures for individual years from 1900 to 1953 are given in the 1956 Year Book, p. 230, and for 1954-61 in the 1965 edition, pp. 263-264.

<sup>5</sup> Includes 12 in Yukon Territory and six in the Northwest Territories.

## Section 6.—Canadian Life Tables

Five official series of life tables for Canada and the provinces and regions have been published to date, based on deaths in the three-year period around each of the Censuses of 1931, 1941, 1951, 1956 and 1961. The life table values for 1961 are given in abbreviated form in Table 31.

Life tables give some measure of the health and general conditions of survival of an 'artificial' population in a conventional, standard form. A hypothetical number (100,000) of births of each sex is assumed as a starting point. The life tables show how, on the basis of the mortality rates at each age in the given years, these 100,000 of each sex are reduced in number by death. For example, during the year 1961, of 100,000 males born, 3,058 would have died in their first year, according to the mortality rates in effect during the period 1960-62, so that 96,942 would survive to one year of age; 179 would have died in their second year so that 96,763 survived to two years of age, and so on. At 100 years of age only 105 of the original 100,000 would have survived. The probability of death at each age is the ratio between the number of deaths and the population at each age. Finally, the expectation of life is the number of years which a person on the average might expect to live if the mortality rates in the given years remained constant throughout his lifetime.

Mortality rates at all ages for males have been almost consistently higher than for females. Males have the highest risk of mortality as compared with females during their first year of life, from their late teens to early 30s and from age 50 to 65. For both boys and girls the risk of mortality drops rapidly during childhood and is lowest at about age 10, increases gradually to about age 40 for males and about 50 for females and then rises steeply with advancing age. As an illustration of the information available from study of the life tables, it may be observed that at the mortality rates given in the 1961 life table (see Table 31) about 12,100 males would have died before reaching age 50 as compared with about 7,600 females; only 57,517 of the original group of 100,000 males would have survived to age 70 as compared with 72,746 females.

By 1961, life expectancy *at birth* in Canada had reached a new high point of 68.4 years for males and about 74.2 for females—comparable to the expectancy for other countries of the world with highly developed programs of medical and public health care. Once a child has passed its first year of life, however, its life expectancy increases appreciably. At one year of age a male child *at present mortality risks* may, on the average, expect to live an additional 69.5 years and a female almost 75 years, representing for an infant boy a gain of 1.2 years over his expectation at birth and for an infant girl a gain of 0.8 years. The expectation of life of a 15-year-old boy is 56.2 additional years; of a 15-year-old girl 61.5 years. At 25 years of age the expectation is about 46.9 years for men and 51.8 years for women and at age 70, 10.7 years for men and 12.6 years for women.

Table 32 summarizes the life expectancy figures extracted from the Canadian life tables for 1931, 1941, 1951, 1956 and 1961. According to these figures, life expectancy at birth for men increased about three quarters of a year between 1956 and 1961 and 1.3 years between 1951 and 1956, compared with 3.4 years from 1941 to 1951 and 2.9 years from 1931 to 1941; females gained one and one quarter years between 1956 and 1961 and 2.1 years between 1951 and 1956, compared with 4.5 years and 4.2 years, respectively, in the preceding decades. Thus, from 1931 to 1961 a total of 8.4 years was added to male life expectancy and 12.1 years to female longevity.

The increases in life expectancy have been predominantly at the younger ages, particularly in infancy, and diminish with advanced age. For example, from 1931 to 1961, 3.5 years were added to the life expectancy of a five-year-old male, 2.5 years to a 20-year-old, about one year to a 40-year-old and about half a year to a 60-year-old as compared with 8.4 years for a newborn male. During this period, life expectancy for a five-year-old female gained 8.1 years, for a 20-year-old 6.9 years, for a 40-year-old 4.4 years and for a 60-year-old two and three quarter years as compared with 12.1 years for a newborn female.

Longevity improved for both sexes, though more so and at all ages for females, but there was only slight improvement for males beyond middle life. Briefly, the rapid decline in the death rate for infants of both sexes is continuing but the declines are slower with advancing age, so that relatively stationary death rates were established from about 50 years onward for males and from about 80 years onward for females.

The fact that such a pattern exists is important in interpreting the results of these life tables. The arbitrary population base of 100,000 of each sex in the 1956 tables, for example, was subjected to the mortality rates in effect in 1960-62, and the life expectancy computed as *if those death rates at each age were to prevail during their lifetime*. Actually the theoretical 200,000 infants born in 1960-62 will most probably have a pattern of survival and life expectancy quite different from that of the present life tables as they will spend most of their lives under conditions of public health and medical care which in all likelihood will be superior to those prevailing in 1960-62.

The improvement in life expectancy, particularly among children and adolescents, was caused mainly by the substantial reduction in recent years in mortality from infectious diseases; on the other hand, diseases associated with middle and old age are much less amenable to control. It is therefore unlikely that improvement in life expectancy in the future will be comparable to that of the past 30 years. As approximately 9 p.c. of deaths in 1960-62 occurred among infants and another 77 p.c. among persons over age 50, any additional improvement must come as the result of further declines in mortality from conditions associated with childbirth and early infancy, further control of infectious diseases, prevention of accidents, and advances in combating diseases associated with middle and old age, such as cardiovascular-renal conditions and cancer.

Table 33 shows provincial or regional life expectancy for males and females at selected ages. According to the 1961 figures, male life expectancy at birth continues to be below 70 and that for females above 72 in all of the five regions. During the period 1931-61, life expectancy at birth for males increased from 60.00 to 68.35, or 8.35 years, varying from 6.32 years for the Prairie Provinces to 11.09 years for Quebec; life expectancy at birth for females rose from 62.10 to 74.17, or 12.07 years, varying from 10.08 years for British Columbia to 14.97 years for Quebec. Quebec showed the greatest improvement of any region among young males and females and middle-aged females, and British Columbia recorded the greatest improvement among middle-aged males.

## Section 7.—International Comparisons of Vital Statistics

Table 34 gives a summary of Canada's national and provincial vital statistics rates along with those of several other countries. It will be noted that among the countries listed the low crude death rate in Canada is bettered by three countries—Japan, Union of Soviet Socialist Republics and Venezuela—and that some of the provinces have lower rates than most other countries. The birth rate also helps to give Canada one of the fastest growing populations, currently ranking eighth among those listed. However, 12 countries reported lower rates of infant mortality, some as low as 15 per 1,000 live births (Sweden and Netherlands), as compared with Canada's rate of 24.7.

## 34.—Principal Vital Statistics Rates of Selected Countries, 1961

Note.—Countries are ranked according to the highest rates for births, marriages and natural increase and according to the lowest for deaths.

*The interpretation of the symbols used in the tables throughout the Year Book will be found on p. viii of this volume.*

Canada's growth in recent years has intensified many problems in the planning of health and welfare services and has shifted the emphasis toward new approaches and new programs. General prosperity, growing urbanization and industrialization, larger numbers of children and older persons in the population, and new concepts and knowledge in health and welfare matters have all contributed to needs for additional services.

\* Except where otherwise indicated, this Chapter was prepared (July 1966) by the Research and Statistics Division of the Department of National Health and Welfare, Ottawa.

A number of important developments took place or were under consideration in this area during 1965-66. With the April 1965 Throne Speech, Canada embarked on its "War on Poverty", a program for the full utilization of human resources and the elimination of poverty; planned measures included an expansion of the Area Development Program (ADA) and the Agricultural Rehabilitation and Development Program (ARDA), measures to assist the re-employment, relocation and retraining of workers, urban renewal measures, the establishment of a Company of Young Canadians to undertake projects for economic and social development in Canada and abroad, and the establishment of a Canada Assistance Plan. These measures and related matters were discussed at the federal-provincial conference on poverty and opportunity held in Ottawa in December 1965 and several of them were later formally undertaken.

The first Canadian Conference on Aging, sponsored by the Canadian Welfare Council and held in Toronto in January 1966, sought ways and means of improving the life of older people. Delegates represented labour, management, professional organizations, voluntary organizations and the churches. The report of the Special Committee of the Senate on Aging, released in February 1966, recommended a guaranteed income for older people, improvements in housing, health and institutional care, social services, community participation, recreation programs, and the establishment of a national commission on aging.

The Act to establish the Canada Pension Plan (SC 1964-65, c. 51), which was given Royal Assent on Apr. 3, 1965 and became operational on Jan. 1, 1966, established for the first time in Canada a comprehensive social insurance program of contributory, old age, disability and survivors' pensions. The legislation provides an earnings-related old age pension and adjusts the existing tax-financed flat-rate old age security pension so that the two programs form an integrated system. It also provides a program of supplementary pensions and benefits for disabled contributors and their dependent children, and survivors of contributors.

The Province of Quebec established the Quebec Pension Plan, which came into operation on Jan. 1, 1966. The Canada Pension Plan does not operate in Quebec because the legislation provides that the plan will not be operative in a province that establishes its own comparable program. It is significant that both the Parliament of Canada and that of Quebec have passed almost identical legislation in this field. The two plans are to be so closely co-ordinated that a person may contribute under one plan or the other, or to both plans interchangeably, during his contributory period and receive the same benefits as if he had contributed to one plan throughout this period. The introduction of the Canada and Quebec Pension Plans emphasized the need for uniform private pension legislation across Canada. Ontario amended the Ontario Pension Benefits Act with effect from July 30, 1965, and in Quebec the Supplemental Pension Plans Act was given Royal Assent on July 15, 1965. Both Acts regulate private pension plans, ensure portability and solvency of the private plans and require the provision of information to the members of the plan.

An amendment to the Old Age Security Act lowered the eligible age, provided for adjustment of the amount of the pension for increases in the cost of living, and eased residence requirements.

The Canada Assistance Act, which was given Royal Assent on July 14, 1966, provides for a comprehensive welfare system to replace the categorical programs of old age assistance, blind and disabled persons' allowances and unemployment assistance; extends existing social assistance and welfare coverage; and substitutes a needs test for a test of means as a qualification for assistance. Provincial programs for persons in need, including health care services, will be financially supported by federal-provincial cost-sharing arrangements.

In the health field, the federal Medical Care Act providing for the setting up of a comprehensive medical care insurance program was given first reading on July 12, 1966; further debate was postponed until October. On Sept. 1, 1965, the British Columbia Medical Plan

took effect and on July 1, 1966 the Ontario Medical Services Insurance Plan and the Alberta Health Program (an extension of the former Alberta Medical Plan) began paying benefits. These three provincial plans are voluntary and involve subsidization of premiums for low-income groups.

Supplementing the proposed federal medical program, a Health Resources Fund of \$500,000,000 was provided under the Health Resources Fund Act (SC 1966, c. 42) to assist the provinces in the construction and equipping of facilities for health research and training.

## PART I.—PUBLIC HEALTH

Provincial governments bear the major responsibility for health services in Canada, with the municipality often assuming considerable authority over matters delegated to it by provincial legislation. The Federal Government has jurisdiction over a number of health matters of a national character and provides important financial assistance to provincial health and hospital services. All levels of government are aided and supported by a network of voluntary agencies working in different health fields.

### Section 1.—Federal Health Activities

The Department of National Health and Welfare is the chief federal agency in health matters but important treatment programs are also administered by the Departments of Veterans Affairs and National Defence. The Dominion Bureau of Statistics is responsible for collection, analysis and publication of national health statistics, the Medical Research Council and the Defence Research Board administer medical research programs, and the Canada Department of Agriculture has certain health responsibilities connected with food production.

The Department of National Health and Welfare controls food and drugs, including narcotics, operates quarantine and immigration medical services, carries out international health obligations, and provides health services to Indians, Eskimos and other special groups. It advises on the visual eligibility of applicants for blindness allowances and co-operates with the provinces in the provision of surgical or remedial treatment for recipients of the allowances. Under the Public Works Health Act, supervision of health conditions is provided for persons employed on federal public works. Health counselling and medical supervision are provided for the federal Public Service. The Department also administers the civil aviation medical program for the Department of Transport.

The Department serves the provinces in an advisory and co-ordinating capacity and administers grants to provincial health and national voluntary agencies. Administration of federal aspects of the Hospital Insurance and National Health Grant Programs is a major activity. Co-ordination with the provinces on health matters is facilitated by the Dominion Council of Health, the principal advisory agency to the Minister of National Health and Welfare. Its membership includes the Deputy Minister of National Health, who acts as chairman, the chief health officer of each province, and five appointees of the Governor in Council. The Council meets semi-annually. Federal-provincial technical advisory committees of the Council deal with specific aspects of public health.

#### Subsection 1.—Medicare and the Health Resources Fund

**Medicare.**—Proposals for a plan of comprehensive medical insurance for all Canadians, administered by the provinces and with federal fiscal contributions, were made by the Prime Minister at the federal-provincial conference held in July 1965. The federal contributions would be dependent upon the fulfilment of four criteria by each provincial plan:

(1) that it cover, as a minimum, "all the services provided by physicians, both general practitioners and specialists", except for services available under other legislation and certain limited types of services, such as cosmetic surgery, that are not medically necessary; (2) that it cover all residents, or at least "be aimed at universal coverage", without exclusion because of age, economic circumstances or pre-existing conditions; (3) that it be "publicly administered, either directly by the provincial government or by a provincial government agency"; and (4) that benefits be fully transferable from one province to another. The federal contribution would be half the per capita cost of all insured services in all participating provinces multiplied by the number of insured persons in each participating province. The Medical Care Act embodying these principles was given first reading in the House of Commons on July 12, 1966 and was slated to come before the House again in October.

**Health Resources Fund.**—Supplementing the medicare program, the Prime Minister also proposed at the July 1965 conference the setting up of a Health Resources Fund "to support the construction and equipment of facilities for health research and training". He later announced that the proposed Fund would amount to \$500,000,000 to be expended over a 15-year period commencing in 1966; that, through the Fund, federal capital grants would be available for the construction, renovation and basic equipment of research establishments, teaching hospitals, medical schools and training facilities for other health personnel but that grants would not be available to meet the operating costs of such establishments; and that payments from the Fund would meet 50 p.c. of the cost of construction and basic equipment for the assisted projects.

The operation of the proposed Fund was discussed at the Federal-Provincial Conference of Health Ministers held Jan. 31 and Feb. 1, 1966, when the principle was accepted that, of the \$500,000,000, \$25,000,000 would be provided to the four Atlantic Provinces as special assistance over and above the normal 50-p.c. share, and that a major portion be allocated on a per capita basis; the allocation of the remainder was left for further study. An advisory committee consisting of representatives of federal and provincial Ministers of Health would, it was intended, review over-all provincial submissions concerning individual projects, advise on disbursements from the Fund, and consult with professional bodies for technical advice. Two technical conferences were held (Oct. 21-22, 1965 and Mar. 31-Apr. 1, 1966) to make preliminary and tentative arrangements for the implementation of the program. On July 11, 1966, the Health Resources Fund Act (SC 1966, c. 42) received Royal Assent.

### Subsection 2.—National Health Grant Program

The National Health Grant Program, inaugurated in 1948, makes federal grants available to the provinces for the developing and strengthening of public health and hospital services. Changes were made over the years to provide additional funds, increase flexibility and meet changing circumstances. Some of the headings under which grants had been made were merged or discontinued and new headings were added (see Table 1).

Up to Mar. 31, 1966, aid for hospital construction had been approved for 122,176 beds and 15,359 bassinets for patients, 23,355 beds for nurses, and 917 beds for interns. Approximately 42,000 health workers had been trained or were undergoing special training, and more than 7,000 health workers were employed, with Health Grant assistance. The amount expended in 1965-66 totalled \$45,477,968 or 75.3 p.c. of the total available; over the entire 18 years of the program, 79 p.c. of the available money had been actually spent. If for 1965-66 the \$9,500,000 in fiscal compensation received by Quebec is deducted from the total available, that total is reduced to \$50,880,280 and the expenditure in the remainder of Canada appears as 89.4 p.c. of the available amount.

**1.—Amounts Available and Amounts and Percentages Expended under the National Health Grant Program, by Grant, for the 18-year Period Ended Mar. 31, 1966 and for the Year Ended Mar. 31, 1966.**

### Subsection 3.—Hospital Insurance

The federal-provincial hospital insurance program, now established in all provinces and territories, covers 98.7 p.c. of the total population of Canada. This program was introduced under the federal Hospital Insurance and Diagnostic Services Act of 1957, by which the Federal Government shares with the provinces the costs of specified hospital services to insured patients. The choice of methods of financing and administering the program at the provincial level, and the choice of the types of service offered above the minimum stipulated in the Act, rest with the provinces.

Federal legislation covers only services in institutions approved to provide acute, chronic and convalescent care. Tuberculosis and mental hospitals are excluded from the federal-provincial plan, as are institutions providing custodial care. However, the psychiatric and tuberculosis units of general hospitals are included.

The basic range of in-patient benefits that, under the Act, each province is required to provide includes standard ward accommodation and meals, nursing service, drugs and biologicals, surgical supplies, the use of operating and case rooms, diagnostic procedures (including X-ray and laboratory procedures) together with necessary medical interpretations, and the use of radiotherapy and physiotherapy facilities where available. The same benefits for out-patients, although authorized for assistance under the federal legislation, are not mandatory upon provincial plans. All provinces except one provide, under the plan, insured out-patient services. The pattern varies from province to province but among the services offered are emergency care following accidents, diagnostic services and therapeutic services, including minor surgical and medical procedures. Some provinces provide certain psychiatric out-patient services.

Provinces use different methods of administering and financing their programs; money raised through general revenues, provincial sales taxes and personal premiums may be used separately or in combination.\* The Federal Government pays each province 25 p.c. of the per capita cost of in-patient services in Canada as a whole plus 25 p.c. of the per capita cost of in-patient services in the province, multiplied by the average for the year of the number of insured persons in the province. On a national basis, the federal contribution amounts to about 50 p.c. of sharable costs. However, for individual provinces the proportion of sharable costs met by the Federal Government varies, with a higher proportion of the cost of low-cost programs than of high-cost programs being met. Federal payments to the provinces under the program from July 1, 1958 to Dec. 31, 1965 totalled almost \$2,100,000,000. During 1965, federal payments to the individual provinces† and territories totalled \$327,000,000, divided as follows: Newfoundland, \$11,100,000; Prince Edward Island, \$2,300,000; Nova Scotia, \$17,200,000; New Brunswick, \$14,100,000; Ontario, \$162,200,000; Manitoba, \$22,100,000; Saskatchewan, \$24,500,000; Alberta, \$33,400,000; British Columbia, \$38,900,000; Yukon Territory, \$322,000; and the Northwest Territories, \$675,000.

Tables 2 and 3 give data for hospitals listed in the federal-provincial hospital insurance agreements. The bulk of the hospitals listed in those agreements are "budget review" hospitals, which are subject to provincial budget-approval. Budget review hospitals include publicly owned general hospitals providing acute or short-term care and special hospitals such as pediatric, maternity, orthopedic and chronic hospitals. Also listed in the agreements are "contract" and federal hospitals. Contract hospitals are private and industrial hospitals that provide insured hospital care at a contractually agreed rate per patient-day.

The 1,295 reporting hospitals, in all three categories listed in the federal-provincial agreements, had a total of 132,623 beds and cribs set up at the end of 1964, a rate of 6.9 beds per thousand population. Provincial rates ranged from 5.2 in Newfoundland to 8.9 in Alberta, and territorial rates were even higher. The total number of patient-days per thousand population in 1964 also varied considerably from province to province; that for Canada was 2,021.0, considerably lower than those for Saskatchewan and Alberta but much higher than the rate for Newfoundland. In 1964, 90.8 p.c. of all patient-days in hospitals were paid for under the federal-provincial plan.

\* Hospital insurance is financed in the following ways: (1) general revenues only—Quebec, Newfoundland, Prince Edward Island, New Brunswick, Yukon Territory and the Federal Government; (2) general revenues plus a daily charge at time of service—British Columbia, Alberta and the Northwest Territories; (3) sales tax only—Nova Scotia; (4) premiums, sales tax and other general revenues—Saskatchewan; and (5) premiums, with subsidies from general revenues—Ontario and Manitoba.

† Since Jan. 1, 1965, payments no longer have been made by the Federal Government to the Province of Quebec under the hospital insurance program, the financial arrangements having been transferred to a system of tax abatement.

## 2.—Number of Beds and Cribs Set Up in Reporting Hospitals Listed in Hospital Insurance Agreements, with Rate per 1,000 Population, by Province, as at Dec. 31, 1964

Province	No. of Hospitals Reporting	Beds and Cribs		Province or Territory	No. of Hospitals Reporting	Beds and Cribs

New Brunswick.....	42	1,204,638	1,952.4	1,066,984	1,752.0
Quebec.....	269	10,382,542	1,866.7	9,702,623	1,749.5
Ontario.....	319	13,966,164	2,120.6	12,542,986	1,935.0
Manitoba.....	104	2,008,904	2,097.0	1,794,648	1,938.7
Saskatchewan.....	157	2,250,575	2,386.6	2,135,453	2,297.0
Alberta.....	161	3,382,661	2,362.2	3,140,045	2,211.3
British Columbia.....	111	3,414,103	1,964.4	2,850,357	1,653.3
Yukon Territory.....	5	22,520	1,407.5	18,334	1,222.3
Northwest Territories.....	26	67,844	2,713.8	41,676	1,667.0
<b>Canada.....</b>	<b>1,298</b>	<b>38,873,442</b>	<b>2,021.0</b>	<b>35,280,306</b>	<b>1,855.7</b>

<sup>1</sup> Per 1,000 total population; based on intercensal population estimates as at June 1, 1964.

<sup>2</sup> Per 1,000 insured persons under provincial plans.

The operating cost of budget review hospitals in Canada in 1964, as shown in Table 4, including items of expense and costs of services not covered under the hospital insurance program, amounted to \$981,662,000. Salaries and wages accounted for 64.6 p.c. of that total; medical and surgical supplies for 3.1 p.c., drugs for 3.8 p.c., raw food for 5.3 p.c., other departmental supplies and expense for 16.0 p.c., and such items as interest, depreciation and rent for the remaining 7.1 p.c.

In 1964, the total per capita operating cost of budget review hospitals in Canada was \$51.04, ranging among the ten provinces from \$33.63 in Newfoundland to \$55.07 in Ontario. The provincial variations are due in part to differences in the number of patient-days per thousand population and in the range of hospital care that is provided.

**4.—Revenue Fund Expenditures of Budget Review Hospitals, by Type of Account and by Province, 1964**

Province or Territory	Departmental Expenditures						Total Revenue Fund Expense <sup>2</sup>

<sup>1</sup> Includes fuel, electricity, water, insurance, replacements of bedding and linen, laundry supplies, housekeeping supplies, repairs to buildings, furniture and equipment, maintenance of physical plant, and office supplies and services.

<sup>2</sup> Includes other revenue fund expense (mainly items such as interest, depreciation and rent) that do not relate to particular departments of the hospital.

<sup>3</sup> Based on patient-days during year for adults and children,

excluding newborn.

<sup>4</sup> Based on intercensal population estimates as at June 1, 1964.

#### Subsection 4.—Food and Drug Control

The provisions of the Food and Drugs Act, administered by the Food and Drug Directorate of the Department of National Health and Welfare, apply to the manufacture, advertising, packaging and sale of foods, drugs, cosmetics and medical devices anywhere in Canada. Wide powers are authorized under this legislation to maintain the safety, purity and quality of food and drug products and to prevent misrepresentation in labelling and advertising. There are prohibitions, for example, on the sale of food or drugs that do not meet prescribed standards, are harmful, adulterated, dirty, improperly stored, or manufactured under unsanitary conditions. The Act also prohibits the advertising of any food, drug, cosmetic or medical device as a preventive or cure for a number of serious diseases and also lists drugs that may be sold only by prescription.

Standards of safety and purity are maintained through constant and widespread inspection and laboratory research. The inspection of food-manufacturing establishments plays a major role in the production of clean, wholesome foods containing ingredients that meet recognized standards. Changing food technology requires the development of methods of laboratory analysis to ensure the safety of new types of ingredients and packaging materials. The Food and Drug Regulations list chemical additives that may be used in foods, the amounts that may be added to each food and the underlying reason. Considerable emphasis is placed upon studies to ensure that the levels of pesticide residues in foods do not constitute a health hazard. The effect of new packaging and processing techniques on the bacteria associated with food spoilage is also of special concern. Since the Act is intended for the protection of consumers, a section of the Directorate obtains consumer opinions, deals with individual consumer complaints and provides information on which consumers can base opinions.

Drug standards are subject to continuous review and testing. Detailed information on all new drugs must be reviewed by the Directorate to determine compliance with requirements before release for sale is permitted. Drug regulations set standards for drug manufacturing, facilities and controls, and prescribe additional safeguards in the distribution of investigational and new drugs. Drug manufacturing requirements relate to sanitation of facilities, employment of qualified personnel, testing to ensure standards of quality and safety at stated stages of processing, maintenance of records of testing performance, together with a system of control to enable a complete and rapid recall of any lot or batch of drugs from the market. The controls over clinical trials and marketing of new drugs require detailed information to be submitted to the Directorate concerning the method of manufacture, the tests applied to establish standards of safety and quality, and substantial evidence of the clinical effectiveness of the new drug for the purposes stated. Samples of the final product must also be submitted. Before carrying out clinical trials, a manufacturer also must file complete data on his experience with the drug including any evidence of adverse side effects, and the qualifications of the persons to be engaged in its investigational use. The Minister may suspend clinical testing based on this evidence if he feels that it is in the public interest to do so; in such case the manufacturer has the right to appeal the decision. Drugs expressly prohibited from sale are thalidomide and lysergic acid diethylamide, except under certain conditions as specified in the regulations, whereby sale by a manufacturer to an institution for clinical use or laboratory research by qualified investigators may be approved by the Minister. Any drug that can be classed as a sedative, hypnotic or tranquillizer is listed to be sold only on prescription. The licensing of persons dealing in certain drugs classed as barbiturates and amphetamines is required as well as the keeping of special records and the limitation of their use to medical purposes.

The Food and Drug Directorate administers the Proprietary or Patent Medicine Act, which is concerned with the registration before marketing and the annual licensing of secret-formula medicines sold under proprietary or trade names.

Since early 1965 the Directorate has conducted an adverse-drug-reaction reporting program in 16 teaching hospitals across Canada to recognize and investigate reactions to drugs. The co-operation of the medical, dental, veterinary and pharmaceutical pro-

fessions was solicited in advising the Directorate of such reactions in private practice. Close liaison is maintained with the World Health Organization and other authorities in foreign countries for the prompt reporting of such reactions.

Regulation of the supply and use of narcotic drugs is carried out under the Narcotic Control Act, as revised in 1961. This legislation prescribes a maximum penalty of seven years with no minimum for illegal possession; a maximum penalty of life imprisonment for trafficking; and minimum and maximum penalties of seven years and life imprisonment, respectively, for illegal export and import. The Royal Canadian Mounted Police and other law-enforcement agencies continue to make every effort to keep the illicit traffic to a minimum.

### Subsection 5.—Medical Services

Through its Medical Services Branch, the Department of National Health and Welfare provides several direct and indirect types of medical service, as described in the following paragraphs. "Indirect" services are provided by hiring local services where practicable.

**Indians and Eskimos.**—Medical and public health services are made available to registered Indians or Eskimos who are not included under provincial arrangements and who are unable to provide for themselves. A large volume of the service in treatment and health education is rendered to patients through 84 Departmental out-patient clinics staffed by medical and other public health personnel. In remote areas, the key facility is frequently the Departmental nursing station, a combined emergency treatment and public health unit having two to four beds under the direction of one or two nurses; 43 of these are operated throughout Canada.

Where practicable, there has been an increasing integration of Indians into provincial and municipal health agencies and the number of hospitals and other facilities provided specifically for them have been reduced accordingly. At present, the Department maintains 16 hospitals at strategic points and co-operates elsewhere with community, mission or company hospitals. Indians are included under all provincial prepaid insurance plans for hospital care and other forms of medical care but in almost all cases the total cost of mental and tuberculosis care is borne directly by the Federal Government. Indian and Eskimo health workers are trained to give instruction in health care and sanitation.

**Northern Health.**—Because of the special problems in developing health services in the Far North, the Department has been given the responsibility of co-ordinating federal and territorial health care for all residents. In so doing, it undertakes the functions of a health department for the Council of the Northwest Territories and assists the territorial government of the Yukon Territory to provide certain health services. Close liaison is maintained with the federal departments directly responsible for administrative matters affecting these areas.

In the Yukon Territory, services for the total population administered through the Commissioner for the Yukon and provided on a cost-sharing basis with the Department of National Health and Welfare include complete treatment for tuberculosis, payment for services rendered at the Alberta cancer clinics, mental hospital care through arrangements with the Province of British Columbia, and medical care for indigent patients. Public health nursing services, measures for control of communicable diseases, and administration of the principal public hospital are primarily the responsibility of the Department. Similar services are provided in the Northwest Territories, the costs being shared by the Department of Indian Affairs and Northern Development and the Department of National Health and Welfare. Indigent residents are eligible for medical, dental and optical services as well as for tuberculosis and mental care.

**Sick Mariners.**—The Department provides compulsory prepaid medical, surgical, hospital and other treatment services to crew members of all foreign-going ships arriving in Canada and Canadian coastal vessels in interprovincial trade, and provides medical,

surgical and treatment services on an elective basis to crew members of Canadian fishing and government vessels. (Canadian seamen obtain their hospital care under the provincial hospital insurance plans.)

**Leprosy.**—Since 1960, isolation and treatment of persons suffering from leprosy have been arranged in their home neighbourhoods. Under the provisions of the Leprosy Act, facilities for the diagnosis and treatment of leprosy are provided in a six-bed unit of the Hôtel-Dieu Hospital at Tracadie, N.B.

**Quarantine.**—Under the Quarantine Act, all vessels, aircraft and other conveyances and their crew and passengers arriving in Canada from foreign countries are inspected by the quarantine officers to detect and correct conditions that could lead to the entry into Canada of such diseases as smallpox, cholera, plague, yellow fever, typhus and relapsing fever. Fully organized quarantine stations are located at all major seaports and airports.

**Immigration.**—Under the Immigration Act and the Department of National Health and Welfare Act, the Immigration Medical Service conducts in Canada and other countries the medical examination of all applicants for immigration to Canada and also provides treatment for certain classes of persons after arrival in Canada, including immigrants who become ill en route to their destination or while awaiting employment.

**Public Service Health Counselling.**—Health counselling is offered through Medical Services units to federal employees throughout the country. This service is primarily diagnostic and advisory only but emergency treatment can also be given. The Public Service Health Counselling Division also examines civilian aviation personnel and advises on standards of physical fitness required for them.

**Aerospace Medicine.**—Research on civil aerospace medicine is conducted by the Department in close liaison with the National Research Council, the Defence Research Board and the Royal Canadian Air Force Institute of Aviation Medicine.

**Regulation of Hygienic Standards.**—The Department is responsible for regulating hygienic standards on federal property, interprovincial common carriers, Canadian shipping and aircraft.

**Coast Guard Medical Service.**—The Department provides a medical service for and in conjunction with the Canadian Coast Guard.

### Subsection 6.—Radiation Protection

A comprehensive radiation protection program has been developed in Canada in response to the rapidly increasing use of radioactive materials, X-ray equipment and nuclear reactors in medicine, industry and research, and to increasing concern about radiation from atmospheric testing of nuclear weapons, from medical X-ray procedures and from natural sources.

Because of the need for national controls over dealings with uranium and by-product materials, the Federal Government has developed procedures for the safe handling and use of all radioactive materials, implemented through the close collaboration of federal and provincial health departments supported by special advisory committees. Acting under the federal Atomic Energy Control Regulations, the Department of National Health and Welfare reviews all applications for radioisotope licences and recommends health and safety conditions; it also provides dosimetry services for measuring and recording the personal radiation exposures of workers handling beta-ray, gamma-ray and neutron sources. Licensed establishments are inspected by federal or provincial inspection officers. The Department serves as the co-ordinator for the federal departments and agencies that are capable of providing specialized radiation protection services, particularly in the event of radiation accidents involving possible exposure of members of the public; it also provides

'whole-body counting' and bio-assay facilities for the follow-up of persons who may have ingested or inhaled radioactive contamination. It gives short-term training courses in radiation protection for persons with varying degrees of responsibility for radiation protection on a day-to-day basis. Committees of the Atomic Energy Control Board, including federal and provincial representatives, give special attention to the health and safety problems associated with the siting, design, construction and operation of nuclear reactors and charged-particle accelerators.

Although there is no federal regulatory authority to provide health and safety supervision over the use of X-rays, the Department has established a committee on the development of X-ray safety standards to recommend uniform standards and procedures throughout Canada. Five provinces (Nova Scotia, Quebec, Ontario, Saskatchewan and Alberta) have enacted specific enabling legislation applicable to X-rays and two (Nova Scotia and Saskatchewan) have issued regulations requiring registration of operators and/or equipment. The Department's personnel dosimetry service is available to X-ray workers and its reports are given to the provincial departments of health.

A comprehensive nation-wide monitoring program has been developed to assess the exposure of the public to radiation from radioactive fallout from nuclear-weapons testing. The Department is assisted in the systematic collection of samples of air, precipitation, soil, wheat, milk and human bone by the federal Departments of Transport and Agriculture and pathologists in hospitals throughout Canada. Reports of the concentration of such fallout components as strontium-90 and cesium-137 in these samples are published monthly. Because of a unique food-chain cycle in the Far North, a study of cesium-137 in the North is included in the nation-wide program, under which measurements are made of cesium-137 in caribou and reindeer meat and in human urine. In addition, direct measurements of cesium-137 levels in living persons are made using portable and fixed 'whole-body counters'.

### Subsection 7.—Health Research and International Health

**Health Research.**—Health research in Canada is carried on in universities, hospitals, research institutions and government departments. The main sources of financial support are governments, voluntary agencies, charitable foundations, professional bodies and business corporations.

The Federal Government conducts medical and dental research (intramural research) in the Department of National Health and Welfare and the Defence Research Board. The Medical Research Council, the National Research Council, the Department of National Health and Welfare, the Department of National Defence, the Department of Veterans Affairs, and the Queen Elizabeth II Fund all give financial support to research in universities, hospitals and other institutions (extramural research).

The Medical Research Council, formed in 1960 from the National Research Council's former Division of Medical Research (see p. 149), is the principal federal health-research advisory and co-ordinating agency. Its primary concern is the support of fundamental research in the basic medical sciences. It administers most of the federal medical research grants that support full-time investigation by research scientists in Canadian medical schools and their affiliated hospitals. The National Research Council pursues in its broad program many investigations relevant to health. Its Associate Committee on Dental Research administers specific grants for dental research and for training dental-research personnel.

The Department of National Health and Welfare supports both extramural and intramural health research, mainly of an applied nature. Intramural research is carried on by the Food and Drug Directorate, the Medical Services Directorate, the Health Insurance and Resources Branch, by several divisions and laboratories of the Health Services Branch, and by the Research and Statistics Division. The Department's extramural research program is composed of public health research, surveys and studies that have the prior approval of the provinces for assistance under the National Health Grant Program (see p. 280).

Assisted projects mainly fall into one of the following areas: prevention of disease and disability; operational or administrative research on health programs and services; epidemiological studies; or environmental health, sanitation and public health engineering.

The Defence Research Board sponsors both intramural and extramural research on medical problems of defence interest (see Chap. XXVI, Sect. 1, Subsect. 4). In addition, a special unit to conduct research in aviation medicine is in operation at McGill University. The Department of Veterans Affairs maintains a program of medical research in its hospitals and clinics across Canada, mainly dealing with conditions affecting aging, such as arthritis and arteriosclerosis (see also p. 334). The Queen Elizabeth II Fund for Research in the Diseases of Children, established by the Federal Government in 1959, makes a fixed annual sum available for training researchers and scientists in children's diseases.

**International Health.**—Canada actively assists and co-operates with the World Health Organization (WHO) and the other specialized agencies of the United Nations whose programs have a substantial health component or orientation. Capital and technical assistance are provided to developing countries through the Colombo Plan and other bilateral aid programs. Health training is provided for a number of persons coming to Canada each year under the different technical co-operation schemes (see p. 171 and pp. 178-181); during 1965, 112 trainees arrived, bringing the total number of trainees in Canada during the year to 282. These persons were working in a wide range of health disciplines under the External Aid Program but with greatest concentration in undergraduate medicine and in public health and nursing specialties.

Canadian experts in health legislation, health administration and related areas undertook specific assignments abroad during the year and teachers and specialists in a number of clinical fields were provided in response to requests from the developing countries. Capital assistance, primarily through the provision of cobalt beam therapy units for cancer treatment centres in the Colombo Plan area, was continued.

Canada concluded its membership on the Executive Board of the WHO in May 1965 but its term of office on the Executive Board of UNICEF was renewed at the beginning of the year. The Deputy Minister of National Welfare, Canada's representative on the Board, was elected Chairman for the period commencing February 1966 through July 1968.

To carry out Canada's obligations under the International Sanitary Conventions, the Department of National Health and Welfare maintains quarantine measures for ships and aircraft entering Canadian ports and provides accommodation and necessary medical care for persons arriving in Canada who require quarantine (see p. 287).

The Department is responsible for the enforcement of regulations governing the handling and shipping of shellfish under the International Shellfish Agreement between Canada and the United States and, at the request of the International Joint Commission, participates in studies connected with control of pollution of boundary waters between Canada and the United States as well as with problems caused by atmospheric pollution. Other international health responsibilities include the custody and distribution of biological, vitamin and hormone standards for WHO and certain duties in connection with the Single Convention on Narcotic Drugs, 1961, as well as Canada's representation on the Narcotic Commission of the United Nations.

### Subsection 8.—Consultative and Technical Services

The extension of technical and consultative assistance to the provinces is a function of the Health Branch of the Department of National Health and Welfare. The following specialized services supply consultation and information, advise on health care projects, co-ordinate activities and planning, and exercise leadership in promoting high standards of service: Aerospace Medicine and Safety; Child and Maternal Health; Dental Health; Emergency Health; Epidemiology; Health Education; Laboratory of Hygiene; Medical Rehabilitation; Mental Health; Nursing; Nutrition; Occupational Health; Planning and

Evaluation; Public Health Engineering; Research Development; Health Grants; Health Resources; Hospital Insurance and Diagnostic Services; Health Facilities Design; Medical Care; and Research and Statistics.

## Section 2.—Provincial and Local Health Services

Provincial and local health services may be grouped into several broad categories: provincial preventive public health services; local preventive public health services; services for specific diseases or disabilities combining prevention and treatment; services related to general medical and hospital care; and services for disabled and chronically ill persons.

Provincial and local governments co-operate closely in providing community public health services. The autonomy of the provinces and their social, economic and geographic diversity make for some variety in legislative provisions, in financial arrangements and in the detailed division of functions between provincial health departments and local and voluntary agencies. Each province, however, offers all or nearly all of a basic range of public health services, which includes environmental health, occupational health, communicable disease control, maternal and child health, dental health, nutrition, health education and public health laboratories.

### Subsection 1.—Provincial Preventive Public Health Services

**Environmental Health.**—The control of factors in the environment that are harmful to physical health is a rapidly expanding area of public health activity. Much of the work in community sanitation involves traditional inspection duties essential to the maintenance of pure milk, water and food supplies, disposal systems and provision of sanitary conditions in public areas. Increasing industrialization and urbanization, however, have both magnified the old problems and imposed new responsibilities. Air pollution, water pollution, radiation exposure and the use of pesticides are emerging as major environmental problems, necessitating the co-operative efforts of governments and other agencies in research and in planning effective control measures.

**Occupational Health.**—Services designed to prevent accidents and occupational diseases and to maintain the health of employees are the common concern of provincial health departments, labour departments, workmen's compensation boards and industry management. Provincial agencies regulate working conditions and offer consultant and educational services to industry. All provinces have legislation (Factory Acts, Shop Acts, Mines Acts, Workmen's Compensation Acts) setting health safety standards for employment.\*

**Communicable Disease Control.**—There are separate divisions of epidemiology or communicable disease control in six provinces; in the other provinces these functions are handled by other provincial medical consultants. Local health authorities undertake case-finding and diagnostic services in co-operation with public health laboratories, carry out epidemiological investigations and often participate in tuberculosis and venereal disease control measures. All provincial health departments organize immunization programs for the public against diphtheria, tetanus, poliomyelitis, whooping cough and smallpox. Through agreement with the Federal Government, live oral poliovirus vaccine (Sabin) as well as Salk vaccine is made available by provincial health departments for immunization against poliomyelitis. Other agents such as gamma globulin may be provided under certain conditions for protection against measles and infectious hepatitis.

**Maternal and Child Health.**—Most provincial health departments have maternal and child health divisions under medical direction or have made other administrative arrangements to provide consultant services in this field. In addition, six of the provinces

\* See Chapter XVIII, Section 1, Subsection 2, for provincial labour legislation.

have consultant nursing services within these divisions. Provincial divisions provide advisory services to local health departments and to hospitals, conduct studies of local problems and needs, and assist in the training of health personnel.

**Dental Health.**—All provincial health departments have dental health divisions that administer programs varying under local conditions but directed mainly to the training of dentists and dental hygienists in public health, the operation of children's preventive and treatment clinics, and health education. Water fluoridation projects involving 4,324,000 people are in operation in eight provinces and in the Northwest Territories. Four provinces—Alberta, Manitoba, Ontario and Nova Scotia—have set up, in conjunction with their dental schools, special courses for dental hygienists. In all ten provinces clinical care is provided for children in remote rural areas. A locally sponsored plan in which the cost of dental services for children is shared by the community and the provincial health department is in operation in more than 90 communities in British Columbia.

**Nutrition.**—Services include technical guidance, education, consultation and research. In some provinces, school lunch programs are sponsored and dietary supplements distributed. Five provinces have special nutrition divisions; in other provinces, consultants in nutrition function under a broader grouping of departmental services.

**Health Education.**—A basic concern of provincial health authorities is to stimulate public interest in important health needs, and most provincial health departments have a division of health education directed by a full-time professional 'health educator'. The division may also provide consultative services to the management of the department, to local health authorities and to voluntary associations.

**Public Health Laboratories.**—The public health laboratory was one of the earliest provincial services developed to assist local public health departments in the protection of community health and the control of infectious diseases. Public health bacteriology (testing of milk, water and food), diagnostic bacteriology and pathology are the principal functions of the laboratory service, with medical testing for physicians and hospitals steadily increasing in volume. Efforts to co-ordinate public health and hospital laboratory services and measures to bring laboratory facilities to rural areas are among the recent developments.

### Subsection 2.—Local Preventive Public Health Services

Local health authorities are responsible generally for the administration and enforcement of local regulations and by-laws relating to health and for the direct provision of various preventive health services. The scope of these services varies greatly in different areas and provinces but basic programs are similar, covering environmental sanitation, communicable disease control, child, maternal and school health, health education and vital statistics. Vital statistics are collected locally and information is used to analyse and plan public health activities. Among other services provided locally by some health units or departments are mental health, occupational health, community nutrition, and preventive dental health. Increasing attention is being directed toward measures designed to control the chronic diseases, to extend the period of active life, and to provide adequate public health protection for the aging segment of the population.

**Health Units.**—Full-time local public health services under the direction of full-time medical health officers have been developed partly through municipal health departments, partly through joint provincial-local health units, and partly through provincial health districts. City health departments are administered and financed directly by the municipality concerned, usually through a municipal board of health. Local health units are designed primarily for rural areas with staff serving county or other combinations of local government jurisdictions, and financial and administrative responsibility shared between provincial and local authorities; although the division of responsibility varies among prov-

inces, the trend is toward an increasing degree of provincial control. In some provinces (in the Atlantic Provinces particularly) provincially administered local health districts provide services without administrative participation by local citizens.

At the end of 1965, full-time local public health services were supplied through 34 urban health departments covering 6,400,000 persons and 190 local health units covering 10,700,000 persons. The total number of full-time health departments, units and districts had increased to 224 from 157 in 1948. The basic staff of an urban health department or local health unit usually comprises a medical officer of health, some public health nurses, and sanitation inspectors. To a great extent, the services provided depend upon having a sufficient number of qualified persons employed by the agency. Total full-time staff employed by local agencies at the end of 1965 numbered 5,896, of whom 2,674 were in urban health departments and 3,222 in local health units. Many areas not requiring full-time services of health personnel employ part-time personnel but more often these services are provided directly to the local area by the provincial health department. In addition, provinces are responsible for providing local health services in municipally unorganized territories.

### Subsection 3.—Services for Specific Diseases or Disabilities

**Mental Health.**—Treatment programs for the mentally ill have centred mainly around three types of facilities: the mental hospital, the psychiatric unit in the general hospital and the organized community mental health clinic. These facilities, however, no longer have separate and distinct functions. New emphasis on the role of the community and its resources in the treatment and rehabilitation of the mentally ill is affecting the whole program of in-patient care. Utilizing the basic clinical facilities of general hospitals and mental hospitals, the community program is extending its scope and usefulness through the provision of day-care centres, sheltered workshops, half-way houses, and foster home and boarding home care. Most of the large general hospitals in Canada have organized psychiatric units, providing bed accommodation for short-stay patients. Further planning in community-based services concerns the development of small regional psychiatric hospitals from which a comprehensive community program will emanate. Examples of this type are the 150-bed hospital in Yorkton, Sask., a 68-bed psychiatric hospital in Selkirk, Man., and the developing community facilities for in-patient, out-patient and day care in several Ontario cities, including Ottawa, Sudbury and Windsor. The Atlantic Provinces, Quebec and the western provinces are all developing new facilities and strengthening existing ones.

Special centres for the assessment and diagnostic evaluation of mentally retarded children are also being developed. Day-training schools or classes for the trainable retarded, sponsored by local associations of parent groups forming the Canadian Association for Retarded Children, are organized throughout the land and research programs designed to afford better understanding and management of mental retardation problems are being developed and expanded in all provinces.

Most public mental hospitals provide care and treatment for all types of mental illness. New programs of recreational and industrial therapy and enlarged and modernized clinical and surgical facilities are examples of widespread improvements in mental hospital care that particularly benefit patients undergoing active treatment. More recently, planning has been undertaken to reassess the status of the long-term chronically ill patient. Since 1961 new legislation governing the admission and care of the mentally ill has been enacted in six provinces—Nova Scotia, Ontario, Saskatchewan, Alberta, Manitoba and British Columbia—designed to promote easier and more informal methods of admission and discharge and to establish machinery guaranteeing periodic review of the medical certification of long-term patients.

A great part of the cost of care in mental hospitals is borne by the provincial governments, although a charge, according to ability to contribute, may be made in some provinces. Newfoundland and Saskatchewan provide complete free care; Manitoba covers minimum

maintenance costs for all patients; in Nova Scotia the provincial hospital gives free care to patients requiring active treatment; and in Ontario mental-institution treatment is included in the hospital care insurance plan.

**Tuberculosis.**—The fight against tuberculosis is one of the major programs of all health departments. Free hospitalization and free drug treatment, both on an in-patient and domiciliary basis, are provided. In two provinces extensive BCG programs are in effect and in the other provinces this prophylactic is provided to groups at special risk. Case-finding programs in the form of community tuberculin and X-ray surveys, surveys of high risk groups, and the follow-up of all arrested tuberculosis cases are routine. These activities have resulted in a decline in the Canadian tuberculosis death rate of 85 p.c. since 1951; in 1965 the rate was 3.6 per 100,000 population. The number of beds set up in public sanatoria declined from a peak of 18,977 in 1953 to 6,462 in 1965.

**Cancer.**—Health departments and lay and professional groups working for the control of cancer have been concerned mainly with four aspects of the problem—diagnosis, treatment, research and public education. In cancer detection and treatment, specialized medicine, hospital services and an expanding public health program are closely related. There are programs operating under health departments in four provinces; four others have provincially supported cancer agencies or commissions. These sponsor the work of diagnosis and treatment in special clinics, located usually within the larger general hospitals. Under the provincial hospital insurance plans, the benefits pertaining to in-patient care in the treatment of cancer are essentially similar in ten provinces and include such special services as diagnostic radiology, laboratory tests and radiotherapy. Similar services for out-patients are covered either by hospital insurance or by federal-provincial cancer control grants. Comprehensive free medical programs for cancer patients are in operation in Saskatchewan and Alberta and for cancer in-patients in New Brunswick.

**Venereal Disease.**—Free diagnostic and treatment services are available in all provinces but the operation of government clinics is being increasingly superseded by the method of supplying free drugs to private physicians who are reimbursed for treatment of indigents on a fee-for-service basis.

**Alcoholism.**—Ontario, Manitoba, Alberta and British Columbia carry out research and education programs and operate centres for treatment, supported largely by public funds. Ontario, Saskatchewan and Alberta also have rehabilitation programs for alcoholic inmates of reform institutions. Legislation in Newfoundland, New Brunswick, Nova Scotia and Quebec authorizes the setting up of similar agencies to initiate research and education studies in those provinces.

**Other Diseases or Disabilities.**—Services for persons with chronic disabilities, such as heart disease, arthritis, diabetes, visual and auditory impairments and paraplegia have been developed largely by voluntary agencies assisted by federal and provincial funds. (See also pp. 296-297.)

#### Subsection 4.—Public Medical Care

Province-wide medical care insurance programs are operating in Saskatchewan, Alberta, British Columbia, Ontario and Newfoundland, with differences in the degree and extent of coverage and in benefits provided. In addition, most of the provinces have programs for public assistance recipients. In the present context, public medical care is grouped into four broad categories: provincial universal-coverage medical care programs; provincially sponsored or assisted medical care programs; provincial programs for public assistance recipients; and provincial programs for other selected groups.

**Provincial Universal-Coverage Medical Care Programs.**—Saskatchewan is the only province having a universal-coverage medical care program. Since July 1962, every person who has resided in Saskatchewan for three months (and is not entitled to receive

medical services under other programs) and has paid, or has had paid on his behalf, the required premium is entitled to have payment made on his behalf from the Medical Care Insurance Fund for medical, surgical and obstetrical care, without limit, in his home, in the doctor's office and in hospital, from his physician-of-choice (including payment at specialists' rates for referred specialists' services). There are no restrictions relating to age or pre-existing conditions. Physicians may elect to receive payment in a number of ways; usually either they choose to receive direct payment from the Medical Care Insurance Commission at 85 p.c. of the 1959 Schedule of Minimum Fees of the College of Physicians and Surgeons of Saskatchewan (as amended) as payment in full, or their patients enrol voluntarily with an approved health agency, which pays the physician an amount equal to the amount paid to the agency by the Commission in respect of the physician's assessed account. In 1965, annual premiums of \$12 for a single person and \$24 for families accounted for 25 p.c. and general revenue contributions for 73 p.c. of the Commission's total receipts. There were more than 887,000 persons covered by the Saskatchewan Medical Care Insurance Act at the end of June 1965, or about 93 p.c. of the provincial population. Most of those not covered were protected under other public programs, federal or provincial.

**Provincially Sponsored or Assisted Medical Care Programs.**—Three provinces—Alberta, British Columbia and Ontario—have established provincially assisted voluntary medical care programs.

The Alberta Medical Plan, which became effective Oct. 1, 1963, is designed to help residents with low incomes who voluntarily purchase medical care insurance from approved non-profit and commercial agencies. The approved carriers must make available to all residents a program of insurance that provides the attendance of physicians in home, office or hospital, as well as surgical, specialist and general diagnostic services. Maximum premium rates set by the province must not be exceeded. The Plan is financed completely from personal premiums but there is provision for government subsidization of the premium costs of low-income persons to the extent of 80 p.c. for persons with no taxable income, 50 p.c. for persons with taxable income from \$1 to \$500, and 25 p.c. for persons with taxable income from \$501 to \$1,000. All residents may insure for medical services either through the doctor-sponsored Medical Services (Alberta) Incorporated or through approved agencies; doctors are reimbursed at 90 p.c. of their assessed fees by the former or at 100 p.c. by the latter. In October 1965, an estimated 850,000 persons were covered by the Plan, or 59 p.c. of the provincial population. Of these, about 187,000, or 13 p.c. of the provincial population, were covered by subsidized insurance contracts.

On July 1, 1966 the Alberta Health Program came into effect; it comprises the Alberta Medical Plan and the new Extended Health Benefits Plan. The latter makes available, through approved companies and with premium-subsidy rates equal to those under the Alberta Medical Plan, insurance for many additional health services, including prescribed drugs, optometry, physiotherapy, psychology, ambulance, osteopathy, chiropractic, podiatry, naturopathy, and various medical supplies and appliances. A deductible amount and a co-insurance charge or limited liability on some services apply to the new Plan.

The British Columbia Medical Plan took effect Sept. 1, 1965. The Plan, an agency directed by representatives of the government and the medical profession, makes available to all provincial residents insurance that provides most physician's services, as well as limited physiotherapy, special nursing, chiropractic and naturopathic services. To persons resident in the province for the preceding 12 months, the government offers subsidies of 90 p.c. of the premium for those with no taxable income and of 50 p.c. for those with taxable income from \$1 to \$1,000. Annual premiums are \$60 for a single person, \$120 for a family of two, and \$150 for a family of three or more persons. The government pays \$2,000,000 annually to a Medical Grant Stabilization Fund in order to cover any deficit. In February 1966, more than 198,000 persons were covered under the Plan and 67 p.c. of the insurance contracts were subsidized.

The Ontario Medical Services Insurance Plan began paying benefits July 1, 1966. The Plan offers to all Ontario residents insurance that covers most physician's services.

Subsidies are available to certain persons resident in the province for the previous 12 months. The government will pay the full premium of applicants who had no taxable income during the preceding year and of recipients of public assistance, and it will pay 50 p.c. of the premium for single applicants who had taxable income in the preceding year of \$500 or less, for married applicants with one dependant whose taxable income in the preceding year was \$1,000 or less, and for married applicants with two or more dependants whose taxable income was \$1,300 or less. Premiums have been set at \$60 for a single person, \$120 for a family of two, and \$150 for a family of three or more. The Plan is administered by the Department of Health and a Medical Services Insurance Council, representing the public and the medical profession, advises the Minister on its operation.

**Programs for Public Assistance Recipients.**—For several years, Nova Scotia, Ontario, Manitoba, Saskatchewan, Alberta and British Columbia have operated programs providing certain personal health care services for specified categories of welfare recipients. In 1966, Quebec commenced a program providing comprehensive physician's services to recipients of public assistance. Medical care benefits for recipients of assistance in Saskatchewan and Ontario are now administered through the public medical care schemes set up in those provinces.

In Quebec, Ontario, Saskatchewan, Alberta and British Columbia coverage extends to virtually all recipients of provincial aid, including persons receiving needs-tested supplements to old age security pensions (a special means test for health care enrolment is used in Ontario), recipients of old age assistance, mothers' allowances and their dependants, disabled persons' allowances, blindness allowances, general welfare assistance and, in some provinces, child wards, vocational rehabilitation recipients and short-term welfare recipients. Manitoba covers aged and infirm persons requiring custodial care, recipients of blind persons' allowances and recipients of mothers' allowances and their dependants. Nova Scotia enrolls only blindness allowance recipients and mothers' allowance recipients and their dependants. All provincial programs provide comprehensive physician's services, including medical attendance in the home, office and hospital, surgery, diagnostic services and obstetrical care. Some limitations on billing for certain physician's services, such as surgery and hospital visits, exist in Nova Scotia.

Dental and optical care benefits are provided to all covered recipients in the four westernmost provinces, sometimes only on special authorization and/or with dollar limits. Ontario finances a program of dental care for the children of mothers' allowance recipients. Other services provided in some provinces include orthopedic appliances, physiotherapy, chiropody, chiropractic treatment, home nursing and transportation for medical reasons.

Recipients of public assistance in Newfoundland who are individually certified by the welfare officer in their area as being unable to meet their medical care payments can be given free service, including comprehensive medical service, out-patient drugs and dressings, prosthetic appliances, transportation to and from hospital, dental care where available, and eye refractions and glasses.

**Programs for Other Selected Groups.**—Under the Cottage Hospital Plan, in about 18 rural cottage hospital districts, Newfoundland pays for subscribers' medical care in the home, doctor's office and out-patient clinic or cottage hospital, as well as specialist care not available in the local area but secured in St. John's, Grand Falls or Corner Brook upon referral by the local doctor or nurse. Premiums charged vary according to district from \$6 to \$24 for a family and from \$3 to \$12 for a single person. Physicians in cottage hospital districts are paid a full-time salary which varies with the size of district, level of responsibility, years of experience and other factors. In 1964, about 205,000 persons were eligible under the program, or 42 p.c. of the provincial population. In three additional rural areas, the government subsidizes the costs of voluntary organizations that employ doctors and provide comprehensive services to area residents upon payment of a premium of \$10 for a family or \$5 for a single person. These plans cover 51,000 persons, or 10 p.c. of the population.

Newfoundland also has a partially universal program—the Children's Health Service—financed out of general revenues, which automatically covers all children under 16 years of age for in-hospital medical and surgical care, anaesthesia and special consultations. For services rendered, physicians are paid approximately 80 p.c. of the fees of the Newfoundland Division of the Canadian Medical Association. The Children's Health Service covers 218,000 children but, of these, some 113,000 reside in districts covered by the cottage hospital and voluntary schemes described in the preceding paragraph.

### Subsection 5.—Services for the Disabled and Chronically Ill

Physical medicine and rehabilitation departments have been established in most teaching, veterans' and children's hospitals. Complementing these are some 48 independent rehabilitation centres, including 27 children's centres and four workmen's compensation centres. Hospital services available to in-patients and out-patients include physical medicine, physiotherapy, occupational therapy and social services; most of the children's hospitals and the teaching hospitals also supply speech therapy. The rehabilitation centres provide comprehensive medical, psychosocial and vocational services to more severely disabled persons who require intensive or long-term therapy. In addition, the children's hospitals and centres operate special education classes. Provincial and community agencies such as those providing vocational rehabilitation and home care services co-operate in the rehabilitation of disabled children and adults.

Most large general hospitals conduct special out-patient clinics for disabilities such as arthritis and rheumatism, diabetes, glaucoma, speech and hearing defects, heart diseases, orthopedic and neurological conditions. Voluntary agencies, which are concerned with specific disability groups such as arthritics, the blind, the deaf, children suffering from cystic fibrosis, haemophilia or muscular dystrophy, the mentally ill or retarded, or disabled persons generally, are also broadening their rehabilitation services. These agencies provide such services as counselling, the supply of personal aids and appliances, employment and education, and sheltered workshops and also participate in the provision of services for the homebound. More than 150 sheltered workshops were in operation in 1965, serving handicapped persons. Organized home care programs, under either hospital or community sponsorship, have been established in the principal cities, providing nursing, homemaker, physiotherapy and other services to the disabled, the chronically ill and the aged in their own homes. Several provincial health departments have instituted home nursing services to residents of outlying districts.

Provincial health, welfare and education departments and voluntary agencies are developing specialized services for physically and mentally handicapped children. Most provinces have established registries of handicapped children of varying coverage in co-operation with physicians, health units, hospitals and other agencies. Such registries, which are increasingly useful sources of morbidity statistics including congenital anomalies, assist in the planning and co-ordination of rehabilitation services. In addition, health departments and the crippled children's societies provide family counselling, recreation, transportation and foster-home care; travelling clinics extend services to outlying areas. Special schools or classes for handicapped children are operated by local school boards in the main cities but most of the 10 residential schools for the deaf and the six for the blind are operated by the provincial education departments.

The Federal Government, through its National Health Grants (see p. 280), assists the provinces in their programs to develop medical rehabilitation services and facilities, to support the training of medical rehabilitation personnel (through grants to university schools and student bursaries), to provide equipment and to finance research. Three regional prosthetic research and training units in rehabilitation centres in Montreal, Toronto and Winnipeg and the Bio-Engineering Institute of the University of New Brunswick are supported by National Health Grants. These three regional centres and several juvenile amputee clinics in other cities are rehabilitating children with limb deformities or amputations. A federal-provincial program assists in the extraordinary rehabilitation,

maintenance and counselling costs on behalf of children with thalidomide-induced defects. The transfer of the prosthetic service for veterans to the Department of National Health and Welfare on Jan. 1, 1966, makes it possible for the provinces to extend these services to non-veterans.

### Section 3.—Hospital and Other Health Statistics

Statistical information on the health of Canadians is at present limited to the well established and highly standardized mortality, communicable disease and institutional statistics series, all of which have been available for a long period, and the recently established series covering operations under the federal-provincial hospital insurance program (pp. 281-284). Much statistical information is also available from provincial and other health sources.

Statistics on causes of death are given in the Chapter on Vital Statistics, pp. 255-258; those on hospital statistics in Subsection 1 following; and those on notifiable diseases in Subsection 2.

#### Subsection 1.—Hospital Statistics\*

Hospitals in Canada are grouped into two categories for statistical purposes—first according to ownership, i.e., public, private or federal, and second by type of service provided, i.e., general, allied special (which includes chronic, convalescent, rehabilitation, maternity, communicable disease and orthopedic hospitals), mental and tuberculosis. General hospitals, which account for the majority of beds, are further divided into size groupings in accordance with their rated bed capacity.

As shown in Table 5, the 1,452 hospitals of all types in operation in Canada during 1965 had a combined rated bed capacity of 210,367. The ratio of beds per 1,000 population, at 10.7, was slightly higher than in 1964. General hospitals accounted for 54.1 p.c. of the total rated beds, the provincial ratio ranging from 4.9 in Quebec to 7.2 in Saskatchewan; mental hospitals accounted for 32.5 p.c. of the rated beds, allied special hospitals for 10.2 p.c. and tuberculosis sanatoria for 3.2 p.c.

\* Prepared in the Institutions Section of the Health and Welfare Division, Dominion Bureau of Statistics. Detailed information will be found in the following DBS publications: *Hospital Statistics, Vols. I to VII* (Catalogue Nos. 83-210 to 83-216); *Mental Health Statistics, Vol. III* (Catalogue No. 83-205); *Tuberculosis Statistics, Vol. II* (Catalogue No. 83-207); and *List of Canadian Hospitals and Related Institutions and Facilities* (Catalogue No. 83-201).

<sup>1</sup> Based on estimated population as at June 1, 1965.<sup>2</sup> Mental hospitals only; exclusive of psychiatric units in other hospitals.<sup>3</sup> Tuberculosis hospitals only; exclusive of tuberculosis units in other hospitals.

Although 1965 figures on type of hospitals in operation and their rated bed capacities (Tables 5 and 6) were available for 1965 at the time of preparation of this Subsection, the most recent data obtainable for Tables 7 to 13 were for 1964.

The number of adults and children admitted to all hospitals in 1964 was 3,174,490, or 165 per 1,000 population compared with 164 in 1963; admissions to general hospitals numbered 3,020,070, or 157 per 1,000 population. The average number of persons in hospital on any particular day during 1964 was 179,700, compared with 177,300 in 1963, with general hospitals accounting for 88,500 and mental hospitals for 69,100. Occupancy rates varied according to type of hospital, being highest in public mental (106.4 p.c.) and lowest in tuberculosis (public 72.2 p.c. and private 71.9 p.c.). The occupancy rate in the largest group of hospitals—public general—decreased in 1964 to 80.8 p.c. from 81.4 p.c. in 1963.

<sup>1</sup> Adults and children.

<sup>2</sup> Population estimates as at June 1.

<sup>3</sup> Based on rated bed capacity.

<sup>4</sup> Mental hospitals only; does not include psychiatric units in other hospitals.

<sup>5</sup> Tuberculosis hospitals only;

Average length of stay of adults and children separated from public hospitals in 1964 was 11.5 days, the same as in 1963. The length of stay was considerably longer in chronic, convalescent and rehabilitation hospitals (151 days) than in general hospitals because of the nature of service provided. In public general hospitals, length of stay was 10.2 days (the same as in 1963), and ranged from 7.2 days in hospitals of 10-24 beds to 14.1 days in those with 1,000 or more beds. The availability of specialized and referral services in the larger hospitals has a tendency to increase the average duration of stay.

Total full-time personnel employed in all Canadian hospitals in 1964 was estimated at 259,900, an increase of 4.6 p.c. over 1963. The ratio of full-time personnel per 100 rated beds amounted to 166.7 in general and allied special hospitals, 55.2 in mental hospitals and 82.1 in tuberculosis sanatoria. Analysis of general hospitals on a provincial basis reveals that the number of full-time employees per 100 rated beds ranged between 131.1 in Prince Edward Island and 210.6 in Quebec.

<sup>1</sup> Mental hospitals only; exclusive of psychiatric units in other hospitals.

<sup>2</sup> Tuberculosis hospitals only;

exclusive of tuberculosis units in other hospitals.

In 1964, paid hours of work by personnel in public hospitals per patient-day of care amounted to 12.7 hours; in private hospitals 6.3 hours; and in federal hospitals 9.5 hours. Paid hours of work by public general hospital personnel per patient-day of care was 13.6 hours, slightly higher than the 13.2 hours recorded in 1963. Hospitals with 1,000 or more beds averaged 16.0 hours per patient-day compared with 9.2 hours for hospitals in the 10-24 bed range.

Total income of all public hospitals amounted to \$1,148,000,000 in 1964, an increase of 10.8 p.c. over the previous year. Most of the revenue was derived from net in-patient earnings, varying in proportion from 74.7 p.c. for mental hospitals to 94.2 p.c. for maternity hospitals. Total expenditures for 1964 were \$1,194,000,000, a rise of 10.8 p.c. over the 1963 total. Gross salaries and wages were the principal component, representing 64.3 p.c. of the total in general hospitals. Cost per patient-day of care in general hospitals advanced to \$31.00, or 8.5 p.c. over the previous year. Costs were directly related to size of hospital, increasing from \$22.19 in 10-24 bed hospitals to \$38.02 in the largest hospitals. Among the provinces, general hospitals in Prince Edward Island recorded the lowest cost per patient-day (\$22.76), and Quebec hospitals showed the highest (\$36.06).

## Subsection 2.—Notifiable Diseases and Other Health Statistics\*

**Notifiable Diseases.**—Three categories on the notifiable list established by the Dominion Council of Health continued to predominate in 1964: venereal diseases (23,401 cases), scarlet fever and streptococcal sore throat (10,605), and infectious and serum hepatitis (8,218). Together they accounted for about 73 p.c. of all new cases reported.

Since 1959, when the rate reached a high of 133.9 per 100,000 population, the incidence of scarlet fever and streptococcal sore throat has been declining, although the 1964 rate was slightly higher than that for 1963. In contrast, the rate of venereal disease notifications has risen from 97.3 per 100,000 population in 1959 to 121.7 in 1964. The incidence of viral hepatitis, after climbing alarmingly from a high of 29.9 per 100,000 population in the 1950s to 67.5 in 1961 and 1962, declined in 1964 to a level roughly midway between.

The incidence of poliomyelitis has shown the effects of control by the use of the Salk vaccine introduced in 1955 and the Sabin vaccine in 1962. In 1953, the year of highest incidence, there were 3,912 reported paralytic cases and 494 deaths compared with only 19 cases in all in 1964.

To indicate a crude death rate from communicable diseases in general, and the relationship between deaths from such diseases and deaths from all causes, the following notifiable diseases have been combined: diphtheria, malaria, measles, pertussis, scarlet fever and streptococcal sore throat, smallpox, tuberculosis, typhoid fever, typhus and other rickettsial diseases. Since 1947, when the death rate for these selected notifiable diseases was 49.5 per 100,000 population, the rate declined steadily to 21.0 in 1952, to 6.9 in 1958 and to 4.0 per 100,000 population in 1964.

\* Prepared in the Public Health Section, Health and Welfare Division, Dominion Bureau of Statistics.

**Subsection 3.—Numbers of Physicians and Earnings of Those in Private Practice**

**Numbers.**—According to a survey conducted by the Department of National Health and Welfare, there were 21,011 active civilian physicians in Canada in 1962; the 1962 ratio of 881 persons per physician continues the postwar trend of improvement in physician supply. Table 16 shows the historical trend since 1901 and the provincial distribution for 1962. The ratio of 748 persons per physician for British Columbia in the latest year is the most favourable supply yet achieved by a Canadian province.

**16.—Active Civilian Physicians and Population per Physician, 1901-62, and by Province, 1962**

Year	Active Civilian Physicians		Province or Territory	Active Civilian Physicians

<sup>1</sup> Includes 63 not allocated by province.

Table 17 shows that the physicians of Canada are more highly concentrated in the larger centres of population than is the population generally, and that this concentration has been increasing for both the total population and physicians. In addition, the percentage increase of the 1962 total of physicians in centres of fewer than 10,000 population over that for 1951 was less (5.8) than the percentage increase over 1951 of the 1959 total in these areas (11.9), indicating a decrease in the total number of physicians in these areas during the 1959-62 period. Although the trends indicated in these data are slightly exaggerated by changes between censuses in the make-up of census metropolitan areas, it is clear that there is an over-all widening of the traditional disparity in availability of physician services between smaller localities and large urban centres.

**17.—Percentages of Population and of Active Civilian Physicians in Centres of Over or Under 10,000 Population and Percentage Increases Over 1951**

Item	Percentages of Total			Percentage Increases Over 1951		
	In Centres of—		Total	For Centres of—		Total
	10,000 or Over Population	Under 10,000 Population		10,000 or Over Population <sup>1</sup>	Under 10,000 Population	
<b>Population—</b>						
1951.....	48.2	51.8	100.0	...	...	...
1961.....	57.7	42.3	100.0	55.9	6.3	30.2
<b>Physicians—</b>						
1951.....	73.2 <sup>2</sup>	26.8	100.0	...	...	...
1954.....	73.7 <sup>2</sup>	26.3	100.0	12.3	9.3	11.5
1959.....	78.2 <sup>3</sup>	21.8	100.0	46.8	11.9	37.4
1962.....	81.0 <sup>4</sup>	19.0	100.0	64.6	5.8	48.8

<sup>1</sup> Includes all parts of census metropolitan areas, regardless of size.

<sup>2</sup> Size of place as in 1956 Census.

<sup>3</sup> Size of place as in 1961 Census.

<sup>4</sup> Size of place as in 1951 Census.

There has been little real change in recent years in the proportion of active civilian physicians who are engaged primarily in private practice; in 1951 it was 72.3 p.c., in 1959 an estimated 74.0 p.c. and in 1962 an estimated 73.4 p.c. The remainder were engaged in "other work" or were "interns, residents and fellows". In the 1959-62 period, however, a trend toward specialization was indicated by the rising proportion of specialists in private practice from 29.1 p.c. to 35.7 p.c. and of specialists in other work from 10.8 p.c. to 12.9 p.c. On the other hand, the proportion of physicians in general private practice dropped from 43.2 p.c. to 37.7 p.c. and of non-specialists in other work from 8.5 p.c. to 4.7 p.c. The increase from 8.3 p.c. to 9.0 p.c. in the proportion of physicians who were interns, residents and fellows is also indicative of increased specialization and the longer training period involved.

**Earnings.**—More than 98 p.c. of the earnings of privately practising physicians and surgeons in Canada were obtained from fees charged for individual items of professional service. As Table 18 shows, average gross earnings in 1964 from fees plus wages and salaries earned incidental to fee practice were \$30,409. This figure was 7 p.c. higher than in 1963 and 38 p.c. above the 1958 figure. The highest average gross earnings in 1964 were reported in Saskatchewan at \$36,484; in Ontario, Alberta and British Columbia they were above the national average. Average gross incomes in the remaining provinces ranged downward from \$27,922 in Manitoba to \$23,088 in Newfoundland. Generally, throughout the seven-year period 1958-64, highest average gross earnings have been most consistently reported in Ontario and the westernmost provinces.

The net returns to doctors, after deduction of the expenses of professional fee practice, reveal similar geographic patterns, as seen in Table 18. Net earnings for Canada as a whole averaged \$20,374 in 1964, 9.6 p.c. higher than in 1963 and 48 p.c. above the 1958 figure. The highest provincial average net income was reported by Saskatchewan doctors at \$23,879 followed by Ontario doctors at \$22,247. The lowest average net income was reported in Prince Edward Island.

## PART II.—PUBLIC WELFARE AND SOCIAL SECURITY

Responsibility for social welfare is shared by all levels of government. Comprehensive income-maintenance measures such as the Canada Pension Plan, old age security pensions, family allowances, youth allowances and unemployment insurance, where nation-wide co-ordination is required, are administered federally. The Federal Government gives substantial aid to the provinces in meeting the costs of public assistance and also provides services for special groups such as veterans, Indians, Eskimos and immigrants. The Department of National Health and Welfare is generally responsible for federal welfare matters although the Departments of Veterans Affairs, Indian Affairs and Northern Development and Manpower and Immigration operate the special programs.

Administration of welfare services is primarily the responsibility of the provinces but the provision of services is often assumed by local authorities, generally with financial aid from the province.

Co-ordination in welfare matters between different levels of government and between government and voluntary authorities is facilitated by the National Council of Welfare, an advisory body to the Minister of National Health and Welfare. The Council consists of the federal Deputy Minister of Welfare who acts as chairman, the provincial deputy ministers of welfare, and ten other persons appointed for three-year terms by the Governor in Council.

### Section 1.—Federal Government Programs

#### Subsection 1.—Canada Pension Plan

The Canada Pension Plan, established under legislation enacted in 1965, is an important new component in Canada's social security system. The Plan is designed to provide, for members of the labour force, an organized program whereby each contributor builds up a right to a retirement pension, the amount of which is related to his previous earnings pattern. It also provides benefits to a disabled contributor and his dependent children and, at the contributor's death, a lump-sum death benefit together with monthly benefits for his widow and children. The Plan, together with its Quebec counterpart, will apply to about 92 p.c. of the Canadian labour force. Employees who earn \$600 or less in a calendar year or self-employed persons who earn less than \$800 do not pay contributions for that year. The collection of contributions began in January 1966.

The Canada and Quebec Pension Plans are closely co-ordinated and operate together as one and the same Plan. If an employee covered by the Canada Pension Plan takes employment in Quebec, or if a self-employed person moves his residence to that province, his contributions to the Quebec Pension Plan will produce the same benefits as if they had been made to the Canada Pension Plan. The reverse also applies.

The Canada Pension Plan is financed by contributions of employees, employers and self-employed persons and by interest earned by the fund. On earnings above \$600, which amount is exempt from contributions, and up to the present maximum on pensionable earnings of \$5,000 a year, the employee contributes 1.8 p.c. and his employer pays a matching amount. Self-employed people contribute at the combined rate of 3.6 p.c., also on annual earnings between \$600 and \$5,000. The contributory limits will be adjusted with changing economic conditions. The initial limits of \$600 and \$5,000 will prevail for the first two years of the Plan; for the next eight years these limits will be adjusted by means of a Pension Index which will reflect increases in the Consumer Price Index; after 1975, they will be adjusted according to changes in an Earnings Index which will be based on a long-term moving average of national wages and salaries. Retirement pensions under the Plan will come into effect according to the following staging: in 1967, retired contributors age 68 or over will be able to claim retirement pensions; in 1968, those who are age 67 or over can do so; in 1969, the eligible age will be 66 or over; and in 1970 and afterward, contributors age 65 or over will be eligible.

A retirement pension will be 25 p.c. of a contributor's average pensionable earnings, which will include the earnings on which contributions were made and also the \$600 exemption. In calculating a contributor's pension, his earnings for each year will be adjusted so that they will bear the same relationship to the maximum pensionable earnings in force at the time the pension begins that his earnings bore to the upper limit prevailing in the year in which they were actually received. His total adjusted pensionable earnings will be averaged over the entire period from the commencement of the program on Jan. 1, 1966, or from age 18 whichever is later, to the date the pension is first paid, but in no case will they be averaged over less than 120 months, unless a disability pension has been paid to the contributor in the interim. During the first ten years of the program, partial retirement pensions are payable; pensions become payable at full rates in 1976.

After 1975, certain periods of low earnings, or no earnings at all, can be disregarded in determining the average earnings on which retirement pensions are to be based. Contributory earnings received between ages 65 and 70 can be substituted for lower or no earnings of earlier periods of the same duration. In addition, 15 p.c. of the contributory period then remaining is dropped out, providing that the reduced period is not less than 120 months. These drop-out provisions make it possible for the person to receive a higher pension than would otherwise be the case.

A retirement pension is payable at any time between the ages of 65 and 70, provided the contributor has then retired from regular employment. If he earns up to \$900 a year, he is considered as having been retired for purposes of applying for his pension. Those taking up new employment after starting to draw a retirement pension will be required to pass an earnings test. For earnings between \$900 and \$1,500 in any year, the pension will be reduced by one half of the difference between the actual earnings and \$900, the maximum reduction in this range being \$300. When earnings exceed \$1,500, the retirement pension will be reduced by \$300 plus all earnings in excess of \$1,500. However, no reduction will be made in the pension for any month in which the pensioner's earnings are \$75 or less, no matter what his earnings are for the entire year. The pension is payable at the full rate when the person attains age 70, regardless of earnings.

Pensions for disabled contributors\* and for their dependent children will first be payable in the spring of 1970. Survivors' benefits, including pensions for widows and disabled widowers,\* orphans' benefits and the death benefit will first be payable early in 1968.

A contributor who becomes disabled after making contributions for the required period of time will be entitled to a disability pension consisting of a flat-rate component, initially \$25 monthly, and an earnings-related component amounting to 75 p.c. of a retirement pension, calculated as if he had then reached 65 years of age. In calculating this pension, earnings are averaged over the period from age 18 or Jan. 1, 1966 whichever is later, until the date the disability pension becomes payable, the minimum period for averaging being 60 months. In addition, benefits will be payable for the dependent children of a disability pensioner; that is, on behalf of unmarried children under age 18, or up to age 25 if in full-time attendance at school or university. The monthly rate is \$25 for each of the first four eligible children and \$12.50 for each additional child.

A widow age 45 to 64 at her husband's death, a disabled widow\* under age 65, and a widow under age 65 with dependent children will be entitled to a widow's pension if her husband has made the required number of contributions. It consists of a flat-rate component, initially \$25 a month, and an earnings-related component equal to 37.5 p.c. of the retirement pension payable to her deceased husband. If he was under age 65 at the time of his death the pension is calculated as if he had actually attained age 65 at that time. A widow who is not disabled and who does not have dependent children receives a reduced pension if she is under age 45 at the death of her husband; if she is under age 35 no widow's pension is payable until she reaches 65 years of age unless she becomes disabled in the interim.

\* A contributor, a widow or a widower is considered disabled if he or she has a physical or mental disability so severe and likely to continue so long that he cannot get steady work.

Benefits payable for the children of a deceased contributor are the same as those provided for the dependent children of a disabled pensioner.

A woman widowed at age 65 or over or a widow reaching age 65 will receive a pension of 60 p.c. of her husband's retirement pension. If the husband was under age 65 when he died, his retirement pension is calculated as if he had then attained age 65. For widows age 65 or over who will also be entitled to retirement pensions of their own, two alternative formulae are provided for the re-calculation of their widow's pension, so that they may receive the more advantageous amount.

A pension is provided for the disabled widower\* of a contributor if he was disabled at the time of his wife's death and was, at that time, wholly or substantially maintained by her. The rate of his pension is the same as that for a woman widowed between age 45 and 65. For a disabled widower reaching age 65, or for a person becoming a disabled widower after age 65 the rate of pension is the same as for a widow of the same age. A disabled widower entitled to his own retirement pension is also provided with two alternative formulae for purposes of calculating his total retirement income. He must continue to prove disability for the duration of his pension.

A lump sum death benefit is payable subject to the same qualifying conditions as pertain to other survivors' benefits. The amount of the benefit is six times the monthly retirement benefit that is being (or would be) paid to the contributor in the month of his death, but cannot exceed 10 p.c. of the maximum on pensionable earnings for that year. If the contributor is under 65 years of age when he dies, the retirement pension will be calculated as if he were 65 at the date of death.

Canada Pension Plan benefits, once they have commenced to be paid, will be subject to annual adjustments in accordance with upward changes in the Pension Index. Benefits are payable no matter where the beneficiary may live, whether in Canada or any other country.

The Department of National Health and Welfare administers the Canada Pension Plan through its head office in Ottawa and District Offices located in various centres across Canada. Contributions are collected by the Department of National Revenue. Employers are responsible for making deductions of contributions from their employees' earnings and for remitting these, along with their own matching contributions, to the Department of National Revenue. Self-employed persons make payments directly at the time such people normally pay their income tax. Everyone covered by the Plan must obtain a Social Insurance Number in order to identify and maintain his individual Record of Earnings. Even if a person does not obtain a number, he is still required to make contributions and any earnings received before a number is obtained may not be taken into account when calculating that individual's pension.

Appeals in connection with coverage and contributions may be made to the Minister of National Revenue. If an employee is not then satisfied, he may appeal further to the Pension Appeals Board whose decision is final. A self-employed contributor follows the appeal procedures of the Income Tax Act. With regard to benefits, there is a three-stage appeal procedure: first, to the Minister of National Health and Welfare; secondly, to a Review Committee; and thirdly, to the Pension Appeals Board whose decision is final and binding.

Contributions to the Plan, other than those required for immediate administrative costs and payment of benefits, may be borrowed by a provincial government on the basis of the relationship between contributions by residents of that province and all contributions at rates of interest determined in accordance with the legislation. Provision is made for the establishment of an advisory committee to review the operation of the Act, the state of the investment fund, and the adequacy of the coverage and benefits provided under the legislation. The legislation provides authority whereby the government may enter

\* See footnote, p. 310.

into reciprocal arrangements with other countries where there is a common interest in as full coverage as possible and in the portability of pensions and where mutually satisfactory agreements can be reached.

### Subsection 2.—Old Age Security

Under the Old Age Security Act of 1951, as amended, a universal pension of \$75 a month is payable by the Federal Government to all persons who meet the residence and age qualifications. Until 1965, the pension was payable to those age 70 or over but in 1966 it is payable to persons age 69 or over, in 1967 to those age 68 or over, and so on until by 1970 it will be payable to everyone age 65 or over. In 1968 and succeeding years, the amount of the pension will be adjusted in line with changes in the Pension Index developed for the Canada Pension Plan (see p. 309).

The old age security pension is payable to a person of attained age who has resided in Canada for ten years immediately preceding his application for the pension. Any gaps in the ten-year period may be offset if the applicant had resided in Canada in earlier years for periods of time equal in total to double the length of the gaps; in this case, however, the applicant must also have resided in Canada for one year immediately before his application for pension. The pension is also payable to persons of attained age who have left Canada before reaching that age but who have had 40 years of residence in Canada since age 18. A pensioner may absent himself from Canada and continue to receive payments. If he has lived in Canada for 25 years since his 21st birthday, payment outside of Canada may continue indefinitely; if not, payment is continued for six months, in addition to the month of departure, and is then suspended, to be resumed only with the month in which he returns to Canada.

The program is administered by the Department of National Health and Welfare through regional offices located in each provincial capital, to which application is made for pension. It is financed through a 3-p.c. sales tax, a 3-p.c. tax on corporation income and, subject to a limit of \$120 a year, a 4-p.c. tax on taxable personal income.

### Subsection 3.—Family Allowances

The Family Allowances Act of 1944 is designed to assist in providing equal opportunity for all Canadian children. The allowances do not involve a means test and are paid from the federal Consolidated Revenue Fund. They do not constitute taxable income but there is a smaller income tax exemption for children eligible for allowances.

Allowances are payable in respect of every child under the age of 16 years who was born in Canada, or who has been a resident of the country for one year, or whose father or mother was domiciled in Canada for three years immediately prior to the birth of the child. Payment is made by cheque each month, normally to the mother, although any person who substantially maintains the child may be paid the allowance on his behalf. Allowances are

paid at the monthly rate of \$6 for each child under 10 years of age and \$8 for each child age 10 or over but under 16 years. If the allowances are not spent for the purposes outlined in the Act, payment may be discontinued or made to some other person or agency on behalf of the child. Allowances are not payable for any child who fails to comply with provincial school regulations or on behalf of a girl who is married and under 16 years of age.

The program is administered by the Department of National Health and Welfare through regional offices located in each provincial capital. The Regional Director located at Edmonton also administers the accounts of residents in the Yukon and Northwest Territories.

The Federal Government pays family assistance, at the rates applicable for family allowances, for each child under 16 years of age resident in Canada and supported by an immigrant who has landed for permanent residence in Canada, or by a Canadian returned to Canada to reside permanently. The assistance, which is payable monthly for the first year of the child's residence in Canada, is intended to bridge the gap until the child becomes eligible for family allowances.

## Subsection 4.—Youth Allowances

Legislation providing for a program of youth allowances became effective Sept. 1, 1964. The Federal Government does not provide youth allowances in Quebec, which has its own program, but that province is compensated by a tax abatement adjusted to equal the amount that the Federal Government would otherwise have paid in allowances to Quebec residents.

Under the federal program, monthly allowances of \$10 are payable in respect of all dependent youths age 16 and 17 who are receiving full-time educational training or are precluded from doing so by reason of physical or mental infirmity. Both the parent or guardian and the youth must normally be physically present and living in a province other than Quebec. The allowance is not payable to a parent who resides in Quebec or outside Canada, regardless of where his child may be attending school. However, a dependent youth may attend school in Quebec or outside Canada, or, if disabled, receive care or training in Quebec or outside Canada and still be considered eligible, on the basis that he is a resident of a province other than Quebec but is temporarily absent.

Allowances normally commence with the month following that in which family allowances cease and continue until the school year terminates. They are paid retroactively for the summer months when the youth returns to school at the commencement of the new school year. Allowances for a disabled child not attending school, however, are payable continuously throughout the year. Should the youth leave school, leave the country permanently, cease to be maintained, take up residence in Quebec, or die, the allowance will cease. Otherwise, the youth allowance continues until the end of the month in which the youth reaches age 18. Youth allowances are considered not to be income for any purpose of the Income Tax Act.

The program is administered by the Department of National Health and Welfare. The National Director of the family allowances and old age security programs also administers youth allowances, assisted by regional directors located in each of the provincial capitals other than Quebec City. The costs of youth allowances are met from the Consolidated Revenue Fund.

## Section 2.—Federal-Provincial Programs

### Subsection 1.—Canada Assistance Plan

The Canada Assistance Plan, a comprehensive public assistance measure to complement the provisions of the Canada Pension Plan, which received Royal Assent on July 15, 1966 (SC 1966, c. 45), will provide a single administrative framework for federal sharing with the provinces in costs of assistance and of welfare services. It is designed to replace the four existing programs of unemployment assistance, old age assistance, blind persons' allowances and disabled persons' allowances but the provinces will have the option of continuing separate administration of the categorical programs, and the provision for contracting out that now applies to the four programs under the Established Programs (Interim Arrangements) Act will extend to the Canada Assistance Plan.

The Plan authorizes the Federal Government to enter into an agreement with any province to share, on an equal basis, the costs of assistance to persons in need and of improving or extending welfare services. From Apr. 1, 1966, the Plan will cover those costs shared under the Unemployment Assistance Act (see p. 317) and will extend federal sharing to the following costs: assistance to needy mothers with dependent children, maintenance of children in the care of provincially approved child welfare agencies, health care services to needy persons, and extension of welfare services to prevent and remove causes of poverty and to assist persons receiving assistance to achieve the greatest possible degree of self-support. The only eligibility requirement is that of need, irrespective of the cause of need and without reference to employment status. Need is to be determined by a needs test. No residence requirements are specified and a province may not require a period of previous residence in the province as a condition of eligibility for assistance or for continued assistance. No maximum amounts of assistance are set and rates and conditions of aid are set by the provinces. The resulting flexibility will enable the provinces to adjust rates to local conditions and to take into account the needs of special groups by providing a differential in benefits or conditions of eligibility.

The costs of improving or extending welfare services, for the purposes of federal reimbursement, may be calculated either as the amount by which the cost, to the province and the municipalities, of providing welfare services exceeds the cost in the base year ended Mar. 31, 1965, or as the cost, to the province and the municipalities, of employing persons who are engaged wholly or mainly in the performance of welfare service functions and who are employed in positions filled after Mar. 31, 1965. At the option of the province, separate agreements may be entered into providing for the sharing of costs of work activity projects to prepare persons in need for entry or return to employment and for the sharing of costs of extensions of provincial welfare services to Indians on reserves, Crown lands or in unorganized territory. The former agreement would cover 50 p.c. of certain operating and maintenance costs; the latter may provide for a federal contribution in excess of 50 p.c.

### Subsection 2.—Old Age Assistance

The Old Age Assistance Act of 1951, as amended, provides for federal reimbursement to the provinces for assistance to persons age 65 or over who are in need and who have resided in Canada for at least ten years or who, if absent from Canada during this period, have been present in Canada prior to the commencement of the ten-year period for double any period of absence during the ten years. A pensioner is transferred to old age security on reaching the eligible age for it. The federal contribution may not exceed 50 p.c. of \$75 a month or of the assistance paid, whichever is less. The province administers the program and, within the limits of the federal Act, may fix the amount of assistance payable, the maximum income allowed and other conditions of eligibility. Effective Apr. 1, 1965, Quebec withdrew from this federal-provincial program under the Established Programs (Interim Arrangements) Act, which entitles the province to a tax abatement as an equalization payment.

For an unmarried person, total income allowed, including assistance, may not exceed \$1,260 a year. For a married couple it may not exceed \$2,220 a year or, when the spouse is blind within the meaning of the Blind Persons Act, \$2,580 a year. Assistance is not paid to a person receiving an old age security pension or an allowance under the Blind Persons Act, the Disabled Persons Act, or the War Veterans Allowance Act.

Recipients of old age assistance who are in need may receive supplementary aid under general assistance programs in the provinces. In certain circumstances, the Federal Government may share in such aid under the Unemployment Assistance Act (see p. 317).

#### 4.—Old Age Assistance Statistics, by Province, Year Ended Mar. 31, 1966 with Totals for 1964-66

<sup>1</sup> Effective Apr. 1, 1965, assistance ceased to be paid to Quebec (see on p. 315).

<sup>2</sup> Excludes Quebec.

#### Subsection 3.—Allowances for Blind Persons

The Blind Persons Act of 1951, as amended, provides for federal reimbursement to the provinces for allowances to blind persons age 18 or over who are in need. The federal contribution may not exceed 75 p.c. of \$75 a month or of the allowance paid, whichever is less. The province administers the program and, within the limits of the federal Act, may fix the amount of allowance payable and the maximum income allowed. Effective Apr. 1, 1965, Quebec withdrew from this federal-provincial program under the Established Programs (Interim Arrangements) Act, which entitles the province to a tax abatement as an equalization payment.

To qualify for an allowance a person must meet the required definition of blindness and have resided in Canada for ten years immediately preceding commencement of allowance or, if absent from Canada during this period, must have been present in Canada prior to its commencement for a period equal to double any period of absence during the period. For an unmarried person, total income including the allowance may not exceed \$1,500 a year; for a person with no spouse but with one or more dependent children, \$1,980; for a married couple, \$2,580. When the spouse is also blind, income of the couple may not exceed \$2,700. Allowances are not payable to a person receiving assistance under the Old Age Assistance Act, an allowance under the Disabled Persons Act or the War Veterans Allowance Act, a pension under the Old Age Security Act or a pension for blindness under the Pensions Act.

Recipients of blindness allowances who are in need may receive supplementary aid under general assistance programs in the provinces. In certain circumstances, the Federal Government may share in such aid under the Unemployment Assistance Act (see p. 317).

#### 5.—Statistics of Allowances for the Blind, by Province, Year Ended Mar. 31, 1966 with Totals for 1964-66

### Subsection 4.—Allowances for Disabled Persons

The Disabled Persons Act of 1954, as amended, provides for federal reimbursement to the provinces for allowances paid to permanently and totally disabled persons age 18 or over who are in need and who have resided in Canada for at least ten years immediately preceding commencement of allowance or, if absent from Canada during this period, have been present in Canada prior to its commencement for a period equal to double any period of absence during the period. To qualify for an allowance a person must meet the required definition of "permanent and total disability". The federal contribution may not exceed 50 p.c. of \$75 a month or of the allowance paid, whichever is less. The province administers the program and, within the limits of the federal Act, may fix the amount of allowance payable, the maximum income allowed and other conditions of eligibility. Effective Apr. 1, 1965, Quebec withdrew from this federal-provincial program under the Established Programs (Interim Arrangements) Act, which entitles the province to a tax abatement as an equalization payment.

For an unmarried person, total income including the allowance may not exceed \$1,260 a year. For a married couple the limit is \$2,220 a year except that if the spouse is blind within the meaning of the Blind Persons Act, income of the couple may not exceed \$2,580 a year. Allowances are not paid to a person receiving an allowance under the Blind Persons Act or the War Veterans Allowance Act, assistance under the Old Age Assistance Act, a pension under the Old Age Security Act, or a mother's allowance. The allowance is not payable to a patient in a mental institution or a tuberculosis sanatorium. A recipient who is resident in a nursing home, an infirmary, a home for the aged, an institution for the care of incurables, or a private, charitable or public institution is eligible for the allowance only if the major part of the cost of his accommodation is being paid by himself or another individual.

Recipients of disability allowances who are in need may receive supplementary aid under general assistance programs in the province. In certain circumstances the Federal Government may share in such aid under the Unemployment Assistance Act (see below).

### Subsection 5.—Unemployment Assistance

Under the Unemployment Assistance Act 1956, as amended, the Federal Government may enter an agreement with any province to reimburse it for 50 p.c. of the unemployment assistance expenditures made by the province and its municipalities to persons and their dependants who are unemployed and in need. All provinces and territories have signed agreements under the Act. The rates and conditions of assistance are determined by the provinces or by their municipalities. Payments to both employable and unemployable persons are sharable under the agreements, as are the costs of maintaining persons in homes

for special care, such as nursing homes or homes for the aged. The Federal Government shares in additional assistance paid to needy persons in receipt of old age security pensions, old age assistance, blind persons' allowances, disabled persons' allowances and unemployment insurance benefits, where the amount of the assistance paid is determined through an assessment of the recipient's basic requirements and of his financial resources. The Act will be replaced by the Canada Assistance Plan (see pp. 314-315).

**Subsection 6.—Fitness and Amateur Sport Program**

The Fitness and Amateur Sport Act of 1961, administered by the Minister of National Health and Welfare, provides up to \$5,000,000 a year to be spent on the encouragement, promotion and development of active leisure pursuits for everyone in Canada. Although the federal, provincial and municipal governments provide the funds and resources, the programs are carried out almost entirely by non-governmental agencies. Under the Act, Canadian participation in active recreation and amateur sport can be promoted internationally, nationally, provincially and locally through financial assistance, technical guidance, the provision of teaching materials, assistance to training, research and the construction of facilities. The National Advisory Council of Fitness and Amateur Sport advises the Minister of National Health and Welfare in fitness and amateur sport matters; its 30 members are chosen for their interest and experience, with at least one member from each province.

The federal program has five elements. *Grants to National Organizations*, totalling more than \$1,000,000 a year, go to some 50 national fitness and sporting organizations to help train coaches, to improve standards of instruction, to increase participation in sports, to aid the holding of national and regional competitions, and to assist Canadian athletic teams at international competitions. *Grants for Athletic Events* of nation-wide interest assist in the holding of such events as the 1967 Pan-American Games in Winnipeg and the 1967 Canadian Winter Games in the Quebec area. *Grants for Training and Research* are made for graduate study in fitness and amateur sport, for research fellowships, and for scholarships and bursaries for undergraduate study in physical education and recreation. The Research Committee of the National Advisory Council, which is composed of leading scientists, reviews applications for aid and makes recommendations on general program policy to the Council. *Services of the Department of National Health and Welfare* include the provision of technical advice, training material and promotional aids. Visual aids for coaching, printed guides on particular sports and recreational activities, and technical information on the construction and use of facilities are provided. Typically Canadian sporting and recreational activities have been featured by "How To" kits that include an illustrated manual, a film to rouse interest in the subject, and films in which techniques are demonstrated; these kits and other films are available from the Department's Fitness Film

Library. Committees of the National Advisory Council meet frequently with the executives of sports organizations to discuss policy and a federal-provincial committee of government officials advises on and co-ordinates governmental aspects of the program. The Department also co-ordinates work done by other federal agencies in fitness and amateur sport. *Grants to the Provinces* of \$1,000,000 a year are made to those that enter into cost-sharing agreements for provincial programs of fitness and amateur sports. The Federal Government meets 60 p.c. of the cost of projects and the full cost of the scholarships and bursaries. Applications for all grants at the provincial or local level are made in the first instance to the responsible provincial department. Most of the ideas for recreational activities and plans originate in the municipal recreation departments where the needs of the individual communities are best known.

### **Subsection 7.—National Welfare Grant Program**

The National Welfare Grant Program was established in 1962 to help develop and strengthen welfare services in Canada through a general welfare and professional training grant and a welfare research grant. For the year ending Mar. 31, 1967, \$2,000,000 was allotted to the program. Provincial governments, municipal welfare departments, non-governmental welfare and correctional agencies, universities and individuals may be the ultimate recipients of grants under one or more provisions of the program. Some are financed and administered entirely by the Federal Government; others require application through a provincial department of welfare that actually makes the award on a cost-sharing basis with the Federal Government.

General welfare, bursary, training and staff development grants are shared provisions. General welfare grants provide funds for projects to improve welfare administration, to develop provincial consultative and co-ordinating services, and to strengthen and extend public and voluntary welfare services in child welfare, aging, general assistance and other welfare fields. Bursaries are provided for full-time graduate training at Canadian schools of social work, and training grants are available for employees of government and voluntary welfare agencies. Staff development grants provide support for a wide variety of staff training programs for personnel employed, or to be employed, in public and non-governmental welfare agencies. The other provisions of the program are administered by the Federal Government. Welfare scholarships are awarded for graduate study in Canadian schools of social work and fellowships for advanced study at Canadian and foreign universities. Teaching and field instruction grants assist Canadian schools of social work with the salaries of additional staff required to implement the program.

Under the welfare research grant, funds are provided for a variety of research studies undertaken by public and voluntary welfare and correctional agencies, universities and research institutions.

The flexibility of the program was increased by policy changes made in 1966. Demonstration grants, to test new and different ways of providing services, previously given on a shared-cost basis, no longer require sharing. Also, national voluntary welfare agencies may now submit directly to the Federal Government projects related to the strengthening and development of welfare services not covered by other provisions of the program.

Total expenditures under the program for the year ended Mar. 31, 1966 amounted to \$1,131,749, distributed as follows: research, \$112,023; bursaries, fellowships and scholarships, \$142,253; training, \$111,250; teaching and field instruction, \$233,287; staff development, \$99,734; and welfare services and demonstration projects, \$433,202.

### **Subsection 8.—Vocational Rehabilitation**

The federal-provincial vocational rehabilitation program, started in 1952, was consolidated and extended under the Vocational Rehabilitation of Disabled Persons Act, 1961. Under federal-provincial agreements to share equally the costs of co-ordination,

assessment and provision of services to disabled individuals, of training personnel and of research, the provinces have developed comprehensive programs in co-operation with existing services. Approved services comprise medical, social and vocational assessment, counselling, restorative services, vocational training and employment placement. A provincial co-ordinator of rehabilitation is responsible for the co-ordination and administration of these services to disabled individuals in each province. In the year ended Mar 31, 1966, the provincial staff employed in vocational rehabilitation totalled 323.

The federal aspects of the program are administered by the National Co-ordinator of Rehabilitation through the Civilian Rehabilitation Branch of the Department of Manpower and Immigration. The Minister of that Department receives the advice of the National Advisory Council on the Rehabilitation of Disabled Persons, composed of representatives of the provinces, employers, labour, the medical profession, national voluntary agencies and the universities. In 1965-66, federal-provincial expenditures under the program (exclusive of vocational training) totalled \$1,714,623. Full reports were received on 2,451 disabled persons rehabilitated during the year; before rehabilitation most of these persons and their dependants relied on private or public assistance for support at an estimated annual cost of \$1,600,000 but following rehabilitation the estimated amount earned by those gainfully employed was \$5,600,000.

The Civilian Rehabilitation Branch, through its Division of Older Workers, also has the function of encouraging a more favourable employment climate for older workers through the development of a long-range educational program, the encouragement of research, the maintenance of liaison with employer and labour organizations and voluntary agencies in Canada and other countries, and the assembly and dissemination of information.

Under the sections of the Technical and Vocational Training Assistance Act of 1961 that provide for equal federal-provincial sharing of the cost of approved programs for the training of disabled persons for gainful employment, there were in 1965-66 approximately 3,900 persons enrolled in various courses; federal payments amounted to \$799,894. Referrals for job placement are made to 386 special services officers in 211 local Manpower and Employment Offices. Placements of handicapped persons in 1965-66 (including those referred from provincial rehabilitation authorities) numbered 23,658.

With the integration of the federal-provincial vocational rehabilitation program into the new Canada Manpower Services,\* vocational rehabilitation services will be increasingly extended to persons with handicaps to employability other than physical and mental impairment.

### Section 3.—Provincial Welfare Programs

Major welfare programs governed by provincial legislation include general assistance and social allowances, mothers' allowances, services for the aged, and child welfare services. Also, the Province of Quebec has established and is operating the Quebec Pension Plan, which is comparable to the Canada Pension Plan; both Plans commenced in January 1966 and are to be closely co-ordinated (see pp. 309-312). In most provinces, responsibility for a number of the programs is shared by the provinces and their municipalities. Provincial administration is carried out through the department of public welfare in each province; several departments have established regional offices to facilitate administration and to provide consultative services to the municipalities.

The provincial departments of public welfare are placing increasing emphasis on standards of administration and on rehabilitative services for social assistance recipients, several provinces having recently introduced legislation under which the province will share with the municipalities the costs of preventive and rehabilitative welfare services. In the field of child welfare, the main efforts are being directed toward improvement of standards with particular emphasis on preventive casework services for children in their own homes, development of specialized children's institutions, group-living homes, and the finding of adoption homes for all children in need of them.

\* See Chapter XVIII on Labour.

Public services are supplemented by those of voluntary agencies whose interests include the welfare of families and children and of groups with special needs, such as the aged, recent immigrants, youth groups, and released prisoners. Welfare councils and social planning councils contribute to the planning and co-ordinating of local welfare services. Local voluntary agencies and institutions may receive public grants, depending on the nature and standard of their services, although, with the exception of the semi-public children's aid societies, their main support is usually from united funds or community chests, or from sponsoring organizations.

### Subsection 1.—General Assistance

All provinces make legislative provision for general assistance on a means or needs test basis to needy persons and their dependants who cannot qualify for other forms of aid, and some provinces include those whose benefits under other programs are not adequate. Where necessary, the aid may be for maintenance in homes for special care. In addition to financial aid for the basic needs of food, clothing, shelter and utilities, some provinces provide incapacitation or rehabilitation allowances, counselling and homemaking services, and post-sanatorium care and some provide allowances to persons with long-term need: persons who are unable to support themselves because of mental or physical disability or because of their age, mothers with dependent children and, in two provinces (Ontario and Quebec), needy widows and unmarried women of 60 years of age or over. This assistance is administered by the province or by the municipalities with substantial financial support from the province, which, in turn, is reimbursed by the Federal Government under the Unemployment Assistance Act for 50 p.c. of the provincial and municipal assistance given (see p. 317).

The provincial departments of public welfare have regulatory and supervisory powers over municipal administration of general assistance and may require certain standards as a condition of provincial aid. Length of residence is not a condition of aid in any province, but the residence of the applicant as defined by statute determines which municipality may be financially responsible for his aid. This rule does not apply in three provinces; British Columbia and Saskatchewan have equalized municipal payments and Quebec does not require its municipalities to contribute to general assistance costs. Provinces with unorganized areas take responsibility for aid in these districts. Under the federal Unemployment Assistance Act, all provinces have agreed that residence shall not be a condition of assistance for applicants who move from one province to another. For persons without provincial residence (usually a period of one year), aid may be given by the province or the municipality and a charge-back may or may not be made to the province or municipality of residence.

The formula for provincial-municipal sharing of costs is determined by the province. A substantial proportion of the costs of aid given to needy persons is borne by the province through assumption of responsibility for aid to certain categories of persons and through reimbursement of municipal expenditures varying by province from 40 p.c. to 100 p.c. In Nova Scotia, New Brunswick and Ontario, the province also reimburses the municipalities for 50 p.c. of the costs of administration. In British Columbia, the province shares with the municipalities expenditures on the salaries for social workers. In Newfoundland all aid is provincially administered. During 1966, a number of provinces introduced legislation extending provincial responsibility for the financing of welfare services.

### Subsection 2.—Mothers' Allowances

All provinces make provision for allowances to needy mothers. A number of provinces include such allowances in a broadened program of provincial allowances to persons in several categories of long-term need or have incorporated this legislation with general

assistance within a single Act, while continuing separate administration. In British Columbia, on the other hand, aid is provided to needy mothers under the general assistance program on the same basis as to other needy persons.

Subject to conditions of eligibility which vary from province to province, mothers' allowances or their equivalents are payable from provincial funds to applicants who are widowed, or whose husbands are mentally incapacitated or are physically disabled and unable to support their families. They are also payable to deserted wives who meet specified conditions; in several provinces to mothers whose husbands are in penal institutions, or who are divorced or legally separated; in some, to unmarried mothers; and in Ontario, Quebec and Nova Scotia to Indian mothers. Foster mothers are eligible under certain circumstances in most provinces.

The age limit for children is 16 years in most provinces, with provision made to extend payment for a specified period if the child is attending school or if he is physically or mentally handicapped. In all provinces applicants must satisfy conditions of need and residence but the amount of outside income and resources allowed and the length of residence required prior to application vary, the most common period being one year. One province has a citizenship requirement.

#### 8.—Mothers' Allowances, by Province, as at Mar. 31, 1965 with Totals for 1963-65

<sup>2</sup> An additional 4,106 families with 12,540 children were assisted under Part III of the Public Welfare Act; cost of allowances for this group is not available separately.

<sup>3</sup> Caseload merged with social assistance; no separate figures available.

#### Subsection 3.—Living Accommodation for Elderly Persons

In all provinces, homes for the aged and infirm are provided under provincial, municipal or voluntary auspices. These homes are required to meet standards set out in provincial legislation relating to homes for the aged, welfare institutions, or public health. Voluntary homes are usually provincially inspected and in some provinces must be licensed.

Most of the provinces make capital grants toward the construction or renovation of homes for the aged by municipalities or voluntary organizations and exempt homes for

the aged from municipal taxation; some guarantee the repayment of loans made for the construction of homes. Most provinces also make provision for capital grants to municipalities, voluntary organizations, or limited-dividend companies for the construction of low-rental housing for the elderly. These projects are usually built under Sect. 16 of the National Housing Act, which provides for long-term low-interest loans to limited-dividend companies constructing low-rental self-contained or hostel accommodation for the elderly. Units for the elderly may also be included in low-rental public housing projects for families built under Sect. 35 of the Act. Three provinces guarantee the repayment of loans made for the construction of low-rental housing, and one province pays an annual maintenance grant for such housing.

In some provinces efforts are made to place well, elderly people in small proprietary boarding homes. Elderly persons who are chronically ill may be cared for in chronic or convalescent hospitals, private or public nursing homes and some homes for the aged. All provinces contribute to the maintenance of needy persons in homes for the aged or other homes for special care, and these costs are shared by the Federal Government under the Unemployment Assistance Act (see p. 317). Under its Elderly Persons Social and Recreational Centres Act, Ontario provides for a provincial grant of up to 30 p.c. of the cost of constructing or acquiring a building for use as a centre if the local municipality contributes 20 p.c. of the cost.

#### **Subsection 4.—Child Welfare Services**

Child welfare services, which include child protection and care, services for unmarried parents and adoption services, are provided in all provinces under provincial legislation. The program may be administered by the provincial authority or the responsibility may be delegated to local children's aid societies (voluntary agencies with boards of directors, operating under charter and under the general supervision of provincial departments). In Newfoundland, Prince Edward Island and Saskatchewan, child welfare services are administered by the province; in Alberta they are mainly administered by the province although in the larger urban centres there is some delegation to the municipality; in Quebec they are administered by recognized voluntary agencies and institutions, religious and secular; in Ontario and New Brunswick, a network of local children's aid societies is responsible for the services; in Nova Scotia, Manitoba and British Columbia, services are administered by local children's aid societies in the heavily populated areas and by the province elsewhere.

Children's aid societies and the recognized agencies in Quebec receive substantial provincial grants and sometimes municipal grants and in many areas they also receive support from private subscriptions or from community chests or united funds. Maintenance costs for children in care of a voluntary or public agency may be borne entirely by the province or partly by the municipality of residence and partly by the province.

The child welfare agencies, provincial or private, have the authority to investigate cases of alleged neglect and, if necessary, to apprehend a child and to bring the case before a judge upon whom rests the responsibility of deciding whether in fact the child is neglected. When neglect is proved, the court may direct that the child be returned to his parent or parents, under supervision, or be made a ward of the province or a children's aid society or, in Quebec, be placed under the authority of a suitable person or agency whose services may involve casework with families in their own homes, care in foster boarding homes or adoption homes, or, for children who need it, in selected institutions. Children placed for adoption may be wards or they may be placed on the written consent of the parent. Adoptions, including those arranged privately, number about 14,000 annually.

Child welfare agencies make use of the small selective institution for placement of children who are forced to be away from their own homes for a short period or who may

need preparation for placement in foster homes, and emphasis is increasingly being placed on group-living homes. The development of small, highly specialized institutions, which function as treatment centres for emotionally disturbed children, is of particular significance. Institutions for children are governed by provincial child welfare legislation and by provincial or municipal public health regulations; they are generally subject to inspection and in some provinces to licensing. Sources of income may include private subscriptions, provincial grants, and maintenance payments on behalf of children in care, payable by the parents, the placing agency or the responsible municipal or provincial department.

Services to unmarried parents include casework services to the mother and possibly to the father, legal assistance in obtaining support for the child from the father, and foster-home care or adoption services for the child. Support for unmarried mothers may be obtained under general assistance programs. In many centres, homes for unmarried mothers are operated under private or religious auspices.

Day nurseries for the children of working mothers are established only in the larger centres and chiefly under voluntary auspices. Licensing is required in five provinces but Ontario is the only province with a Day Nurseries Act.

### **Section 4.—International Welfare\***

Canada's participation in the international welfare activities of the United Nations and its Specialized Agencies and of other international organizations is co-ordinated by the Department of National Health and Welfare.

Canada has been on the Executive Board of the United Nations Children's Fund (UNICEF) since the Fund was created in 1946, except for a three-year period from 1959 to 1961. The Deputy Minister of National Welfare, the Canadian representative on the Executive Board of UNICEF, was elected Chairman of the Board in February 1966 after serving two consecutive terms as Chairman of its Programme Committee. Some 224 UNICEF-assisted projects are at present benefiting the health, education and welfare of needy children in 84 developing countries and territories. Canada is also represented on the Economic and Social Council of the United Nations and on the Governing Body of the International Labour Organization.

Through multilateral and bilateral programs, Canada contributes technical assistance to developing countries in the social as well as in other fields. Academic training and observation tours are arranged for foreign students in Canadian universities and institutions and Canadian welfare experts are sent abroad to help in the social development of less advanced nations. In addition to the activities and contributions by the Canadian Government, Canadian voluntary agencies are active in providing aid to developing countries and participating in international discussions of welfare matters.

## **PART III.—HEALTH AND SOCIAL WELFARE EXPENDITURES**

### **Section 1.—Government Expenditures on Health and Social Welfare**

In the seven years ended Mar. 31, 1959-65, expenditures of all levels of government on health and social welfare rose from \$2,821,000,000 to \$4,466,500,000, an increase of 58 p.c. If these figures are adjusted to take account of the growth in population, the increase in per capita expenditures—from \$164 to \$231—is about 41 p.c. Government expenditures may also be measured in relation to major economic indicators; on this basis, annual

\* See also pp. 171-176.

government expenditures on health and social welfare rose over the 1959-65 period from 11.1 p.c. to 12.5 p.c. of net national income and from 8.4 p.c. to 9.3 p.c. of gross national product. The federal share of health and social welfare expenditures fell from 73.9 p.c. in 1958-59 to 66.4 p.c. in 1964-65, the provincial share rose from 22.2 p.c. to 30.7 p.c. and municipal outlays declined from 3.9 p.c. to 2.9 p.c. Compared with the previous year, 1963-64, health and social welfare expenditures by all levels of government increased by \$379,000,000 or 9 p.c. Although outlays by all governments increased, provincial expenditures showed the greatest gain.

Of considerable interest is the growing proportion of government expenditures on health and social welfare taken up by health programs; in 1958-59 such programs accounted for \$624,000,000 or 22 p.c. and in 1964-65 for \$1,573,000,000 or 35 p.c.

EXPENDITURE ON HEALTH AND SOCIAL WELFARE  
BY ALL LEVELS OF GOVERNMENT, YEARS ENDED MAR. 31, 1946-65

An outline of the principal components for 1964-65 shows the magnitude of the major programs and services—family allowances payments amounted to \$546,000,000, old age security payments to \$885,000,000, unemployment insurance benefits to \$335,000,000, veterans' pensions and allowances to \$180,000,000 and \$93,000,000, respectively, and payments from the Prairie Farm Emergency Fund to \$11,000,000. These income-maintenance programs were entirely the responsibility of the Federal Government. In addition, payments under the youth allowances program, which commenced in September 1964, amounted to \$27,000,000. The Province of Quebec had instituted a program of schooling allowances three years prior to the introduction of the federal program. This necessitated a special arrangement with Quebec whereby that province continued its program, but with appropriate fiscal arrangements with the Federal Government.

Federal-provincial income-maintenance programs required expenditures of \$90,000,000 for old age assistance, \$7,500,000 for blindness allowances, nearly \$47,000,000 for disabled persons allowances and \$215,000,000 for unemployment assistance, the latter including some municipal expenditure. Effective Apr. 1, 1965, Quebec withdrew from these federal-provincial programs under the Established Programs (Interim Arrangements) Act which entitles that province to a tax abatement as an equalization payment. Workmen's Compensation Boards spent \$120,000,000 on cash benefits for pensions and compensation. Welfare services for Indians and for veterans and the national employment service accounted for \$50,000,000 at the federal level and child welfare services required an expenditure of approximately \$60,000,000 by provincial governments.

In the field of health, federal grants to the provinces under the Hospital Insurance and Diagnostic Services Act totalled almost \$434,000,000 and grants for hospital construction and general health grants to the provinces and municipalities amounted to \$57,000,000. The Federal Government spent \$31,000,000 on its Indian and northern health services and \$47,000,000 on hospital and treatment services for veterans. Provincial expenditures on hospital care are estimated to have totalled \$740,000,000, and \$100,000,000 was spent on other health services. Workmen's Compensation Boards paid \$54,000,000 for medical aid and hospitalization, and municipal governments spent \$81,000,000 on health.

EXPENDITURE ON HEALTH AND SOCIAL WELFARE BY ALL LEVELS OF GOVERNMENT WITH PERCENTAGES OF TOTAL GOVERNMENT EXPENDITURE, NET NATIONAL INCOME AND GROSS NATIONAL PRODUCT, YEARS ENDED MAR. 31, 1951-65

## Section 2.—Expenditures on Personal Health Care

Expenditures made on personal health care services, for the purposes of this Section, include the amounts spent by hospitals and the amounts received by physicians, dentists, pharmacists for prescription services, and by other paramedical professionals in the provision of health care and treatment directly to individuals. No attempt is made to include expenditures on public health, or public or private capital expenditures such as the building or extension of hospitals or other health facilities. Also excluded are the cost of administration of public health programs and other technical services as well as the cost of administering voluntary profit or non-profit health insurance plans. On the other hand, expenditures by the three levels of government on behalf of individuals are included.

Canadians spent an estimated \$2,194,000,000 in 1964 on personal health care, which is two and a half times the \$870,000,000 they spent in 1955. The annual rates of increase varied from 8.0 p.c. in 1962 to 13.6 p.c. in 1956, their average being 10.8 p.c. The per

capita expenditure, which was \$55.40 in 1955, rose to \$105.73 in 1963 and an estimated \$114.04 in 1964. The population increase during the period was 22.5 p.c.

The proportion of the gross national product represented by expenditures on personal health care was 3.2 p.c. in 1955 and 4.7 p.c. in 1964. Thus, one in every \$21 of production in Canada in 1964 was for personal health care goods and services as compared with one in every \$31 nine years previously.

Payments received by physicians and surgeons for providing personal medical care services comprise about 23 p.c. of total expenditures on personal health care, and amounted to almost \$494,000,000 in 1964.

## 2.—Expenditures on Personal Health Care, 1955-64

NOTE.—Figures exclude expenditures on public health and expenditures for capital purposes.

<sup>1</sup> Includes gross expenditures of public and private acute, chronic and convalescent hospitals in 1955-57 and, in non-participating provinces, in 1958-60; includes gross expenditures of budget review and contract hospitals in 1961-64 and, in participating provinces, in 1958-60; excludes expenditures of mental, tuberculosis and federal hospitals.

<sup>2</sup> Includes gross expenditures of public and private hospitals; excludes expenditures of federal hospitals.

<sup>3</sup> Includes acute, chronic, convalescent, mental and tuberculosis hospitals of the Department of National Health and Welfare and the Department of Veterans Affairs; excludes hospitals of the Department of National Defence.

<sup>4</sup> Sold by retail drugstores only.

<sup>5</sup> Estimated.

<sup>6</sup> Includes estimated expenditures for services of private duty nurses, chiropractors, osteopaths and optometrists; excludes all employees of hospitals.

<sup>7</sup> Estimate calculated on a new basis and not necessarily comparable with figures for earlier years.

## PART IV.—NATIONAL VOLUNTARY HEALTH AND WELFARE ACTIVITIES

A number of national voluntary agencies carry on important work in the provision of health and welfare services, planning research and education, supplementing the services of the federal and provincial authorities in many fields and playing a leading role in stimulating public awareness of health and welfare needs and in promoting action to meet them. The functions of twenty important voluntary agencies are described in the 1962 Year Book at pp. 270-274.

**Voluntary Medical Insurance.**—About 11,700,000 Canadians, or 61 p.c. of the population of Canada, had voluntarily secured some protection against the costs of physicians' services at the end of 1964. This protection was provided by 62 non-profit plans with an enrolment of 6,450,000, and 79 private companies giving coverage to an estimated 5,260,000 persons. The total was 5,800,000 above the 1955 figure, which represented only 40 p.c. of the population.

The non-profit plans took in about \$186,000,000 in premiums and \$4,200,000 in other revenue in 1964, paid out \$173,000,000 in benefits and \$13,400,000 for administration, and were left with a surplus of approximately \$3,800,000. Thus, for every dollar

of premiums, 93 cents were paid out in benefits, which amounted to approximately \$26.98 per person covered. In 1955, benefit payments had been \$41,400,000, representing 89 cents of the premium dollar and amounting to only \$13.17 per person.

Profit-making private companies wrote \$119,700,000 of premiums for health protection in 1964; they paid out \$92,000,000 in claims.

## PART V.—VETERANS SERVICES\*

The Department of Veterans Affairs administers most of the legislation known collectively as the Veterans Charter and also provides administrative facilities for the Canadian Pension Commission, which administers the Pension Act and Parts I to X of the Civilian War Pensions and Allowances Act; for the War Veterans Allowance Board, which administers the War Veterans Allowance Act and Part XI of the Civilian War Pensions and Allowances Act; and for the Secretary General (Canada) of the Commonwealth War Graves Commission.

The principal benefits now available to veterans are medical treatment for those eligible to receive it, land settlement and home construction assistance, educational assistance for the children of the war dead, veterans insurance, general welfare services, unused re-establishment credit, disability and widows pensions and war veterans allowances. The work of the Department, except the administration of the Veterans' Land Act, is carried out through 17 district offices and five sub-district offices in Canada and one district office in England; the benefits of the Veterans' Land Act are administered through seven district offices and 25 regional offices across Canada.

As part of the Department's continuing policy to cherish the memory of Canada's war dead, ceremonies were held in France in June-July 1966, commemorating the fiftieth anniversary of Canadian participation in the Battles of the Somme 1916, and honouring the dead of these and other battles. June 11-17 in Centennial Year will be Veterans Week, during which the Government and veterans organizations across Canada will conduct activities to feature the contributions, achievements and sacrifices of the Canadian citizen-in-arms.

## Section 1.—Pensions and Allowances

### Disability and Dependants Pensions

**Canadian Pension Commission.**—The Canadian Pension Commission administers the Pension Act (RSC 1952, c. 207, as amended) and Parts I to X of the Civilian War Pensions and Allowances Act (RSC 1952, c. 51, as amended). Its members are appointed by the Governor in Council and it reports to Parliament through the Minister of Veterans Affairs. The Commission has district offices in principal cities across Canada with a Senior Pension Medical Examiner in charge and also is represented by a Senior Pension Medical Examiner in London, England, located in the district office of the Department of Veterans Affairs in that city. (See also p. 131.)

**The Pension Act.**—Previous issues of the Year Book contain information on the development of Canadian pension legislation together with yearly statistics of numbers and liabilities.

The Pension Act makes provision for the payment of pensions in respect of disability or death resulting from injury or disease incurred during or attributable to service with the Canadian Navy, Army or Air Force in time of war or peace. Provision is also made for supplementing, up to Canadian rates, awards of pension to or in respect of Canadians for disability or death suffered as a result of service in the British or Allied Forces during World War I or World War II, or payment of pension at Canadian rates in cases where

\* Prepared by the Department of Veterans Affairs, Ottawa.

the claim has been rejected by the government of the country concerned. The annual rates for a 100-p.c. disability for all ranks up to and including that of Colonel and equivalent rank are:—

Pensioner.....	\$ 2,400
Wife.....	768
One child.....	360
Two children.....	624
Each additional child.....	216

For assessments lower than 100 p.c., the awards are proportionately less. The rate of personal pension is higher if the pensioner held a rank higher than Colonel or equivalent rank at the time the disability was incurred, but the additional pension for wives and children remains the same for all ranks. Attendance allowance, which is payable to a pensioner who is totally disabled, helpless and in need of attendance, and which varies from a minimum of \$480 to a maximum of \$3,000 a year depending on the degree of attendance required, is paid in addition to pension. Although a pensioner must be totally disabled to receive this allowance, the disability resulting in the need of attendance may be non-pensionable.

The annual rates of pension for widows and children of all ranks up to and including that of Colonel and equivalent rank are:—

Widow.....	\$ 1,824
One child.....	720
Two children.....	1,248
Each additional child.....	432

Rates for widows are higher if the deceased veteran held a rank higher than that of Colonel or equivalent rank, but those for children remain the same for all ranks.

The Civilian War Pensions and Allowances Act, Parts I to X, provides for the payment of pensions to or on behalf of persons who served in certain civilian groups that were closely associated with the war effort during World War II and who suffered injury or death as a result of such service; these include merchant seamen, saltwater fishermen, auxiliary services personnel, ferry pilots of the RAF Transport Command, firefighters who served in Britain, etc.

#### 1.—Pensions in Force under the Pension Act, as at Dec. 31, 1965

Service	Disability		Dependant		Disability and Dependant

Special Force.....	1,829	1,408,838	184	293,542	2,013	1,702,380
<b>Totals.....</b>	<b>144,790</b>	<b>132,107,703</b>	<b>30,834</b>	<b>50,603,102</b>	<b>175,624</b>	<b>182,710,805</b>

#### War Veterans Allowances and Civilian War Allowances

**War Veterans Allowance Board.**—The War Veterans Allowance Board is a quasi-judicial body consisting, at present, of nine members appointed by the Governor in Council. The Board administers the War Veterans Allowance Act and Part XI of the Civilian War Pensions and Allowances Act and reports to Parliament through the Minister of Veterans

Affairs. The Board acts as an appeal court for an applicant or recipient aggrieved by a decision of a District Authority and may, on its own motion, review and alter or reverse any adjudication of a District Authority. The Board is also responsible for instructing and guiding the District Authorities in the interpretation of policy and for advising the Minister with respect to Regulations concerning the administration of the Act.

**War Veterans Allowance District Authorities.**—In 1950, 18 District Authorities were established in the regional districts of the Department of Veterans Affairs and granted full power to adjudicate on all matters arising under the War Veterans Allowance Act. In 1960, a separate Authority, the Foreign Countries District Authority, located in Ottawa, was established to look after recipients living outside Canada. The members of a District Authority are employees of the Department of Veterans Affairs appointed by the Minister with the approval of the Governor in Council.

**War Veterans Allowances.**—The purpose of the War Veterans Allowance Act, 1930 is to provide an allowance to otherwise qualified war veterans who, because of age or infirmity, are no longer able to derive their maintenance from employment and to ensure that their income does not fall below the scale specified in the Schedule to the Act. Widows and orphans of recipients of the allowance are eligible for benefits. Since its inception the Act has been amended on 13 different occasions to meet additional needs of veterans and their dependants. The most recent amendments, passed in 1965, incorporated into the Act the increased monthly rates and annual ceilings authorized under the Appropriation Act effective Sept. 1, 1964, and granted service eligibility to allied veterans who served overseas in the Imperial or Allied Forces during World War I, in Britain only, provided they were domiciled in Canada at the time of joining such forces. This is the same service eligibility now enjoyed by former members of His Majesty's Canadian Forces. The amendments allowed for further exemptions in property and income and provided for administrative improvements. Veterans of the Canadian, Commonwealth and Allied Forces may obtain the benefits provided under the Act if their war service, age or incapacity, residence and financial circumstances meet the prescribed requirements. An otherwise qualified applicant or recipient is allowed to own personal property not exceeding \$1,250 if single, and \$2,500 if married and may also have an interest of up to \$10,000 in his residence. The present monthly rates and the maximum total annual income ceilings are:—

<u>Item</u>	<u>Monthly Rate</u>	<u>Annual Income Ceiling<sup>1</sup></u>
	\$	\$
Single.....	94	1,596
Married.....	161	2,664
One orphan.....	60	1,008
Two orphans.....	105	1,608
Three or more orphans.....	141	2,016

<sup>1</sup> Where a recipient or spouse is blind, the income ceiling is \$120 higher.

At Apr. 30, 1966, there were 85,672 recipients of War Veterans Allowances, made up of 55,771 veterans, 29,585 widows and 316 orphans; 665 of the total resided outside Canada. The annual liability for all recipients was \$95,587,683.

**Civilian War Pensions and Allowances.**—Part XI of the Civilian War Pensions and Allowances Act makes available to certain groups of civilians, their widows and orphans, benefits similar to those available to veterans under the War Veterans Allowance Act. These groups, which performed meritorious service in World War I or World War II, are: Canadian merchant seamen of both Wars; non-Canadians who served in Canadian merchant ships in either War; Canadian voluntary aid detachments of World War I; Canadian

firefighters of World War II; Canadian welfare workers of World War II; Canadian transatlantic aircrew of World War II; and Newfoundland Overseas Forestry Unit of World War II.

Service for at least six months at sea or overseas in the group concerned is the prime requisite for eligibility as to service. VADs in World War I are required to have served on the Continent of Europe or for at least 365 days in Britain prior to the Armistice. A pensioner under Parts I to X of the Act is also eligible. The monthly rates and the maximum total annual income ceilings are identical to those in the War Veterans Allowance Act. At Apr. 30, 1966, there were 1,076 civilians, 247 widows and 10 orphans in receipt of Civilian War Allowances, a total of 1,333 recipients of whom five were residing outside Canada. The 1965-66 liability for all recipients was \$1,799,960.

### **Veterans' Bureau**

The Veterans' Bureau, which is a branch of the Department of Veterans Affairs, assists former members of the Armed Forces and their dependants and former members of the various auxiliary organizations in preparing and presenting claims to the Canadian Pension Commission; it has been in operation for 35 years. The Chief Pensions Advocate, who heads the Bureau at Ottawa, is assisted by pensions advocates, most of whom are lawyers located in the departmental district offices. The pensions advocates appear as counsel for applicants before Appeal Boards of the Commission and, in addition, advise pensioners and applicants upon any provision of the Pension Act or phase of pension law or administration that may have a bearing on pension claims. No charge is made for the services of the Bureau.

During 1965, the Veterans' Bureau submitted 6,795 claims to the Canadian Pension Commission for adjudication, of which 36 p.c. were wholly or partially granted. These included 1,218 claims presented to Appeal Boards of the Commission. During the year, 1,365 straight entitlement claims were submitted to the Commission, based on service in World War I and peacetime, of which 203 were wholly or partially granted; claims based on service in World War II and Korea numbered 3,183, of which 1,083 were wholly or partially granted; and of the 1,029 miscellaneous claims submitted, 610 were wholly or partially granted.

## **Section 2.—Welfare Services**

Welfare services for veterans and, where appropriate, their dependants are provided by the Welfare Services Branch. These include the administration of assigned statutes; the conducting of field work and reporting for other branches of the Department, the Canadian Pension Commission, the War Veterans Allowance Board and Services Benevolent Funds; and the provision of a rehabilitation and welfare program of advice and counselling including referral, where indicated, to other public or private agencies, veterans organizations, etc.

**War Service Grants.**—War service gratuities payable under the War Service Grants Act to veterans of World War II and the operations to restore peace in Korea are now payable only in cases where delayed application is acceptable. Re-establishment credit payable under the same Act is available up to Oct. 31, 1968. Payment of the credit, except for a balance of \$50 or less, is not made in cash to the veteran but is released on his behalf for specified purposes. Up to the end of 1965 a total of \$315,220,832 had been paid out and unused balances amounted to \$8,637,352. During 1965 the total paid out amounted to \$241,732 made up of \$127,021 for purchases of homes and for repairs and furniture; \$20,735 for purchases of businesses, tools and equipment; and \$93,976 for miscellaneous items such as insurance, special equipment for training, clothing, etc.

**Assistance Fund.**—Recipients of benefits under the War Veterans Allowance Act and Part XI of the Civilian War Pensions and Allowances Act living in Canada may be given help from the Assistance Fund if their total income is lower than a stated maximum. Assistance may take the form of a monthly supplement based on shelter, fuel, food, clothing, personal care and specified health costs or of a single award to meet an unusual or emergency need. The number of persons assisted during 1965 was 21,050, the number in receipt of monthly supplements at the end of the year was 15,736 and the Fund expenditures for the year amounted to \$5,489,826; comparable figures for 1964 were 20,513, 15,519 and \$3,758,105, respectively.

**Education Assistance to Children.**—The Children of War Dead (Education Assistance) Act provides help in the form of allowances and the payment of fees for the post-secondary education of children of those whose deaths have been attributed to military service. Assistance is restricted to children attending, in Canada, educational institutions which require secondary school graduation, matriculation or equivalent standing for admission. These include, in addition to universities and colleges, such facilities as hospital schools of teaching and institutes of technology. From its inception in July 1953 to the end of 1965, expenditures totalled \$5,391,428, of which \$2,779,047 was spent in allowances and \$2,612,381 in fees. By the end of 1965, 3,793 children of Canada's war dead had been approved for training. Of these, 1,429 had successfully completed training—194 had obtained degrees in arts and science, 244 in education, 102 in engineering and applied science, 29 in social work, 21 in medicine, 21 in law, 99 in other university faculties, 367 in nursing, 204 in teaching and 148 in administrative and technological fields. At the same date there were 647 university undergraduates and 233 students in non-university courses receiving assistance.

**Veterans Insurance.**—The Returned Soldiers Insurance Act (SC 1920, c. 54 as amended) provides eligibility to contract for life insurance with the Federal Government up to a maximum of \$5,000 to any one veteran of World War I. No policies were issued after Aug. 31, 1933. There were 48,319 policies issued during the eight years in which the Act was open amounting to \$109,299,500 and, of these, there were 6,631 in force with a value of \$14,245,209 on Dec. 31, 1965.

The Veterans Insurance Act (RSC 1952, c. 279 as amended) enables veterans following their discharge and widows of those who died during service to contract with the Federal Government for a maximum of \$10,000 life insurance. Veterans with active service in Korea were extended eligibility by virtue of the Veterans Benefit Act 1954. The period of eligibility to apply for this insurance will cease Oct. 31, 1968. To Dec. 31, 1965, 53,287 policies in the amount of \$173,722,000 had been issued and, of these, 28,299 policies with a value of \$90,054,148 were in force.

**Rehabilitation and Welfare.**—Welfare officers at Departmental District Offices work closely with other branches of the Department, with other public agencies at all levels and with private agencies and organizations in assisting veterans and their dependants to deal with problems of social adjustment, particularly those associated with physical disabilities or the disabilities of increasing age. The latter occur more frequently, of course, as the age of the veteran population increases. Vocational rehabilitation is promoted through training assistance available to disability pensioners and through close collaboration with the federal Department of Manpower and Immigration and provincial rehabilitation and re-training facilities. Sheltered workshops operated at Toronto and Montreal and home assembly work in other centres produce poppies and memorial wreaths and crosses associated with Remembrance Day observances. Finished products are sold to the Dominion Command of the Royal Canadian Legion.

### Section 3.—Treatment Services

**Treatment Activity.**—The Treatment Services Branch of the Department of Veterans Affairs provides medical, dental and prosthetic services for entitled veterans throughout Canada as authorized by the Veterans Treatment Regulations. Service is also provided for members of the Armed Forces, the Royal Canadian Mounted Police, and the wards of other governments or departments at the request and expense of the authorities concerned.

It is the responsibility of the Branch to provide examination and treatment to disabled pensioners for their pensionable disabilities, and to provide treatment to war veterans allowance recipients (but not their dependants), veterans whose service and need make them eligible for domiciliary care, and veterans whose service and financial circumstances render them eligible for free treatment or at a cost adjusted to their ability to pay. If a bed is available, any veteran may receive treatment in a Departmental hospital on a guarantee of payment of the cost of hospitalization. The pensioner receives treatment for his pensionable disabilities regardless of his place of residence but service to other veterans is available in Canada only. Where Departmental facilities are not readily accessible, an eligible veteran may obtain treatment at the expense of the Department in an outside hospital from a doctor of his choice.

Under the federal-provincial hospital insurance program, DVA hospitals are recognized for the provision of insured services to veterans. Any necessary premiums are paid on behalf of veterans in receipt of war veterans allowance. The Veterans Treatment Regulations remain the authority for the treatment of veterans (and others) in DVA institutions and elsewhere under Departmental responsibility, regardless of whether or not the hospitalization is at the expense of the insurance plan.

**Hospital Facilities.**—Treatment is provided in 11 active-treatment hospitals located at Halifax, N.S.; Saint John, N.B.; Quebec City, Montreal and Ste. Anne de Bellevue, Que.; Toronto and London, Ont.; Winnipeg, Man.; Calgary, Alta.; and Vancouver and Victoria, B.C.; and also in a health and occupational centre at Ottawa, Ont., and in two domiciliary care homes at Saskatoon, Sask., and Edmonton, Alta. The rated bed capacity of these institutions at Dec. 31, 1965 was 8,823 beds. It should also be noted that in Ottawa both acute and chronic cases that require definitive treatment are admitted to the National Defence Medical Centre. An additional 571 beds are available in veterans pavilions situated at St. John's, Nfld., Regina, Sask., and Edmonton, Alta. Pavilions are owned by the Department but are operated by the parent hospital, and medical staffs are provided by the Department.

**Medical Staff and Training Programs.**—Many of the professional staffs of Departmental active-treatment hospitals are employed on a part-time basis; in the main they are recommended for appointment by the Deans of Medicine of the universities with which the hospitals are affiliated. Most members of the medical staffs are engaged in teaching and private practice and hold appointments on the medical faculties of the various universities. In the active-treatment institutions, medical teaching programs are maintained, which are considered essential to attract highly qualified professional men and thus ensure the highest quality of medical care. All active-treatment hospitals have been approved by the Royal College of Physicians and Surgeons of Canada for postgraduate teaching in medicine and surgery, and the majority are also approved for advanced postgraduate training in various other specialties. An extensive intern-resident program is in effect in the medical specialties as well as in other fields such as physiotherapy, occupational therapy, dietary, psychology and medical social services. A school for the training of nursing assistants, operated at Camp Hill Hospital in Halifax, has an annual capacity of 70 and graduates are offered employment in other Departmental hospitals. A program of postgraduate and continuing education in pharmacy is conducted, in conjunction with the School of Pharmacy of the University of Toronto, at Westminster Hospital, London, Ont.

**Medical Research.**—During 1965, there were 92 projects in progress under the clinical research program. This program is varied but in the main deals with conditions affecting aging, which the Department is in a special position to investigate. Self-contained clinical investigation units have been set up in active-treatment hospitals located at Montreal, Toronto, London, Winnipeg and Vancouver.

### Section 4.—Land Settlement and House Construction

The Veterans' Land Act, enacted in 1942 and broadened extensively in scope and financial provisions since then, provides financial, technical and supervisory assistance to World War II and Korean Force veterans to enable them to engage in agriculture on a full-time or part-time basis; to acquire and operate commercial fishing establishments; to acquire, build or improve homes; and to settle on provincial, federal and Indian reserve lands. The Act was last amended in June 1965. Provision was made for substantially higher ceilings in the various categories of loans—from \$20,000 to \$40,000 for full-time farmers on economic farm units, from \$12,000 to \$18,000 for small family farmers, from \$10,800 to \$16,000 for small holders (part-time farmers) and from \$12,000 to \$18,000 for veterans building houses. These amendments make the financial assistance available under the Act comparable to that available to non-veterans under the Farm Credit Act and the National Housing Act. Other amendments provide for the financing of secondary enterprises—farm equipment repair shops, tourist facilities, etc.—for the small family farmers; the payment of related debts “reasonably incurred”; the embodiment of the balance of previous loans in new farm loans; and the authority for the Director to assist veterans in the initial financing of an establishment by the repayment of re-establishment credit or rehabilitation grants.

Since inception and up to Dec. 31, 1965, 101,297 veterans have been settled under the provisions of the Act. Of this total, 30,463 were established as full-time farmers, 58,091 as small holders, 5,559 as Crown land settlers, 1,313 as commercial fishermen; 1,674 Indian veterans were established on reservations and 4,197 veterans had homes built on city-size lots. Subsequent to settlement, 11,836 farmers and 6,438 small holders and commercial fishermen were provided with additional financial assistance. In 1965, over \$37,000,000 was approved on behalf of 5,373 veterans. From the commencement of opera-

Financial, technical and supervisory assistance, provided under the Veterans' Land Act, has enabled more than 30,000 veterans to become successful full-time farmers.

tions to the end of 1965, over \$690,000,000 was spent on repayable loans, advances and non-repayable grants. As at Dec. 31, 1965, more than 53,000 veterans had earned conditional grants in excess of \$97,000,000. Since inception and up to the end of 1965, 30,651 veterans had titles to property released to them—11,385 farmers, 13,190 small holders, 414 commercial fishermen, 4,252 Crown land settlers and 1,410 Indian veterans residing on reservations.

Advisory, supervisory and appraisal field services are provided by a staff of farm credit advisers, settlement officers, field officers and construction supervisors, who are highly trained in the techniques pertaining to agriculture, construction and land appraisal. During 1965, 4,174 properties were appraised—1,262 farms, 2,852 small holding and commercial fishing establishments and 60 bare land appraisals. In addition, 1,046 new houses were started—968 small holdings and 78 on city-size lots—and 1,011 new houses were completed. Six construction schools were organized which were attended by 187 veterans.

Continued interest is shown in the Veterans' Land Act group life insurance. By Dec. 31, 1965, 7,130 veterans were covered by insurance to an amount in excess of \$51,000,000. Since the group plan was first introduced, 23 insured veterans have died and \$130,000 has been paid to retire their indebtedness; the total paid in premiums to the end of 1965 was \$432,950.

Veterans continue to maintain a favourable record of repayment. Instalments falling due in 1965 amounted to over \$18,000,000, excluding share-of-crop payments. During the year, almost 97 p.c. of the total amount due was collected and the 1,240 veterans under share-of-crop agreements paid over \$1,400,000.

## 2.—Summary of Operations under the Veterans' Land Act, as at Dec. 31, 1965

Item	Full-Time Farming	Small Holding	Commercial Fishing	Provincial Lands	Federal Lands	Indian Reserves	City-Size Lots	Total
Settlements made..... No.	30,463	58,091	1,313	5,005	554	1,674	4,197	101,297

Houses under construction.... "	86	701	6	13	—	—	73	879

<sup>1</sup> Includes 1,572 civilian purchaser accounts.

## Section 5.—Commonwealth War Graves Commission

The current Charters of the Commonwealth War Graves Commission consist of two documents—the Original Charter of Incorporation dated May 21, 1917 and the new Supplemental Charter dated June 8, 1964. Under these Charters the Commission is entrusted with the marking and maintenance in perpetuity of the graves of those of the British Empire and Commonwealth Armed Forces who lost their lives between Aug. 4, 1914 and Aug. 31, 1921 and between Sept. 3, 1939 and Dec. 31, 1947 and with the erection of memorials to commemorate those with no known grave.

The Canadian High Commissioner in London, England, is the official Commission member for Canada, the Minister of Veterans Affairs is the Agent of the Commission in Canada, and the office of the Secretary-General of the Canadian Agency is in the Veterans Affairs Building, Ottawa.

## PART I.—FORMAL EDUCATION\*

### Section 1.—The Current Education Situation

The Canadian education scene in the mid-1960s continues to be dominated by the need for the development of ever greater knowledge, skills, understanding and appreciation among the nation's youth in order to prepare them, individually and as a community, for the challenges they are expected to face in the future. It is widely recognized that this need should be met not only by developing still further the élite at the top of the academic pyramid but also by extending the base to include all young persons, whatever their abilities and aptitudes and whatever their social circumstances and financial resources.

The findings of systematic research as well as the sometimes bitter experiences of schoolmen have brought about an increased realization of the great diversity in aptitude patterns among young people. If all are to be educated so that individual potential may be fully realized, it follows that there must be an equal diversity in the programs of study or training. Facilities for those of academic and scholarly inclination have existed for many years so that recent emphasis has been placed upon the provision of programs suited to those of more practical bent and to the introduction of other measures designed to hold students within the formal education systems to ever-increasing levels of age and attainment. The chart on p. 338 shows the extent to which such measures have been successful. The modern-day labour force has little use for the untrained and poorly educated young person but is greatly in need of qualified tradesmen, technicians and professionals. For this reason there has been an upsurge in the building of vocational and composite schools, the establishment of community colleges and the introduction of policies and practices to cope more adequately with individual differences, such as non-graded systems, subject-promotion schemes and the extension of guidance facilities.

Efforts are also being made to overcome the financial barriers to continuing education. The investigations of demographers and sociologists are confirming and quantifying the

\* Prepared in the Education Division, Dominion Bureau of Statistics.

long-held suspicions that financial constraints are operating to deny education to many Canadians who could profit from it. Various methods are therefore being sought to lighten the financial burden upon the individual and to equalize the rapidly increasing load being carried by the taxpayer. It is now evident that the Federal Government has a key role to play in this matter, particularly in technical and vocational training and in university education—both matters of prime concern to the nation as a whole. Acknowledgement of this fact is to be seen in the increasing activities of the Technical and Vocational Training Branch of the federal Department of Manpower and Immigration, the formation of a federal office to deal with higher education, the founding of a nation-wide Service for Admission to Colleges and Universities, the holding of an interprovincial Ministers' conference on education and manpower, and renewed attempts to introduce uniform methods of statistical reporting.

Thus it appears that ethical considerations concerning the duties of society in the satisfaction of the personal needs of the individual and economic considerations concerning the kinds of individuals required to satisfy the manpower needs of society are combining to encourage the extension and equalization of educational opportunity. The rising costs

### ESTIMATED STUDENT RETENTION TO SPECIFIED LEVELS OF EDUCATION, 1960 AND 1965

of this endeavour are causing a reappraisal of traditional methods of financing education, tending toward the assumption of increasing proportions of the load by higher levels of government. Taken along with other developments in the economic, social and cultural life of the community, this is resulting in the emergence of the federal authority as an important partner in the task of providing for the education of Canadians.

## Section 2.—Administration and Organization of Education

### Responsibility for Education in Canada

Canada is a federal state, in which responsibility for the organization and administration of public education is exercised by the provincial governments. The Federal Government is directly concerned only with the provision of education for certain special groups—some 138,000 Indians, about 6,000 Eskimos, other children in the Territories, inmates of federal penitentiaries and families of members of the Armed Forces on military stations (although whenever possible provincial educational facilities are used). In addition, the Federal Government makes grants for vocational training, provides per capita grants to each province to be divided among its universities and colleges, participates to a considerable extent in informal education and makes grants-in-aid for research personnel and equipment that assist educational institutions indirectly.

Because each of the ten provinces has the authority and responsibility for organizing its education system as it sees fit, organization, policies and practices differ from province to province. Each has a department of education, headed by a minister who is a member of the Cabinet. Ontario has, in addition, a Department of University Affairs under its Minister of Education. Each department is administered by a deputy minister, or director, who is a professional educationist and a public servant. He advises the minister, supervises the department and gives a measure of permanency to its education policy, in general carries out that policy, and is responsible for the enforcement of the Public School Act. The department of education usually also includes: a chief inspector of schools and his staff of local inspectors; directors or supervisors of curricula, technical education, teacher training, home economics, guidance, physical education, audio-visual education, correspondence instruction and adult education; directors or supervisors of other sections (according to the needs of the particular province); and technical personnel and clerks. Quebec operates a dual system, with an associate deputy minister for each of the Roman Catholic and Protestant sectors. In Newfoundland, which has a public denominational system, there is a superintendent for each one of the five denominations recognized by the School Act.

Other provincial departments having some responsibility for operating school programs are: departments of labour, which operate apprenticeship programs; agriculture departments, which operate agriculture schools; departments of the attorney-general or of welfare, which operate reform schools; and departments of lands and forests, which operate forest ranger schools.

From the beginning each department of education has undertaken, among other things, to provide: (1) inspection services to ensure maintenance of standards; (2) the training and certification of teachers; (3) courses of study and lists of prescribed or approved textbooks; (4) financial assistance to local authorities in the construction and operation of schools; and (5) regulations for the guidance of trustees and teachers. In return, each department requires regular reports from the schools. When first introduced, government grants to schools were based on such factors as the number of teachers, enrolment, days in session and attendance. Somewhat later, special grants were introduced in most provinces to meet a variety of expenses, such as the construction of the first school, the organizing of

special classes, providing transportation for pupils, school lunches and other contingencies. A number of provinces made provision for equalization grants, and now the majority have a foundation program of one kind or another.

The work of the departments of education has grown considerably. Many have expanded their services in the fields of health, audio-visual aids, art, music, agriculture, special education, correspondence courses and prevocational and trade courses. At the same time there has been an increasing delegation of authority to local boards and school staffs. One illustration of this tendency is a reduction in the number of departmental (external) year-end examinations. Few provinces now provide for more than one or two such examinations—at the end of the final and, in some cases, also at the end of the second last year of the secondary school course. Another illustration is the increasing use of approved lists of textbooks from which local authorities may make their own choice, instead of lists of prescribed texts. Courses of study are now seldom planned only by one or two experts in the department; instead they result from conferences and workshops including active teachers and other interested individuals or bodies. In most provinces “curriculum construction” is considered to be a continuous procedure.

### Local Units of Administration

In all provinces, school laws provide for the establishment and operation of schools by local education authorities, which operate under the Public School Act and are held responsible to the provincial government and resident ratepayers for the actual operation of the local schools. Through the delegation of authority, education becomes a provincial-local partnership with the degree of decentralization reviewed intermittently. Questions concerning the allocation of responsibilities between the provincial and local authorities will probably occupy the minds of Canadians for decades to come, as well as problems such as the optimum size of administrative units, schools and classes.

At one time, the provincial departments delegated authority to publicly elected or appointed boards, which functioned as corporations under the School Acts and regulations. These three-man boards were expected to establish and maintain a school, select a qualified teacher and prepare a budget for presentation to the municipal authorities. As towns and cities developed, the original boards remained as units but provision was made in the legislation for urban school boards with more members and generally (although not always) with responsibility for both the elementary and secondary schools.

Rural school districts were typically about four miles square, their size determined largely by the need for the school to be within walking distance of the homes it served. As time went by the realization grew that the manner of living was changing, that farms were becoming much larger and more mechanized, that most farmers had trucks and automobiles, that there were fewer children to the square mile and that it would be more efficient and economical to provide central schools and transportation. There was also considerable discontent among the teachers, as security of tenure was rarely found under the three-man local school boards. Further, the shortage of teachers, differences among the districts in their ability to pay for education, and a demand for secondary school facilities in rural areas all combined to force the establishment of larger administrative units.

Under provincial legislation, larger units are now in effect in Nova Scotia, New Brunswick, Saskatchewan, Alberta and British Columbia, and their establishment is being encouraged and promoted in Newfoundland, Prince Edward Island and Manitoba. (Newfoundland is a somewhat special case in which the denominational school districts, already rather large geographically, are proceeding toward some kind of amalgamation of provision of joint services.) Ontario has abolished the local school sections in favour of township school areas and is now beginning to promote reorganization into county units with responsibility for both elementary and secondary education. In Quebec, the greater part of the Protestant system is organized into larger units and the Catholic system has recently completed a reorganization of its administrative structure (for secondary education) into 55 regions.

In some provinces the local boards disappeared when the larger units were formed; in others they were retained with limited powers and duties. The larger unit boards accept responsibility for providing the necessary staff, buildings, equipment and transportation. Where local boards remain, they usually function in an advisory capacity, and look after the buildings and grounds.

### Elementary and Secondary Education

Enrolment in elementary and secondary schools has been increasing year by year until, in 1964-65, there were 4,972,000 pupils enrolled in public schools, 200,000 in private schools and 70,000 in various vocational schools and courses, both public and private.

Each September, most Canadian children of age six enter an eight-grade elementary school. At about 14 years of age, nearly 90 p.c. of those who entered grade 1 enter a regular four- or five-year secondary school. From the graduates at this level, a limited number—about 13 p.c. of those who began school—go on to college or university where rather more than half of them pursue a three- or four-year program leading to a bachelor degree in arts or science and the remainder enrol in various professional courses such as commerce, education, engineering, law, medicine, theology, etc.

The 8-4 plan leading from grade 1 to university was for many years the basic plan for organizing the curriculum and schools, other than those of Catholic Quebec. This plan, although still followed in some rural, village, town and city schools, has been modified from time to time in various provinces, cities or groups of schools, as it appeared inadequate to meet the demands arising from new aims of education. There are a number of variants to be found at present in Canada: the addition of one or even two kindergarten years at the beginning of the system; the addition of an extra year to high school, providing five rather than four years of secondary schooling; the introduction of junior high schools, changing the organization to a 6-3-3 or 6-3-4 plan; or again, the combining of the first six years of elementary school into two units, each designed to reach certain specified goals during a three-year period. A fairly recent innovation is the establishment of junior colleges, affiliated with universities, in which the last one or two years of high school and the first one or two years of college are offered.

The first secondary schools were predominantly academic and prepared their pupils for entry into university. Until recent years, vocational schools were to be found only in the large cities, although schools in some of the smaller centres did provide a few commercial and technical subjects as options in the academic curriculum. Today, besides commercial and vocational high schools, there are, in increasing number, composite and regional high schools that provide courses in home economics, agriculture, shop-work and commercial subjects as well as in the regular secondary school subjects. The number of subjects offered has also increased greatly and the number of options available, particularly in certain provinces, provides a wide choice for pupils with a great variety of abilities and aims. Three programs can frequently be distinguished—the university entrance course, the general course for those who wish to complete an academic type of program before entering employment, and vocational courses for those who wish to enter skilled trades. Thus, attention is given to the minority who will go on to institutions of higher learning, while the majority, who will look for jobs, are prepared for entry to their chosen occupation. Considerable emphasis has been placed on music, art, physical education, guidance and group activities but not at the expense of the basic subjects that provide a general foundation.

### Education in the Catholic Schools of Quebec

Although Catholic education in Quebec has been considered sufficiently different to warrant a separate description, it is conducted after much the same fashion as education in the other provinces. All types of schools familiar to Canadians elsewhere are to be found in Quebec, including ungraded rural elementary schools, graded urban schools, secondary schools with academic bias, vocational schools and, at the top, universities. The administrative structure of school boards, inspectors and central departmental officials is also broadly similar. Such differences as exist are of historical origin and arise out of the

traditional French-Canadian conception of education, which involved the belief that the greatest contribution by French Canadians to Canada's future could be made by preserving their language and culture, that religion should be an integral part of education, that boys and girls were best educated separately, that education was a privilege and that those who were considering entering the professions might make such a decision at the end of the elementary school. Education was regarded as a means of producing good citizens by training boys to become bread-winners and girls to become home-makers.

A unique feature of the Quebec Catholic system is the existence of the *collèges classiques* which, operated by religious orders, serve by affiliation as the arts faculties of the French-language universities. They accept students who have completed grade 7 and provide an eight-year course leading to the *baccalauréat* and entrance to certain university faculties. Out of the scholarly traditions of this system has arisen the cultural and professional élite in law, medicine, theology and the arts in French Canada.

The political, social and economic ferment of the present decade is being reflected in education and is resulting in rapid and complex changes in the organizational structure and in curriculum content. Government functions previously scattered among several departments have been brought together under a new department of education, created in 1964. The new department took upon itself the task of completely reorganizing education in the province, introducing new policies and practices, many of them on the recommendation of the Royal Commission on Education, established in 1961 under the chairmanship of Monsignor Alphonse-Marie Parent. The assessment of resources required to meet present and future needs was seen as one of the prime tasks; a directorate of planning was set up and newly created regional school commissions were assigned planning functions. It was evident that Quebec was behind most other provinces in the provision of education for a technological age, and so the early concern has been with the expansion of facilities for relating the educational process to the world of work—the building of school plant, the establishment of consultative committees with the trades and professions, and the promotion of guidance and counselling in the schools.

Regulations have been announced providing for the introduction of a six-year elementary program, in general with promotion according to age, and a five-year secondary course with a highly diversified curriculum and a subject-promotion scheme. Pre-university and professional education is to be offered for a further two and sometimes three years at special institutes to be established for the purpose. Other major changes involve the departmental examinations system, teacher training, the establishment of regional offices of the department, and many financial provisions, including arrangements with private schools for the payment of fees and increased availability of bursaries and scholarships.

**Newfoundland.**—The topographical and economic circumstances of the Island influenced the development of education as did pockets of settlers establishing themselves in outposts which were relatively self-sufficient. Active leadership of the churches and homogeneity of the village populations provided a minimum of overlapping of denominations except in a few industrial areas or the larger cities. A Royal Commission is considering the efficiency of the present organization with a view to increasing the education level of the Island's population.

The present system is predominantly denominational although there are amalgamated and community schools operated by the Department of Education. The schools are administered on a local basis by the five largest denominational groups—Roman Catholic, Anglican, United Church, Salvation Army and Pentecostal Mission. These operate under five superintendents, each in charge of the schools of his faith, and a member of the Department. Local boards, including the local clergymen as members, select teachers, pay salaries from government grants and look after the school property. All schools follow the provincial course of study and examinations, scholarships and diplomas are determined by an interdenominational body representing the major denominations and the Department.

**Education in the Yukon and Northwest Territories.**—In the Yukon Territory, the school system is operated by the Territorial Government through a superintendent and staff at Whitehorse responsible to the Commissioner of the Territory who, in turn, receives instructions from the Minister of Indian Affairs and Northern Development in Ottawa. The Education Division of the Northern Administration Branch of the Department of Indian Affairs and Northern Development offers advice on education policy to the Minister and Territorial authorities. All schools, both public and separate, with the exception of the Carcross Indian Residential School (operated by the Department in co-operation with the Territorial Government) and St. Mary's School (a quasi-private school operated by the Roman Catholic Church in Dawson) come under the direct ownership and operation of the Government of the Yukon Territory. Although there is provision for three types of schools in the Yukon—public, separate and Indian—most of the Indian children attend either the public or the separate schools. In 1965, the population was 15,000 of whom 2,400 were Indians. By choice, the schools of the Yukon follow the British Columbia education curricula.

In the Northwest Territories (the Districts of Mackenzie, Franklin and Keewatin) the school system is operated by the Education Division of the Northern Administration Branch of the Department of Indian Affairs and Northern Development by agreement with the Government of the Northwest Territories. The Federal Government, as the operating agency, finances school operation and receives from the Territorial Government the pupil cost for pupils who are neither Indian nor Eskimo. Enrolment for the 1965-66 term included 2,987 Eskimos, 1,285 Indians and 2,924 others, a total of 7,196 in the Northwest Territories and Arctic Quebec combined. Yellowknife public and separate school districts and Hay River separate school district are financed partly by local taxation and partly through grants-in-aid from the Federal and Northwest Territorial Governments. Inspection and supervisory services are provided by the Education Division. Alberta education curricula, subject to increasing modifications, are prescribed for the schools of the Northwest Territories. Expansion is taking place in school accommodation and basic elementary and secondary education is being provided for all children in the Territories and for Eskimo children in northern Quebec, as well as vocational training for them and for young adults showing interest and special aptitude. The program, which is an integrated one for the children of all races in the North, provides for the construction of schools and student residences, curricula designed for a northern environment, bursaries and other student aids, and special vocational training projects appropriate to both local craftsmanship and mechanical trades in such fields as construction, transportation and mining.

### Special Education

Interest is increasing in the education of exceptional children—those who deviate so far from the normal as to require special educational facilities. New types of special classes are sometimes started by parents of children with a common disability, who band together to provide help and show the need for such service, which is then taken over by public bodies. Progress in providing such education varies from province to province. It is most commonly found in the city school systems; in rural areas there is usually little provision for the child who needs special attention, except for those who are admitted to residential institutions. There are six schools for the blind, 13 schools for the deaf and a number of training schools for mental defectives. Special classes are found in tuberculosis sanatoria, mental hospitals and reformatories. In many cities, there are classes for the hard-of-hearing, the partly blind and other physically and mentally handicapped children and a few for the highly gifted.

### Teachers

All provinces require candidates for elementary school teacher certificates to have high school completion or better, with at least one year of professional training in a faculty of education or a teachers' college. The training usually consists of professional and academic courses, and some time spent in practice teaching. High school teachers are generally

university graduates who have taken an additional year of professional training in a college of education, or who have graduated with a degree in education. The trend is for the government departments of education to give the universities responsibility for the training of elementary school teachers as well as secondary school teachers. In Newfoundland, Prince Edward Island, Manitoba, Alberta and British Columbia all teacher training is conducted at the university, where three or four different courses leading to a degree are provided. About three quarters of the time is devoted to academic courses in arts and science and the remainder to professional courses. In some of the other provinces, close contact is maintained between teacher training college and university.

In 1964-65 there were 122 normal schools and teachers' colleges and 26 faculties or colleges of education engaged in teacher training with a total enrolment approaching 38,000. In the same year there were 191,000 full-time teachers in the public elementary and secondary schools throughout the 10 provinces and 12,000 in the private schools.

Most teachers in these schools are paid according to a local salary schedule based on years of training and experience; they contribute to a provincial superannuation scheme and are members of a provincial professional organization. In 1964-65 about 66 p.c. of them were women, of whom a little more than half were married. The median salary of all teachers and principals in the nine provinces other than Quebec was \$4,954, an increase of 4.9 p.c. over the previous year. Apart from teachers in Quebec concerning whom adequate data were not available, about 11 p.c. of those in elementary schools and about 72 p.c. of those in secondary schools had university degrees.

### Higher Education

Out of the two distinct cultures upon which the Canadian nation is founded have arisen two somewhat different systems of higher education. One, originally patterned on the French system before the secularization of higher education in France with the majority of the institutions under control of Catholic orders or groups, has in recent years adapted more and more to North American traditions but still retains distinctively French characteristics. The other was originally designed more according to English, Scottish and United States practices, instruction being given in English and controlled by a variety of groups—religious denominations, governments and private non-denominational bodies. Institutions comprising a third small group and giving instruction to both English-speaking and French-speaking students are operated or controlled mainly by Catholic groups, although the first such bilingual institution to be established—the University of Ottawa—was reorganized in 1965 under a non-denominational board of governors.

Large universities, with numerous faculties and provision for graduate study in many fields, are comparatively recent phenomena. Until the middle of the nineteenth century, higher education in Canada included little more than arts and theological training. From that time, more instruction in science and certain professional fields was gradually introduced. Graduate studies, to judge by the number of earned doctorates, did not acquire numerical importance until after 1920. Only for the past 20 years or so have more than 100 earned doctorates been granted annually.

Civil legislation regarding the establishment of new institutions, or changes in existing ones, is usually enacted by provincial legislatures, except for federal military colleges and a few institutions originally established by Act of the Canadian Parliament. Once an institution is legally chartered, control is vested in its governing body, the membership of which is indicated in the charter. The line of authority runs from the board of governors through the president (or *recteur*) to the senate and deans and the faculty as a whole.

The composition of the board of governors varies according to the type of institution. Provincial universities normally have government representation; church-related institutions have clergymen. Nearly all boards have either direct representation from the business community, alumni associations and other organizations, or are advised by these groups through advisory boards or committees. The size of the board varies from a very few to over forty. It has ultimate control of the university and normally reserves to

itself complete financial powers, including the appointment of the president and most other staff. On occasion there will be faculty representation on the board and recently there have been attempts on the part of faculty groups of many institutions to obtain greater representation on the boards of governors. Responsibility for academic affairs is usually delegated to the senate. Composed mainly of faculty members, although there may also be alumni and representatives of non-academic groups included, it is responsible for admission, courses, discipline and the awarding of degrees.

Although there are variations, most students enter a university or the *cours collégial* of a *collège classique* after the completion of from 11 to 13 years of elementary and secondary schooling. In from three to five years, courses of instruction lead to a bachelor's degree in arts, pure science, and such professional fields as engineering, business administration, agriculture, and education. Courses in law, theology, dentistry, medicine and some other fields are longer—usually requiring for admission completion of part or all of a first-degree course in arts or science. For those pursuing graduate studies and research, the second degree is normally the master's or *licence*—at least one year beyond the first degree—and the third is the doctorate, normally requiring at least two additional years beyond the second degree.

There are about 400 institutions of higher education in Canada, of which about 50 have degree-granting powers (not including about a score that confer degrees in theology only). Full-time enrolment in the fall of 1965 was 201,000, a 13-p.c. rise over the previous year. The tremendous increase in demand for university places in recent years has resulted in a rapidly intensifying crisis in the financing of higher education, and a commission under the chairmanship of Dean Vincent Bladen of the University of Toronto was set up in 1963 by the then Canadian Universities Foundation, now the Association of Universities and Colleges of Canada, to study the financing of higher education in Canada. The Commission presented its report in the fall of 1965; among its recommendations were many referring to increased federal support for the universities.

In addition to the full-time university-grade enrolment mentioned above, almost as many students are enrolled at the pre-matriculation level or are taking university-grade courses on a part-time basis, whether in the evenings, during summer session or by correspondence. In 1964-65 over 33,000 students graduated with first degrees or equivalent diplomas, over 4,000 graduated at the master level, and 569 earned Ph.D. or equivalent doctoral degrees.

### Adult Education

A variety of opportunities is provided to adults for further academic, vocational and cultural experiences beyond the regular full-time school system for young people. Each province has developed its own programs, operated mainly by local school boards and provincial universities and supplemented by independent universities and private organizations. The Federal Government sponsors some adult education programs and provides grants-in-aid to the province for others. Co-ordination of these programs is secured through voluntary associations at national and provincial levels.

In 1964-65, total course enrolment in adult education (as defined by UNESCO) was well over 3,000,000. Two thirds of the enrolment was in professional and vocational training, including university-sponsored refresher courses and technical, trade, agricultural and business courses, under various auspices. Another 18 p.c. was in health and social education courses, including courses in marriage preparation, citizenship training, first-aid, water safety, child care, nutrition, and courses designed to assist in the treatment or prevention of specific diseases. Academic courses leading to a high school diploma or university degree accounted for nearly 8 p.c. of the total enrolment and fine arts and other cultural subjects for the remainder.

A survey of participants in further education, taken in 1960 using a 1-p.c. sample of the population 15 years of age or over, indicated that a typical student was male, married, about 31 years of age, had completed secondary schooling and had worked in a clerical or similar occupation.

Many public and private institutions and organizations also sponsor informal public lectures, film showings, guided tours, musical and dramatic performances and similar activities of an educational nature for adults. Workshops, conferences and residential adult education, as well as regular courses, help to prepare those who staff these activities.

### **How Education Costs are Met**

In 1964, about 8 p.c. of Canada's total national income was spent on formal education. Almost 19 p.c. of all municipal, provincial and federal revenue went for education and of the amount so spent, the municipalities provided 32 p.c. and the provinces 45 p.c.

As stated on p. 340, the actual operation of public elementary and secondary schools is in the hands of the local elected or appointed school boards which determine the budgets and therefore the amount of taxes required for school purposes. In most cases, these taxes are levied and collected for the boards by the municipalities; however, in those areas where there is no municipal organization the school boards have the power to levy and collect taxes for school purposes. At present, local governments provide about half of the cost of operating the public schools, provincial grants provide over 46 p.c. and the remainder is obtained from various other sources. Except in Newfoundland, fees are almost non-existent. Four provinces—British Columbia, Alberta, Manitoba and Nova Scotia—pay operating grants on an equalization formula and thus ensure at least a minimum level of education throughout the province; the standard is determined either in terms of so much per pupil, or from an established salary scale for teachers with a prescribed teacher-pupil ratio, or by some combination of these.

In Newfoundland where municipal organization scarcely exists outside certain larger centres, there are three school-tax areas (centres). Consequently only about 1.2 p.c. of school revenue is provided by local taxation; the province provides about 87 p.c. and most of the remainder is paid by parents in the form of fees. In Prince Edward Island where there is no municipal organization outside of the cities of Charlottetown and Summerside, the school boards levy and collect property and poll taxes but the province provides about two thirds of the operating costs. Ontario and Saskatchewan make use of various equalization and incentive grants and New Brunswick uses a combination of a basic grant per pupil and special grants. Most provinces provide grants for school buildings and equipment, establish loan funds, and guarantee debentures for school purposes and assist in selling them.

In 1964, universities and colleges received 62 p.c. of their current operating funds from provincial governments and the Federal Government, 25 p.c. from fees, 3 p.c. from endowments and gifts and 10 p.c. from a variety of other sources. Private schools and colleges are normally supported by student fees, endowment income, and gifts and support from sponsoring bodies.

### **Trade and Technical Education and Training**

Increasing use of automated processes in business and industry is resulting in a shrinking market for unskilled and semi-skilled workers. Early school dropouts are finding it increasingly difficult to find suitable employment and many are now trying to acquire in their adult years the general education or training in the skilled trades that they missed in their youth. Those persons still in the regular school system are tending to remain longer and go farther in the system, partly because of the changing attitudes of society toward education and partly for economic reasons.

Hand in hand with this growing demand for better educational facilities, educators are striving to provide comprehensive programs at all levels to meet the needs not only of the university-bound but also of the great majority who require adequate preparation for early entry into the labour force. It is now accepted that vocational education for adults as well as for youths is a public responsibility which must be provided, as needed, throughout man's working life. Education of this nature is of national concern and has a direct impact upon material prosperity, the national economy and the standard of living.

The pattern of vocational education in Canada varies from province to province and there are variations within the provinces. However, there are three basic types of institute offering vocational education—secondary schools, trade schools and post-secondary institutes of technology. Many municipal school boards provide vocational courses as part of the regular secondary school program in technical or composite-type schools. Students in these schools get some general vocational training or training in certain specific fields, such as typing or auto-mechanics, along with instruction in general academic or cultural subjects.

Trade schools, on the other hand, are open only to those who have passed the provincial school-leaving age and have left the regular school system. These schools offer specialized training and their purpose is to develop competent tradesmen. Courses at the trade level do not usually require high school graduation; the grade level demanded, which varies according to province or trade, ranges from grade 8 to grade 12.

The third type, the institutes of technology, operate at a higher level of training. Enrolment in the institutes presupposes high school graduation or at least high school standing in such relevant subjects as mathematics and the sciences. Graduates from institutes of technology are awarded diplomas of applied arts or diplomas of technology and form an essential link between professional engineers or administrators on the one hand and qualified craftsmen on the other. Most of the institutes of technology and trade schools across Canada are provincially operated.

In addition to the vocational education and training provided by these three types of publicly operated schools, many private business colleges and trade schools offer a wide variety of business, trade and technical courses, some through correspondence. Vocational education is also carried out under a system of apprenticeship training. Such training is given mainly on the job, with classes taken at the trade schools either during the evening or on a full-time basis during the day for periods ranging from three to 10 weeks a year.

Recognizing the importance of a high level of occupational and technical competence in the economic development of the country, the Federal Government through the Technical and Vocational Training Branch of the Department of Manpower and Immigration assists the provinces in the development of programs of technical education at different levels—for youth preparing to enter the labour market, for trade and other occupational training and re-training of adults (pre-employment and up-grading courses), and for advanced technical training. To this end, the Technical and Vocational Training Assistance Act was passed by the Federal Government in 1961 to provide financial assistance to the provinces for vocational training. The following specific measures were agreed upon by the federal and provincial governments: (1) a capital assistance program; (2) nine other programs covering technical and vocational high school training, technician training, trade and other occupational training, training in co-operation with industry, training of the unemployed, training of the disabled, training of technical and vocational teachers, training for federal departments and agencies, and student aid; and (3) an Apprenticeship Training Agreement.

The need for further research into the whole field of manpower needs prompted the later addition of a tenth program to the nine mentioned under (2) above. This program—manpower requirements and manpower training research—is designed to stimulate and encourage research projects undertaken in the provinces for providing information relating to technical and vocational training and manpower requirements, including the improvement of training programs and methods and the determination of manpower requirements. The federal contribution is 50 p.c. of provincial expenditures.

The capital assistance program, under which the Federal Government pays 75 p.c. of the provincial expenditure up to a specified total for each province, has given a tremendous impetus to the development of training facilities. During the period Apr. 1, 1961 to Mar. 31, 1966, projects valued at over \$1,102,000,000 were approved, which, when all completed, will provide a total of 352,145 new places for students, most of whom will be enrolled in two- or three-year courses. These included the construction of 455 new high schools with facilities for vocational training plus major additions to 116 such schools; construction of 70 new trade schools and enlargement of 91 existing trade schools; and construction of 18 new technical institutes plus major additions to 20 existing institutes. In addition, 129 minor projects were undertaken involving extension to existing schools. The additional facilities are summarized by province as follows:—

<i>Province or Territory</i>	<i>New Schools</i>	<i>Major Projects Involving Additions to Existing Schools</i>	<i>Minor Projects Involving Additions to Existing Schools</i>	<i>New Student Places</i>
	No.	No.	No.	No.
Newfoundland.....	13	1	2	3,570

<b>TOTALS.....</b>	<b>543</b>	<b>227</b>	<b>129</b>	<b>352,145</b>

In addition to assisting financially with the provision of physical facilities for training, the Federal Government shares in the operating costs of the various programs conducted under the Technical and Vocational Training Agreements, including the Apprenticeship Training Agreement. These programs are closely correlated with the common objectives of training the country's labour force at all levels below university and in all fields.

Of particular concern is the need to up-grade both the educational and vocational competence levels of those already in the labour force. The Federal Government undertakes to share the expenditures made by employers in developing and operating approved training programs for their employees, particularly basic training for skill development, re-training of technologically displaced persons, and apprenticeship training; higher level and other training projects are also encouraged. A Manpower Consultative Service has been established to assist industry with problems encountered in the fields of manpower training and employment and to take part in the manpower research program.

A limited survey of organized training programs for apprentices, technicians, first-line supervisors and skilled tradesmen in such fields as manufacturing, transportation and communications, mining, quarrying and oil wells, and public utilities was conducted by the Dominion Bureau of Statistics in 1963 in co-operation with the Economics and Research Branch of the Department of Labour. Results revealed that almost 17 p.c. of the establishments surveyed conducted some organized training programs, with an incidence of 8 p.c. for establishments employing from 15 to 50 persons and 25 p.c. for those with 50 or more employees. In addition to the establishments that reported some form of organized program for their staffs, many others indicated that they gave tangible encouragement to individual employees by contributing to the payment of fees for courses or by other means.

### Federal Contributions to Education

Some 24 Federal Government departments or agencies contribute in one way or another to education. Interest in education in the provinces by the Federal Government stems from its realization of the contribution of schooling to production, services and trade, and the benefits from research. The chief contributions are therefore sums or grants to assist the provincial departments with their vocational programs and grants to the universities. The University Grants Program is administered by the Association of Universities and Colleges of Canada with amounts based on a rate of \$2 per head of population (increased to \$5 for the school year 1966-67), the provincial portions being allocated to the universities according to their full-time enrolment. The student loans program is operated under the Canada Student Loans Act (SC 1964, c. 24), assented to July 28, 1964, when \$40,000,000 was set aside to enable full-time students to borrow up to \$1,000 annually, interest-free for five years—the \$5,000 or less to be repaid with interest commencing six months after the student has graduated. The loan scheme is operated by the chartered banks with the students being approved for loans by the universities and institutes of technology. The Federal Government guarantees the loans and pays the interest while the student is attending college. The amount allocated will be increased year by year in proportion to the increase in the number of persons 18-24 years of age; in 1965-66 it was \$60,000,000.

Under the Technical and Vocational Assistance Act (SC 1960-61, c. 6), the Federal Government, until 1975, contributes 75 p.c. of the total spent by a province on buildings and equipment for approved projects as determined under the agreements between the federal and provincial governments which cover some ten programs. These programs cover high school vocational classes, trade schools, institutes of technology, organized training on-the-job, apprenticeship, rehabilitation, management education, etc. (see also p. 347). As already mentioned (p. 348), the capital expenditure for vocational training in the provinces during the period Apr. 1, 1961 to Mar. 31, 1966 totalled over \$1,102,000,000; of this amount, over \$620,000,000 came from the federal coffers.

The Federal Government through the Canada Council in 1957 provided an amount of \$100,000,000, half of which was to be distributed among the universities for specified building and equipment purposes, similar to the distribution of grants. Interest from the remaining \$50,000,000 was to be used to assist in the development of the arts, humanities and social sciences mainly through scholarships (see pp. 375-376).

Other contributions are more indirect and include scholarships, research grants and reports or services of value to the school. Research grants are made by the National Research Council, the Defence Research Board, the Department of National Health and Welfare, the Department of Manpower and Immigration and other agencies. Some Departments such as Agriculture, Health and Welfare, etc., provide materials and publica-

tions of value in the school programs and the National Museum, the National Gallery, the National Film Board and the Canadian Broadcasting Corporation contribute directly or indirectly to various school programs (see pp. 365-377).

More directly, the Federal Government is responsible for the education of the Eskimos, Indians and white persons in the Territories (see p. 343), the Indians on the reserves, prisoners in penitentiaries, members of the Armed Services and their dependants and in-service training for permanent personnel. It also assists in citizenship training and other out-of-school informal education activities.

**External Aid.**—Some 11,000 full-time university students, a large proportion of them in the graduate schools, come to Canada each year from many countries; the largest number are from the United States although the number from Commonwealth and other countries is increasing very rapidly. The external enrolment in 1965 represented about 5.5 p.c. of the total enrolment. The number of such students is now about double the number of Canadians studying abroad. (See Table 9, p. 359.)

Canada's External Aid Office is responsible for the operation and administration of external assistance programs, including educational assistance to Commonwealth and other countries. In the academic year 1965-66, such assistance consisted of 439 teachers including teacher college personnel, 101 university staff members sent out individually or in teams, and 435 (calendar year 1965) technical advisers in vocational education, health and welfare, government administration and other areas as well as the provision of such services as television facilities, film units, farm forums and radio broadcasts. More than 5,000 persons under the UN agencies and Commonwealth scholars have been trained in Canada since 1950; the number enrolled in 1965-66 was 2,538, almost double the 1,412 in 1964-65. The objective of this training is the development of an indigenous training capability in the emerging countries and persons trained in Canada are expected to return to their homelands to convey their skills to others either in educational institutions or in informal situations.

From 1960 to 1965 Canada's expenditures abroad on capital projects in aid of education amounted to about \$7,000,000. Capital assistance includes the building and equipping of educational institutions and the provision of Canadian staff for a number of years. This staff is replaced by native persons after they receive appropriate training in Canada. The construction of a trades training centre in Ghana is an example of this type of project. Other major projects include Canada Hall, a residence for the University of the West Indies in Trinidad; technical equipment to schools in Malaysia and Tanganyika; and audio-visual equipment, handicraft supplies and other teaching aids to various countries.

In 1965-66, under the Commonwealth Scholarship and Fellowship Plan which began in 1960, some 222 Commonwealth students were brought to Canada (see also p. 179).

Canada has a number of voluntary agencies interested in aiding students from other countries, several of which receive some assistance from the Federal Government. Among these are the Canadian University Service Overseas, the African Students Foundation and the World University Service of Canada.

### Section. 3—Statistics of Schools, Universities and Colleges

Elementary and secondary schools may be classified as either publicly controlled or private. The publicly controlled schools include: the public and separate schools under local school boards—by far the most numerous group; provincial schools which at this

level are limited mainly to trade schools, correspondence courses, and special schools for the blind and deaf; and federal schools for Indians, for children in the Northwest Territories, and for the children of members of the Armed Forces overseas. Private schools may be academic, business (commercial), trade, technical, correspondence or even a combination of these.

Institutions of higher education may be provincial, church, independent universities and colleges, or federal military colleges. In addition there are institutes of technology, teachers' colleges, theological institutions and schools for such specialized fields as nursing, agriculture, paper-making, fisheries, graphic and fine arts, languages, etc. Some of these are provincial and some private.

Most organized classes for adults operate under the auspices of universities, colleges, local school boards, churches or community organizations.

Table 1 shows full-time enrolment at all levels each year for the period 1956-57 to 1965-66 and Table 2 shows the number of schools, teachers and pupils for all types of education institutions, classified by province, for the school year 1964-65. In all types of schools the number of pupils has been increasing. The increase was first noticed at the elementary level some six years after the birth rate began to rise during the war years. About eight years later the children born during the War were entering high school and four years later they began entering university. The number of teachers is rather closely related to the number of students although the trend is toward larger classes. On the other hand, the number of schools has remained fairly constant, the increase caused by the construction of new and larger schools in urban areas being counterbalanced by the closing of many one-room rural schools.

**1.—Full-Time Enrolment in Elementary and Secondary Schools, and in Universities and Colleges, School Years 1956-57 to 1965-66**

School Year	Elementary and Secondary Schools <sup>1</sup>			Universities and Colleges
	Elementary Grades <sup>2</sup>	Secondary Grades	Total	
	No.	No.	No.	No.
1956-57.....	2,842,501	653,938	3,496,439	78,504
1957-58.....	2,959,467	646,360	3,605,827	86,754
1958-59.....	3,084,346	748,098	3,832,444	94,994
1959-60.....	3,208,269	802,690	4,010,959	101,934
1960-61.....	3,319,450	882,247	4,201,697	113,864
1961-62.....	3,404,654	1,002,723	4,407,377	128,894
1962-63.....	3,490,093	1,099,394	4,589,487	141,388

<sup>1</sup> Day, residential and hospital schools administered by the Federal Government. <sup>2</sup> Also included with "Higher Education". <sup>3</sup> Under Programs 3, 4, 5, 6 and 8 of the Federal-Provincial Agreement, for fiscal year 1963-64. <sup>4</sup> Includes indentured apprentices taking full-time, part-time and correspondence courses. <sup>5</sup> Included with Nova Scotia. <sup>6</sup> Includes enrolment in courses sponsored by public libraries, business colleges, teacher-training institutions and Federal Government departments not distributed by province.

An attempt has been made to tabulate total expenditure on education, including formal education at all levels, vocational training of all types and also expenditure on cultural activities related to education such as adult night classes, fine arts and handicraft courses, and libraries, museums and art galleries. Such expenditure for the year 1962 is presented in Table 3, classified by source. Details of income of school boards for publicly controlled elementary and secondary schools for the years 1961-63 are given at pp. 357-358 and financial statistics for universities and colleges at pp. 361-362.

<sup>2</sup> Capital grants from the Federal Government are

included in above items.

<sup>3</sup> Limited to reported expenditures of public funds.

<sup>4</sup> Includes capital costs

from current funds.

## Subsection 1.—Elementary and Secondary Schools

**Control.**—As stated on p. 339, direct control and operation of public schools is by school boards, which operate under school laws and regulations. School boards may be boards of larger units, local boards within larger units or independent boards for rural schools, towns or cities, the members of which may be all elected, partly elected and partly appointed or all appointed; some schools are operated by trustees appointed by the province in lieu of a board. As their designations imply, private schools are administered by private organizations and federal schools by federal authorities.

Table 4 gives the number of active public school boards and school trustees in each province as at January 1966.

## 4.—Active School Boards and School Trustees, by Province, as at January 1966

<sup>1</sup> Boards of Education, all members of Toronto Metropolitan Board.

**Enrolment.**—Table 5 shows enrolment of all elementary and secondary pupils in Canada and in Department of National Defence schools overseas, and classifies them by grade. Private schools and schools for Indian and Eskimo children are included in these figures. Enrolment in private schools accounted for 4 p.c. of the total 1964-65 enrolment at the elementary and secondary levels. Schools operated by Federal Government departments, that is, schools for Indian children, schools in the Territories and overseas schools for children of Service personnel, accounted for about 1 p.c. of the total.

School enrolment has been increasing in recent years much more rapidly than the general population. Annual rates of increase in total school enrolment for the four most recent years ranged from 4.0 p.c. to 4.2 p.c.; the country's population during the same period increased annually by amounts varying from 1.7 p.c. to 1.8 p.c.

<sup>1</sup> Includes Ungava District of Quebec.  
1,259 pupils not classified by grade.

<sup>2</sup> Total for Yukon Territory was 3,142 pupils.

<sup>3</sup> Includes

**Teaching Staffs.**—Between the school years ended in 1945 and 1965 the number of teachers in the publicly controlled schools of the ten provinces increased 150 p.c. from 75,892 to 189,705. The number of men teachers increased 313 p.c. and the number of women teachers 108 p.c.

In 1965, in nine provinces (excluding Quebec), 85.1 p.c. of the teachers had at least senior matriculation and one year of teacher-training, and an additional 7.8 p.c. had one year less schooling. Median experience in the eight provinces outside of Quebec and Ontario has increased slowly from 7.0 years in 1945 to 8.1 years in 1965, despite the large number of new teachers each year. Many of these have been recruited by the cities, where the median experience has declined from a high of 16.7 years in 1946 to 11.9 years in 1955 and 8.6 years in 1965.

Between 1945 and 1965 the median salary for all teachers in the nine provinces other than Quebec increased 310 p.c. from \$1,207 to \$4,954. That for teachers in one-room schools increased 234 p.c. from \$1,019 to \$3,402. Naturally, the rate of increase from one year to the next has fluctuated considerably, ranging from 16.8 p.c. between 1947 and 1948 to 2.4 p.c. between 1962 and 1963. The increase between 1964 and 1965 was 4.9 p.c. as compared with 4.4 p.c. between 1963 and 1964.

<sup>1</sup> Fully qualified at the elementary level are teachers with junior matriculation and two or more years, or senior matriculation and one or more years of professional training. At the secondary level they are teachers with junior matriculation and four or more years, or senior matriculation and three or more years of schooling, of which one year was professional training.

<sup>2</sup> Comprises teachers and principals instructing or supervising elementary grades only, and those instructing or supervising both elementary and secondary grades in rural schools with five or fewer classes. Teachers and principals in Ontario are classified as elementary according to the provincial *Report of the Minister, 1964*.

<sup>3</sup> Comprises teachers and principals instructing or supervising secondary grades only, and those instructing or supervising both elementary and secondary grades in urban centres and in rural schools with six or more classes. Teachers and principals in Ontario are classified as secondary according to the provincial *Report of the Minister, 1964*.

**Financial Support.**—Table 7 shows details of the income of public school boards for the years 1961-63. In most provinces, local taxation is the most important source of revenue followed by provincial government grants. In 1963, all other sources of income accounted for 3 p.c. of total current revenue. (See also p. 346.)

Not all provinces collect and publish figures for debenture indebtedness, although it is the usual practice in all provinces, except Newfoundland, for boards to finance new construction, at least in part, by issuing debentures. Provincial aid toward capital expenditures may take the form of a percentage of total cost, a fixed amount per classroom or assistance with debenture debt charges. Many provinces guarantee debentures issued by school boards and others assist in marketing them.

### 7.—Income of School Boards for Publicly Controlled Elementary and Secondary Schools, by Province, Years Ended Mar. 31, 1961-63

NOTE.—The receipts shown in this table do not include any amounts raised by loans or the sale of bonds or debentures as all revenue of this nature must be repaid ultimately with money raised by local taxation. Figures from 1914 are given in the corresponding table of previous Year Books beginning with the 1936 edition.

### Subsection 2.—Universities and Colleges

**Institutions.**—An institution of higher education in Canada is generally defined as one that offers one or more years of work beyond the most advanced high-school grade in the province in which it is located, with all or part of the work offered being acceptable for credit toward a university degree or equivalent diploma. The definition thus excludes institutions offering technical and vocational post-high school courses for which credit is not given.

In 1965-66 there were nearly 400 institutions of higher education in Canada, of which about 50 have degree-granting powers (not including about 20 that confer degrees in theology only).

**Enrolment.**—Full-time university-grade enrolment continues to increase year by year and indications are that enrolments may well be double the 1965-66 figure of 205,888 in about six years. Table 8 shows full-time enrolment by province for the academic years ended 1963-66. In addition to full-time students, there were about 74,000 part-time university-grade students (including over 7,700 graduate students) in attendance during the regular 1963-66 winter session and over 6,500 students taking university-grade credit correspondence courses. University-grade summer school enrolment was over 62,000 in 1964 and over 70,000 in 1965.

**8.—Full-Time Regular Winter Session University-Grade Enrolment, by Province, Academic Years Ended 1963-66**

Foreign enrolment has risen considerably during the past decade, with a larger proportion of students from countries other than the United States and Britain coming to Canadian institutions, as shown in Table 9. In 1965-66 about one of every 18 full-time university students in Canada was a resident of a country other than Canada. The United States, Hong Kong, Trinidad and Tobago, India and Britain each accounted for over 500 students, and France, Pakistan, Malaysia, Viet-Nam, Nigeria, Jamaica, the Republic of China, Japan, Germany, Guyana and Haiti contributed from 100 to 400 each. About 150 other countries or territories were represented in the figures.

<sup>1</sup> Before 1949, Newfoundland was considered as being a country outside Canada.

<sup>2</sup> Data from the Institute of International Education, New York.

<sup>3</sup> Data from the Association of Commonwealth Universities, London, England. Newfoundland is included with Canada for all years.

**Graduates.**—Table 10 gives figures for graduates in most faculties for the academic years ended 1963-65. A total of 33,497 bachelor and first professional degrees and equivalent diplomas were granted in 1964-65. Included in the total were 10,416 women.

### 10.—Graduates from Universities and Colleges, Academic Years Ended 1963-65

NOTE.—Figures for 1920-36 are given in the 1938 Year Book, pp. 993-997, and for 1937-62 in the corresponding table of subsequent editions.

<sup>1</sup> Includes Bachelors of Letters and Social Science.

<sup>2</sup> Includes Bachelors of Accounting and Secretarial Science.

<sup>3</sup> Includes Bachelors of Accounting and Secretarial Science.

<sup>4</sup> Includes diplomas in Architecture from the School of Architecture of Montreal.

<sup>5</sup> Prior to 1964-65, l'Université de Montréal and l'Université Laval granted the M.D. degree only after the intern year. In 1964-65 they began to grant it before the intern year, and for that year both institutions had two graduating classes.

<sup>6</sup> Includes all diplomas and degrees except for Bachelors of Divinity.

<sup>7</sup> Includes M. Com., M.Ed., M.Paed., M.S.W., as well as M.A. In some institutions, M.Sc. degrees are included with M.A.s.

<sup>8</sup> Includes M.A.Sc., M.S.A., M.Sc.F., M. Arch., M.V.Sc., M.Sc. Dent., M. Surgery (where conferred separately) as well as M.Sc.

<sup>9</sup> The "Licence" in the French-language universities is the next degree in advance of the Bachelor.

**Teaching Staffs.**—Table 11 shows the trend in university teaching staffs since 1957.

### 11.—Full-Time Teaching Complement in Universities and Colleges, Academic Years Ended 1957-66

NOTE.—Figures are estimates based on returns from institutions representing about 50 p.c. of the total enrolment and include some research personnel and junior and sessional lecturers and assistants.

<sup>1</sup> Includes 36 ungraded professors not distributed above.

**Finances.**—Table 13 gives a ten-year series of the finances of Canadian universities. Since 1954 they have received more than one half of their revenue from government grants and a very small amount from municipal councils. Beginning with the academic year 1951-52, the Federal Government has provided university grants to help meet current operating costs. These grants were originally paid on the basis of 50 cents per head of population in each province and the eligible institutions received their share of the provincial allotment according to the number of full-time students in undergraduate and graduate courses. The rate of grant was increased to \$1.00 per capita in 1956-57, to \$1.50 in 1958-59 and to \$2.00 in 1962-63. The Province of Quebec did not accept this grant for the years up to 1955-56. From 1956-57 to 1959-60 the payments refused by Quebec were held in trust by the Canadian Universities Foundation (now the Association of Universities and Colleges of Canada), which administers the fund. In 1960-61 the Quebec Government and the Federal Government negotiated a new tax-sharing agreement under which Quebec provides its own grants and is reimbursed by an abatement of corporation tax. Table 14 gives details of the federal grants for each of the academic years ended 1964-66.

The Federal Government also provides assistance to universities through the University Capital Grants Fund which is administered by the Canada Council. The original amount in the fund was \$50,000,000 (interest and profits to Mar. 31, 1966 increased it to over \$67,000,000), to be granted in amounts not exceeding 50 p.c. of specific building or capital equipment projects, having regard to the population of each province. Up to the end of March 1966, a total of almost \$58,000,000 had been authorized. Grants are paid in four equal instalments spread over the period of construction so that there is a time lag between approval and payment.

The Canada Council was also endowed with an additional \$50,000,000 (raised by \$10,000,000 Apr. 3, 1965), the interest on which is available for the provision of scholarships or other assistance in the fields of the arts, humanities and social sciences (see p. 376).

### 13.—Current Income and Expenditure of Universities and Colleges, Academic Years Ended 1956-65

Academic Year Ended—	Current Income					Total Current Expenditure

## Subsection 3.—Vocational Education

Table 15 summarizes the data on full-time vocational training classes. The duration of these classes may vary from three weeks taken annually by indentured apprentices at provincially operated trade schools, to three-year vocational high school courses or post-secondary courses offered in provincial institutes of technology. Numerous skills are taught, ranging from short courses in welding or typing to extended courses for instrument technicians or aircraft maintenance men. Students taking two-year or three-year vocational courses in public secondary schools may, upon completion, enter employment or may continue other formal training in a trade school or an institute of technology.

In addition to the full-time vocational courses, a great variety of part-time instruction is offered by both public and private institutions as an alternative to full-time training or as an attraction to the individual interested in a hobby.

<sup>1</sup> Enrolments of full-time students under the various programs of the federal-provincial agreements (see p. 347).

<sup>2</sup> Excludes 2,473 full-time students in one-year preparatory courses at institutes of technology.

<sup>3</sup> As at Mar.

31, 1964.

<sup>4</sup> Includes students from other Atlantic Provinces.

<sup>5</sup> Excludes 5,116 part-time students and

149 students taking formal apprenticeship courses by correspondence.

<sup>6</sup> Excludes 17,048 part-time students

and students taking correspondence courses from private trade schools and business schools.

<sup>7</sup> Excludes

21,000 part-time students and about 3,100 students taking correspondence courses.

### Subsection 4.—Adult Education

Adult education benefits from a wide variety of sponsors, both public and private, but most important in this respect are government departments and agencies at all three levels. Although the Federal Government makes substantial contributions, provincial departments of education, of course, play the major role since education is a provincial responsibility. Other provincial departments, such as the departments of health and of agriculture, are also active in promoting education for adults.

Government-sponsored classes comprised 79 p.c. of the total adult education enrolment of 3,229,100 in 1964-65. Compared with the previous year, there was a marked increase of enrolment in agriculture but a decrease in elementary academic education. Government-sponsored lectures, film showings, exhibits, etc., claimed over 35 p.c. of the total attendance. Of the total enrolment, 7.8 p.c. was reported by 73 universities and colleges. Other sponsors were public libraries, museums and art galleries, teacher-training institutions, private trade and business schools and voluntary organizations. These institutions were responsible for a large part of the increase in enrolment.

## PART II.—CULTURAL ACTIVITIES RELATED TO EDUCATION

## Section 1.—The Arts and Education

**Fine Art Schools, Galleries and Organizations.\***—Fine art (architecture, painting and drawing, commercial and decorative arts, graphics, ceramics and sculpture) appears as an elective subject of the faculty of arts in a number of universities, where it may be taken as one of five, six or more subjects for a year or two. Five universities offer a Bachelor of Fine Arts degree:—

University of Alberta, Edmonton, Alta.  
 University of Manitoba, Winnipeg, Man.  
 Mount Allison University, Sackville, N.B.  
 Sir George Williams University, Montreal, Que.  
 University of Victoria, Victoria, B.C.

Ten universities offer a Bachelor of Arts degree with a major in fine art:—

University of British Columbia, Vancouver, B.C.  
 University of Calgary, Calgary, Alta.  
 University of Guelph, Guelph, Ont.  
 McGill University, Montreal, Que.  
 McMaster University, Hamilton, Ont.  
 Queen's University, Kingston, Ont.  
 University of Saskatchewan, Saskatoon and Regina, Sask.  
 Sir George Williams University, Montreal, Que.  
 University of Toronto, Toronto, Ont.  
 University of Windsor, Windsor, Ont.

There are many schools of art with varying academic requirements for admission. These offer diploma or certificate courses and are concerned largely with the technical development of the artist. Among those widely known are:—

Nova Scotia College of Art, Halifax, N.S.  
 École des Beaux-Arts, Quebec, Que.  
 École des Beaux-Arts, Montreal, Que.  
 School of Art and Design, Montreal Museum of Fine Arts, Montreal, Que.  
 Ontario College of Art, Toronto, Ont.  
 University of Manitoba School of Fine Arts, Winnipeg, Man.  
 School of Art, Regina Campus, University of Saskatchewan, Regina, Sask.  
 Alberta College of Art, Calgary, Alta.  
 Institut des Arts Appliqués, Montreal, Que.  
 Vancouver School of Art, Vancouver, B.C.  
 Kootenay School of Art, Nelson, B.C.  
 University of Victoria, Victoria, B.C.

Courses in these schools vary in length with the requirements of the individual student but may extend over as many as four years. In some of these schools fine crafts as well as fine arts are taught. Summer schools of art are sponsored by some of the foregoing institutions, by universities and by various independent groups. One of the more important summer schools is the Banff School of Fine Arts, affiliated with the University of Calgary. Two booklets published by the Canadian Cultural Information Centre provide details on courses in the fine arts—*Facilities for Study in the Arts in Canada* and *Some Summer Courses in the Arts in Canada*.\*

Public art galleries in the principal cities perform valuable educational services among adults and children. Children's Saturday classes, conducted tours for school pupils and adults, radio talks, lectures and concerts are features of the programs of the various galleries. Many of these institutions supply their surrounding areas with travelling exhibitions and some range even farther afield. Several organizations such as the Maritime Art Association, the Atlantic Provinces Art Circuit, the Western Canada Art Circuit, the Art Institute of

\* Further information on this subject may be obtained from the Canadian Cultural Information Centre, 56 Sparks St., Ottawa.

Ontario and the Queen's Art Circuit have been founded to carry out this sort of travelling program on a regional basis. The National Gallery of Canada conducts a nation-wide program of this nature and is the third largest circulating agency in North America. Several galleries maintain an art-lending or rental service.

Among the principal public art galleries are:—

Beaverbrook Art Gallery, Fredericton, N.B.  
 Montreal Museum of Fine Arts, Montreal, Que.  
 National Gallery of Canada, Ottawa, Ont.  
 Public Library and Art Museum, London, Ont.  
 Art Gallery of Ontario, Toronto, Ont.  
 Art Gallery of Hamilton, Hamilton, Ont.  
 Willistead Art Gallery, Windsor, Ont.  
 Winnipeg Art Gallery, Winnipeg, Man.  
 Kitchener-Waterloo Art Gallery, Kitchener, Ont.  
 Mendel Art Gallery, Saskatoon, Sask.  
 Edmonton Art Gallery, Edmonton, Alta.  
 Vancouver Art Gallery, Vancouver, B.C.  
 Art Gallery of Greater Victoria, Victoria, B.C.  
 Fathers of Confederation Art Gallery and Museum, Charlottetown, P.E.I.

Other important collections of art are housed in arts councils and university galleries. Among university galleries are:—

Fine Arts Gallery of the University of British Columbia, Vancouver, B.C.  
 University of Alberta, Edmonton, Alta.  
 University of Calgary, Calgary, Alta.  
 Norman Mackenzie Art Gallery of the University of Saskatchewan, Regina, Sask.  
 Agnes Etherington Art Centre, Queen's University, Kingston, Ont.  
 McIntosh Memorial Art Gallery, University of Western Ontario, London, Ont.  
 Hart House, and Sigmund Samuel Canadiana Gallery of the University of Toronto, Toronto, Ont.  
 Owens Museum of Fine Arts, Mount Allison University, Sackville, N.B.  
 St. John's Memorial University Art Gallery, St. John's, Nfld.  
 Creative Art Centre of the University of New Brunswick, Fredericton, N.B.  
 Sir George Williams University Art Gallery, Montreal, Que.  
 Dalhousie University Art Gallery, Halifax, N.S.

Three of the more important galleries connected with arts councils are the St. Catharines and District Arts Council, St. Catharines, Ont., the Glenhyrst Arts Council, Brantford, Ont., and the Art Gallery of the Calgary Allied Arts Centre, Calgary, Alta.

**Other Fine Art Organizations.**—Among the leading art organizations of national scope, exclusive of museums and art galleries, are:—

Association of Canadian Industrial Designers  
 National Design Council  
 Canadian Conference of the Arts  
 Canadian Craftsmens Association  
 Canadian Society for Education through Art  
 Canadian Group of Painters  
 Canadian Guild of Potters  
 Canadian Handicrafts Guild  
 Canadian Museums Association  
 Canadian Society of Graphic Art  
 Canadian Society of Painter-Etchers and Engravers  
 Canadian Society of Painters in Water Colour  
 Canadian Society of Landscape Architects  
 Federation of Canadian Woodcarvers  
 Royal Canadian Academy of Arts  
 Royal Architectural Institute of Canada  
 Sculptors' Society of Canada  
 Town Planning Institute of Canada  
 Canadian Centre for Films on Art  
 Community Planning Association of Canada.

Young members of the Saturday morning class at the Art Gallery of Ontario preparing background panels for a Christmas exhibit of Canadian-designed toys.

**The National Gallery of Canada.**—The beginnings of the National Gallery of Canada are associated with the founding of the Royal Canadian Academy of Arts in 1880. The Marquis of Lorne, then Governor General, had recommended and assisted the founding of the Academy and among the tasks he assigned to that institution was the establishment of a National Gallery at the seat of government. Until 1907 the National Gallery was under the direct control of a Minister of the Crown but in that year, in response to public demand, an Advisory Arts Council consisting of three laymen was appointed by the government to administer grants to the National Gallery. Three years later, the first professional curator was appointed.

In 1913, the National Gallery was incorporated by Act of Parliament (RSC 1952, c. 186) and was placed under the administration of a Board of Trustees appointed by the Governor General in Council; its function was to encourage public interest in the arts and to promote the interests of art throughout the country. Under this management, the Gallery increased its collections and developed into an art institution worthy of international recognition. Today, the Gallery administration comes under the aegis of the Secretary of State. The Board of Trustees, now composed of nine members representing all sections of Canada, meets twice annually. In 1960, the Gallery entered a new era in its history when the entire national collection and the staff and equipment necessary to its maintenance were transferred to new modern quarters—the Lorne Building in downtown Ottawa—which provides adequate well-lighted space for hanging the permanent collection and for displaying travelling exhibitions.

The Gallery's collections are of indisputable taste and quality. They have been built up along international lines and give the people of Canada an indication of the origins from which their own tradition is developing. The collection of Canadian art, the most extensive and important in existence, is continually being augmented by the purchase of works from the Biennials of Canadian Art and other sources. The collections include many Old Masters, among which are twelve acquired from the famous Liechtenstein collection; extensive war collections; the Massey collection presented to the Gallery during 1946-50 by the Massey Foundation; a collection of French paintings; prints and drawings; and diploma works of the Royal Canadian Academy. The prints and drawings collection consists of more than 5,000 items. The services of the Gallery include the operation of a reference library open to the public which contains more than 10,000 volumes and periodicals on the history of art and other related subjects.

The National Conservation Research Laboratory, established in 1964, provides technical information on works of art from public and private collections across Canada

and is responsible for the conservation of the national art collections. In addition, studies are carried out on the effects of environment on works of art and on the durability of artists' materials.

An active program of exhibitions, lectures, films and guided tours is maintained for visitors to the Gallery in Ottawa. The interests of the country as a whole are served by circulating exhibitions, lecture tours, publications, reproductions and filmstrips prepared by the National Gallery staff. The distribution of films is handled by the Canadian Centre for Films on Art. The Gallery promotes interest in Canadian art abroad by participating in international exhibitions such as the Biennials of Venice, São Paulo and Paris, and by preparing major exhibitions of Canadian art for showing in other countries. At the same time it brings important exhibitions from abroad for circulation in Canada.

**Performing Arts Schools.**—Music, the most widespread of the performing arts (which also include opera, drama, ballet and dance), is a degree course in a number of universities. The following offer degree courses:—

- Acadia University, Wolfville, N.S.—B.A. with music major, and Mus. B.
- University of Alberta, Edmonton, Alta.—B.A. major and Mus. B.
- Brandon College, Brandon, Man.—B. Mus. (Education)
- University of British Columbia, Vancouver, B.C.—B.A. major and B. Mus.
- University of Calgary, Calgary, Alta.—B. Mus.
- Laval University, Quebec, Que.—B. Mus.
- University of Manitoba, Winnipeg, Man.—B.A. major and B. Mus.
- University of Montreal, Montreal, Que.—B. Mus. and D. Mus.
- McGill University, Montreal, Que.—B. Mus.
- University of Moncton (affiliated college Notre Dame d'Acadie), Moncton, N.B.—B. Mus.
- Mount Allison University, Sackville, N.B.—B.A. major
- Queen's University, Kingston, Ont.—B.A. major
- University of Toronto, Toronto, Ont.—B. Mus., M. Mus. and D. Mus.
- University of Western Ontario, London, Ont.—B.A. major
- St. Francis Xavier University (affiliated College Mount St. Bernard), Antigonish, N.S.—B.A. major
- Université Saint-Louis, Edmundston, N.B.—B. Mus.
- University of Saskatchewan, Saskatoon, Sask.—B.A. major and B.Ed. music
- Université de Sherbrooke, Sherbrooke, Que.—B.A. major (affiliated Collège du Sacré-Cœur).
- University of Victoria, Victoria, B.C.—B. Mus.

Advanced instruction in music is also given at the Conservatoire de Musique et d'Art Dramatique in both Montreal and Quebec. Opera may be studied at the Royal Conservatory Opera School of the University of Toronto where advanced students work in close collaboration with the Canadian Opera Company and also at the Conservatoire de Musique et d'Art Dramatique and the Banff School of Fine Arts (summer), Banff, Alta.

A Bachelor degree with specialization in drama may be obtained at Queen's University and the Universities of Alberta, Saskatchewan and British Columbia. Advanced instruction is also given during the summer at the Banff School of Fine Arts. The University of Toronto recently announced its first chair of drama, although it does not expect to offer degrees immediately. The University of British Columbia hopes to offer a post-graduate degree in theatre leading to the M.A. Some graduate courses are offered at the University of Saskatchewan and at the University of Alberta a degree course in drama is available. The National Theatre School of Canada offers complete practical training for talented students. It is bilingual, winter courses being held at Montreal, Que., and summer at Stratford, Ont. Three years are required for the acting course, and two for the technical and production studies. The Manitoba Theatre School at Winnipeg is also of importance.

The National Ballet School at Toronto is the only residential ballet school in Canada. It offers academic studies together with practical instruction. Professional instruction is also offered by two other major Canadian ballet companies, Les Grands Ballets Canadiens, Montreal, and the Royal Winnipeg Ballet, Winnipeg. The Canadian School of Ballet is located in Kelowna, B.C., and advanced ballet training is given during the summer at the Banff School of Fine Arts.

## Museums

Modern museums, in Canada and elsewhere, are breaking away from the old concept of being mere repositories and are assuming an important role as educational and cultural centres. They have an advantage over other agencies of education in that they are able to provide, for study and exhibition, actual, original objects as well as descriptions and pictures of such objects. Canadian museums of history and science offer many educational services to the public through exhibits, guided tours, lectures, and scientific and popular publications. The following museums have staff members who are specifically charged with organizing programs in education and providing extension services:—

Nova Scotia Museum, Halifax, N.S.

McGill University Museums, Montreal, Que.

National Museum of Canada, Ottawa, Ont.

Royal Ontario Museum, Toronto, Ont.

Saskatchewan Museum of Natural History, Regina, Sask.

Other museums that conduct educational and extension programs using the regular curatorial and administrative staff are:—

The New Brunswick Museum, Saint John, N.B.

Museum of the Province of Quebec, Quebec, Que.

The Manitoba Museum, Winnipeg, Man.

Provincial Museum of Natural History and Anthropology, Victoria, B.C.

Direct work with schools may involve the holding of classes within the museum or visits of museum lecturers, with exhibits, to the schools. More informal are the guided tours for visiting school classes, the lending of specimens, slides, filmstrips or motion picture films to schools, and the training of student-teachers in the educational use of the museum. A number of museums have special programs for children, not directly associated with school work. These include Saturday lectures and film showings, activity groups, nature clubs and field excursions.

For adults, museums offer lectures, film showings and guided tours, the latter usually available throughout the year. Staff members may be sent to give lectures to service clubs, church groups, parent-teacher associations and hobby clubs. The latter, such as naturalists' groups, mineral clubs and astronomy societies, may use the museum as their headquarters. Travelling exhibits are prepared for showing at local fairs, historical celebrations and conventions. At least seven Canadian museums have conducted regular radio or television programs and others have made occasional contributions. Some historical museums stage annual events during which the arts, crafts or industries represented by the exhibits are demonstrated to the public.

**The National Museum of Canada.\***—The National Museum originated in the Geological Survey of Canada and its early history is inseparable from that institution. The first united Parliament of Upper and Lower Canada met in Montreal in 1841. In July of that year the Natural History Society of Montreal and the Literary and Historical Society of Quebec petitioned the Government to carry out a geological survey. As a result, a resolution was passed in the Estimates on Sept. 10 to defray the expenses of a Geological Survey of the Province of Canada.

William E. Logan was appointed the first director of the Geological Survey in 1842. He and his assistant, Alexander Murray, undertook their first field work in 1843, and their collections formed the humble beginnings of the National Museum. Logan was much more than a mere geologist and his interests extended to other branches of natural science. His diaries contain accurate drawings of named plants. He wrote in his annual report for the

\* Prepared by Dr. A. W. Banfield, Director, Natural History Branch, and Dr. R. Glover, Director, Human History Branch, National Museum of Canada, Ottawa.

year 1852-53: "It may be a consideration whether a growing country like Canada could not afford to anticipate what future importance may require in the nature of a national museum and at some future time not far distant, erect an appropriate edifice especially planned for the purpose."

In the meantime, the officers of the Geological Survey continued to collect for the geological museum. In 1856, Elkanah Billings, a palaeontologist, was added to the staff, the first of a number of specialists, and the legislation passed that year to continue the work of the Geological Survey specified the establishment of a geological museum, open to the public, to exhibit specimens, books and instruments.

In 1874, the practice of recording the number of visitors to the Museum was commenced; from May 1874 to April 1875 the number of visitors was 1,017 and by the year ended April 1896 it had reached 31,595. In 1874, the distribution of specimens of minerals, rocks and other natural history objects to schools was started with a donation to the Board of School Teachers of Elora, Ont. The first organized Museum lecture program was undertaken in 1912, with a series of lectures for young people after school; by 1915, Saturday morning lectures for children and evening lectures for adults—both features of the Museum program today—were in operation.

The scope of the Museum was enlarged in the "Act to make better provision respecting the Geological and Natural History Survey of Canada and for maintenance of the Museum in connection therewith", of Apr. 28, 1877. In that Act the Survey was instructed "to study and report upon the flora and fauna of the Dominion" and "to continue to collect the necessary materials for a Canadian museum of natural history, mineralogy and geology". As early as the Act of 1856, the Geological Survey of Canada had been authorized "from time to time" to distribute publications relative to the Survey. From this authority developed the Museum's celebrated series of scientific bulletins presenting the researches of its staff.

The Act of 1877 established the Geological Survey and the Museum on a continuing basis and permitted the appointment of specialists in connection with natural history research. John Macoun was appointed to establish the division of biology in 1882. He was an eminent botanist who had accompanied the expedition of Sanford Fleming to explore Western Canada in 1871. Macoun's report of 1874 laid the groundwork for the establishment of western Canadian agriculture. He also published a catalogue of Canadian birds. In 1895 under the third Director of the Geological Survey, George M. Dawson, the Museum entered the field of Canadian anthropology.

Prior to 1880, the Museum occupied several buildings in Montreal but that year the Geological Survey moved to Ottawa, occupying the former Clarendon Hotel on Sussex Street. Construction of the Victoria Memorial Museum building was started in 1904 and the Geological Survey moved in in 1910. The Museum began an expanded program of research and exhibition under the direction of R. W. Brock, then Director of the Geological Survey of Canada. Unfortunately this program was curtailed during World War I because the burning of the Parliament Building, in 1916, forced Parliament to occupy the Museum building until 1919. Later, expansion of the exhibition halls was handicapped by the Museum sharing its building with the National Gallery of Canada and the Geological Survey of Canada. However, in 1927, the Governor General in Council gave authority "to designate the museum branch of the Department of Mines as the National Museum of Canada"; it is now part of the Department of the Secretary of State. During the past 20 years, particularly after the appointment of Dr. Frederick J. Alcock as Chief Curator, the Museum has increased its research, education and exhibition staff in order to play a more important role in the cultural life of Canada and perform the tasks properly assigned to the National Museum of Canada. A new National Museum building will be constructed in the heart of Ottawa within the next few years.

The responsibilities of a great museum include the collection, preservation, storage and study of objects related to the various disciplines that fall under its purview. The next

step is the undertaking of research by specialists in those fields and the publication of their findings to increase the total knowledge of their subjects. Typically, museums exhibit items from their collections as intrinsically beautiful displays and also to teach the public the scientific background to the subjects. This leads to the educational program of museums which usually includes lectures, workshops, guided tours for children and activity groups, travelling exhibits, loans, library service, and radio and television programs.

The National Museum of Canada is now organized to present all these facets for the enjoyment and education of the people of Canada. It is divided into three Branches—the Human History Branch, the Natural History Branch and the Science and Technology Branch. The Human History Branch contains the Divisions of Archaeology, Ethnology and Folklore, and History, together with the Canadian War Museum and the National Aviation Museum. The Natural History Branch contains the Divisions of Zoology, the National Herbarium, and Geology and Palaeontology. Services common to these two Branches are concerned with exhibitions, educational, technical and administration functions. In 1965-66 the staff totalled 226, including 56 administrative and professional personnel, 85 technical, operational and service personnel, 41 clerical personnel and 44 casual and prevailing rate employees.

The 1966 field research program in natural history included eleven expeditions to various parts of Canada. The work included investigations of intertidal invertebrates of the Strait of Juan de Fuca and Vancouver Island, shore fishes of Newfoundland, fauna of Sable Island, fishes and molluscs of the west coast of Hudson Bay, and birds of the Alberta Rockies and northern Ontario. Study of the fossil vertebrates of the Anderson and Horton River Valleys of the Northwest Territories was continued after the exciting discovery of the first fossil toothed birds in Canada and surveys of the Pleistocene faunas in Yukon Territory. Floral investigations were conducted in northern Ontario, southern British Columbia, northeastern Quebec and the Yukon Territory.

In addition, taxonomic studies of certain invertebrate groups were sponsored at Canadian universities, as well as field investigations of fossil fishes in the Maritimes, amphibians in Alberta, and dinosaurs in southeast Alberta, by university staffs. The National Museum also participated in a number of oceanographic cruises sponsored by the Fisheries Research Board and the Bedford Basin Oceanographic Institute to the eastern Pacific, Azores and Falkland Islands. Research in peat bogs on the Queen Charlotte Islands and the ecology of fluctuating northern lakes by European ecologists was also supported.

The education program continued with weekly lectures for adults, Saturday morning film programs for children, the junior nature club, the school loan collection, children's classes, guided tours, and the Canadian collection of nature photographs. During 1965 the National Museum recorded 314,800 visitors, the Canadian War Museum 188,020, the National Aviation Museum 119,310 and the National Aeronautical Collection at Rockcliffe 68,792.

During the past five years there has been a marked growth in the research carried out by the Human History Branch. Much of this is done under contract by scholars whose work is wholly or partly financed by the Museum, on the understanding that the Museum shall receive their collections and the right to publish their reports. This system has proved valuable in forging links between the National Museum and universities or other museums, and in developing archaeology and ethnology in Canada as well as in enriching the national collection and the Museum's publications. In 1965 members of the Archaeology Division did field researches in Nova Scotia, southeastern Ontario, near South Indian Lake in Manitoba, in the Yukon Territory and on Victoria and Banks Islands in the Northwest Territories. Additional field work was done under contract in Newfoundland, Nova Scotia, Quebec, Ontario, Manitoba, Saskatchewan and Alberta and in the Arctic on Ellesmere Island, near Wakeham Bay and Igloodik. The Ethnology Division continued

its research program, both by staff members and by contract in linguistics, ethnohistory and the ethnology of the Algonkians, Athapaskans, the West Coast and Plateau Indians and the Eskimo. A conference on Band organization was held at the National Museum in late August, attended by 14 leading ethnologists from Canada and the United States. The Folklorist returned to her studies in the Gaspé region and supervised contracts for research in the Maritimes and in the Prairie Provinces. The History Division gave four contracts for the pursuit of original research, continued studies for the preparation of exhibits and made progress in the task of cataloguing.

The exhibition program in 1964-65 included a new Indian Hall and additional work in the Hall of Birds. The education program continued with weekly lectures for adults, Saturday morning film programs for children, the junior nature study club, the school loan collection, children's classes, guided tours, and the Canadian collection of nature photographs.

In 1961, the Government announced the intention to establish, as a third branch of the National Museum, a Museum of Science and Technology, which would incorporate the existing National Aviation Museum. Funds for the inauguration of this project were provided in the fiscal year 1966-67 and a Director was appointed, who will be responsible for planning the display and research activities of the new institution.

### Statistics of Museums and Art Galleries

In response to the need for information concerning the existence and operation of museums, art galleries and similar institutions in Canada, a survey was conducted by the Dominion Bureau of Statistics with the assistance of the Canadian Museums Association, provincial government departments concerned with museums and other interested individuals. The results are given in DBS publication *Museums and Art Galleries 1964* (Catalogue No. 81-529), and are summarized here in Table 1. Information was collected from a wide variety of institutions and organizations, including art galleries, art exhibit centres; historical museums, historic houses, archives; natural history museums, botanical gardens, zoological parks, aquaria, planetaria; preservation projects, public libraries.

Of the 385 institutions reporting, 44 conducted educational programs for the communities in which they were located, enrolment in the study groups numbering 18,454 children and 5,974 adults; 67 conducted extension services to other communities; 128 institutions reported the conduct of such public events as lectures, film showings, guided tours, etc., with total attendance of close to 855,000; and 101 provided local library service.

## Section 2.—The Educational Functions of the Canadian Broadcasting Corporation and the National Film Board

**Educational Functions of the Canadian Broadcasting Corporation.**—Many hours of educational and semi-educational programs are broadcast annually by the Canadian Broadcasting Corporation's radio and television facilities. Whether these programs are directed to children or adults, entertainment is combined with information whenever possible. Spoken-word programs, presented as readings, talks, discussions, documentary programs, dramatizations or in forms combined with music, cover a very wide range of interests.

Specially planned child and youth programming appeals to all age groups from pre-school to teens as in television's *Through the Eyes of Tomorrow* and *Jeunesse Oblige*. Educational programs include credit courses on *Cours-universitaire* and many school broadcasts produced in co-operation with the various provincial educational authorities, as well as informal education programs. In 1965-66 *University of the Air* studied the Ecological Viewpoint; the *Massey Lectures* covered the subject of Politics of Privation; and *Project '66* discussed the Canadian mood. In 1966-67, an educational series consisting of highlights of the previous season's school telecasts is being presented on *Sunshine Semester*.

Programs of an adult education nature are presented frequently by the English networks and co-operation in program planning is received from various educational organizations. The CBC is an active participant in the Joint Planning Commission, a body established by the Canadian Association for Adult Education for exchange of information and co-ordination of plans for adult education in Canada. As illustrations of special-interest programming, five one-hour instructional courses on farming were produced by the CBC Farms and Fisheries Department in 1965-66 in co-operation with the Departments of Agriculture of the three Prairie Provinces; and the French network produced four special programs on farm management in co-operation with the Quebec Ministry of Agriculture, designed to help the transition of farmers in Quebec from the small family holding to something more along the lines of the industrial or commercial enterprise. Religious programming ranges from devotional broadcasts to studies of religion in the community and the changing world; outstanding in 1965-66 were *Ferment* with Paul Tillich and the Bishop of Woolwich, and *Bilan de Vatican II* which, on its second showing, attracted a million viewers.

A number of public affairs television programs are designed to analyse and offer comments and opinions on the events and trends of the day; this, combined with their fast-moving format and their controversial approach, attracts large audiences who greatly enjoy the programs. Thus in 1965-66 *The Public Eye* discussed Capitalism Today and *Défis Nouveaux* studied the Problem of the Aging in Canada. *The Sixties* examined Canadian Immigration and the Problem of Fresh Water Supplies in North America. *This Hour Has Seven Days* and *Le Sel de la semaine* presented ideas and opinions about current events, using comedy, music and satire as regular techniques. *CBC Newsmagazine* presented weekly interview and documentary programs. *Camera 65* on the French television network reported on national and international events and actualities. In the 1966-67 season, *Twenty Million Questions*, a new public affairs program, will keep Canada's 20,000,000 citizens informed about major political issues and other topical matters of national concern.

Special programs are broadcast on radio covering the three-day Winter Conference of the Canadian Institute on Public Affairs, which examines sociological questions in open meetings and group discussions. The summer evening sessions of the annual week-long Couchiching Conference have been broadcast for a number of years. This Conference, organized jointly with the Canadian Institute on Public Affairs, examines Canadian and international affairs in open meetings and group discussions.

The French radio network presents *Fémina* five times a week for women listeners and also broadcasts a number of weekly programs dealing with fine arts, music, literature, theatrical arts, sciences, religion and philosophy under the auspices of *Le Service des émissions éducatives et d'affaires publiques*. On the English network *The Feminine Touch*, an anthology of writings by women, including fiction and non-fiction, verse and prose, was broadcast during the summer of 1966. *Take Thirty*, a week-day television show for women, has a different 'flavour' on each program—entertainment and interviews of performers; travel topics and features on events in Canada and abroad; cooking, child care and household management; discussions on social problems; and interviews with men and women from the sporting world. In the 1966-67 season, *Take Thirty* will have programs filmed on location in London, Paris, New York, Newfoundland and five African countries. Its closest radio counterpart is *Trans-Canada Matinée*.

A few of the programs for the 1966-67 season include such favourites as CBC television's major cultural series *Festival*, which enters its seventh season presenting drama and concert programs, and *Show of the Week*, which is a major showcase for a great variety of performers such as Wayne and Shuster and Juliette. *A World of Music*, a new variety series, features music from many lands sung by performers from all over the world, and an *Anthology* series gives new and established Canadian writers an opportunity to air unpublished short stories, poetry and plays. Centennial programs include *The Reluctant Nation*, which recreates important historical events and personalities that shaped Canada's development during the 1880s and '90s; *Chansons*, a television musical salute to the Centennial of Confederation, which spotlights authentic folk music presented by top Canadian artists and filmed in various colourful locales from St. John's to Victoria; full coverage of EXPO 67; the Pan-American Games in Winnipeg; Camera Canada's documentaries; and Canada 100. William Ronald, one of Canada's leading painters, will again be host as *The Umbrella* begins its second season of exploration of the arts; and *Life and the Land*, a half-hour country and gardening program bringing items of national and local interest to all viewers, will continue on the English network.

**Educational Functions of the National Film Board.**—The National Film Board, an agency of the Federal Government, was established by Act of Parliament in 1939 and reconstituted by the National Film Act in 1950. In the years since its establishment, the Board has grown from a supervisory body over Canadian Government motion picture activities to a national documentary film-producing and -distributing organization whose films about Canada are seen wherever people may freely assemble. The Board produces

and distributes filmstrips and still photographs on Canadian themes in accordance with its primary function outlined in the Act "to initiate and promote the production and distribution of films in the national interest". Films are produced primarily in the English and French languages and, whenever possible, foreign-language versions are prepared to increase the usefulness of Board films in foreign countries.

The 16mm. community film program is based on a nation-wide system of film circuits, film councils and libraries, strongly supported by organizations and individuals engaged in community activities. There are more than 700 national, provincial and community film distribution outlets from which thousands of 16mm. prints are available for public use throughout the country. These prints are acquired for circulation by purchase or by loan from the Board.

A large part of the 16mm. community film audience is reached through classroom showings, indicating progress in the development of audio-visual aid programs in Canadian schools and universities. Another noticeable trend is the more selective use of films by community organizations and groups for particular purposes. This is attributed in part to the availability of Board productions which present series of film studies related to central themes, and to the availability of a broad range of topics which include individual films particularly suited to group objectives and programs.

Films produced by the Board are shown in commercial theatres and on television in Canada and abroad, and newsreel features are also issued regularly for theatrical and television purposes. Distribution of theatrical subjects is arranged by contract with commercial distributing organizations.

Series of original films are shown regularly over English-language and French-language television networks in Canada. Individual films from the Board's extensive general library are available to CBC and privately operated stations. Abroad, because of expanding television facilities in many countries, Board films are seen by audiences which could not otherwise be reached.

In addition to commercial distribution through theatres and television in other countries, 16mm. print circulation is carried on through posts of the Departments of External Affairs and Trade and Commerce, through National Film Board territorial offices at London in England, Paris in France, New York, Chicago and San Francisco in the United States, New Delhi in India, and Buenos Aires in Argentina, as well as through libraries operated by various education agencies. Hundreds of prints of National Film Board films are also sold in other countries each year. Exchange agreements are in effect between the Board and government film-producing organizations in other lands; this means that films of various nations are freely exchanged with those of Canada, aiding international understanding.

The National Film Board maintains a library of more than 150,000 still photographs, which are available at nominal cost to magazines, newspapers and other periodicals wishing to present current information about Canada.

### Section 3.—The Canada Council

The Canada Council was created by the Government of Canada in 1957 to "foster and promote the study and enjoyment of, and the production of works in, the arts, humanities and social sciences". Its task is carried out mainly through a broad program of fellowships and grants of various types. It also shares the responsibility for Canada's cultural relations with other countries and administers, as a separate agency, the Canadian National Commission for UNESCO.

The Council is an independent agency which reports annually to Parliament through a member of the Cabinet, but sets its own policies and makes its own decisions within the terms of the Canada Council Act. It is made up of 21 members appointed by the Governor

in Council. The chairman and vice-chairman serve for terms not exceeding five years and other members for terms of three years. The Council usually meets at least five times a year. The day to day administrative work is carried out by a permanent staff in Ottawa, headed by a director and an associate director who are appointed by the Governor in Council.

**Income.**—The Council's income is derived mainly from two funds, originally of \$50,000,000 each, set up by Parliament when the Council was created. The University Capital Grants Fund, which is now nearing depletion, has enabled the Council to help the universities expand their physical facilities at a crucial period by awarding them up to 50 p.c. of the cost of eligible buildings. The Council's main source of operating income is the Endowment Fund, of which only the interest may be used. It yields some \$3,100,000 annually and out of this amount the Council must normally finance its various programs and its administrative expenses, as well as those of the Canadian National Commission for UNESCO. However, as its resources had become inadequate to meet the growing needs of the arts, humanities and social sciences, the Council received from the Canadian Government, in April 1965, an unconditional grant of \$10,000,000. This grant and the interest earned on it are adding to the income of the Endowment Fund for a period of a few years.

**Assistance to the Arts, Humanities and Social Sciences.**—The Canada Council's assistance is directed to both individuals and organizations. Assistance to individuals is mainly in the form of fellowships, scholarships and research grants. In eight years, the Council has awarded scholarships and fellowships at the master's, doctoral and post-doctoral levels to almost 4,000 scholars in the humanities and social sciences, and to more than 1,200 performing and creative artists. Assistance to organizations, mostly in the arts, takes a large proportion of the revenue from the Endowment Fund.

In the year ended Mar. 31, 1966, the Council devoted approximately \$2,856,000 to the humanities and social sciences, of which \$1,606,000 financed 736 fellowships at the pre-doctoral and post-doctoral levels, and \$1,250,000 was applied to grants in aid of research, university libraries, meetings of scholars and artists, visiting lecturers, publication of scholarly works and other forms of assistance. In the arts, the Council spent \$3,441,000, of which \$425,000 was used to finance 135 scholarships and fellowships and \$3,016,000 was applied to grants, including about \$699,000 for music, \$271,000 for festivals, \$602,000 for the theatre, \$564,000 for dance and opera, \$147,000 for the visual arts, \$234,000 for service and training organizations and \$84,000 for publications.

Apart from its own programs, the Council administers on behalf of the Canadian Government a program of scholarships for students, scholars and artists from French-speaking countries (at present, France, Belgium and Switzerland) wishing to come to Canada. In 1965-66, awards made by the Council under this program totalled \$613,000.

In the fields of engineering, medicine and science, the Council has been offering to qualified Canadian applicants a few research fellowships for work in Canada. These were financed by a special fund provided by a private donor. In the year 1965-66, they amounted to approximately \$38,000.

Under its power to "make awards to persons in Canada for outstanding accomplishments in the arts, humanities or social sciences", the Council awards annually its own Canada Council Medal and the Molson Prize which is financed by funds from the Molson Foundation. It also finances the annual Governor General's Literary Prizes, which are awarded by an autonomous committee.

**UNESCO.**—The Canada Council Act provides for certain functions in relation to the United Nations Educational, Scientific and Cultural Organization. The Council has accordingly established a National Commission for UNESCO and provides its secretariat and budget. As an agent of the Council, the National Commission co-ordinates UNESCO

program activities abroad and administers a small program in furtherance of UNESCO objectives. In the year ended Mar. 31, 1966, the Council spent approximately \$135,000 through the National Commission for these purposes.

### Section 4.—Library Services

**The National Library.**—The National Library of Canada came into existence formally on Jan. 1, 1953 by the proclamation of the National Library Act (RSC 1952, c. 330). On the same date it absorbed the Canadian Bibliographic Centre, which had been engaged in preliminary work and planning since 1950. The Act established a National Library Advisory Council, consisting of the National Librarian who serves as chairman, the Parliamentary Librarian, and twelve appointed members, at least one of whom must be from each of the ten provinces.

By 1966, although the Library was still housed in temporary quarters and only a limited purchasing program could be undertaken, the book collection consisted of over 300,000 volumes, supplemented by microcopies of more than 100,000 additional titles. Under the terms of the Copyright Act and the Library's own Book Deposit Regulations, 8,128 titles were received in the year ended Mar. 31, 1966, 5,968 of which were related in some direct way to Canada.

*Canadiana*, the Library's monthly catalogue of new books and pamphlets relating to Canada, described over 12,000 items in 1965; these included trade and general publications and official publications of the federal and provincial governments. *Canadiana* has been published since 1950 and is cumulated annually; a cumulated index covering the period 1950-62 was published in 1965.\*

The *National Union Catalogue* lists 9,500,000 volumes in 224 government, university, public and special libraries in all provinces. New accessions are reported regularly by these libraries, and the Catalogue thus forms a continuously up-to-date key to the main book resources of the country. More than half a million additions were reported to the Catalogue in 1965-66. During the year ended Mar. 31, 1966, the Reference Division was asked to locate nearly 40,000 titles and it is noteworthy that copies of 80 p.c. of them were found in Canadian libraries. About one third of the requests were for books in the field of science and technology and 80 p.c. were for books published since 1925.

The National Library also publishes bibliographies and the annual cumulation of the *Canadian Index to Periodicals*.

A permanent National Library and Archives Building is under construction on Wellington Street, west of the Parliament Buildings in Ottawa; it will be completed late in 1966.

**The National Science Library.**—The National Research Council Library serves as the library for the Council and as the National Science Library of Canada. Plans for developing a central scientific library were proposed as early as 1924 by the Honorary Advisory Council for Scientific and Industrial Research, established in 1916 and now known as the National Research Council (see pp. 384-391). The Library grew slowly until 1928 when the Council's first research laboratories were set up. Since then it has been developed to parallel the growth and expansion of the laboratories and the national interests and activities of the Council with the result that in 1953, under an agreement with the more recently established National Library, the National Research Council Library formally assumed responsibility for national library services in the fields of science and technology. By 1965, the Library's collection, comprising over 600,000 volumes, was growing at the rate of 150,000 items a year and included journals and other serial publications, books, pamphlets and technical and research reports. The bulk of this material is housed in the main Library with smaller and more specialized collections in six branch Libraries.

\* A list of 400 selected titles of "Books About Canada", prepared by the National Library, appears in Chapter XXVII of this volume.

The resources of the Library are made available by means of an extensive inter-library loan and photocopying service. For purposes of current awareness, the Library issues twice a month its *Recent Additions to the Library*, and a list of *Serial Publications in the Library* is also issued at frequent intervals through the use of data processing equipment. Reference and research services include answering requests for scientific information, literature searches and the compilation of abstracts and bibliographies, and the identification and location of obscure publications.

*The Canadian Index of Scientific Translations*, a card index to the location of completed English translations in Canada and other countries, is maintained by the Library. Translations of scientific articles prepared by the Library's Translations Section are listed and made available in Canada and abroad. A complete English translation of the Russian journal *Problemy Severa (Problems of the North)* is also the responsibility of this Section.

The National Science Library is responsible for the publication of the *Union List of Scientific Serials in Canadian Libraries* and the *Directory of Canadian Scientific and Technical Periodicals*.

**Public Libraries.**—Provincial governments have jurisdiction over public libraries but these are generally administered and regulated by municipal authorities; exceptions are Newfoundland and Prince Edward Island where the provincial governments maintain the public library service throughout the province. Municipal libraries serve the urban population and provincial and regional libraries serve the more widely scattered population. Summary results of the annual public library survey for 1964 are given in Table 2, with comparable totals for 1963. Circulation of books was 4.0 per capita in the later year and current operating payments were \$1.40, compared with 3.7 per capita and \$1.28 in 1963. Of the total full-time staff in 1964, about one quarter were professional librarians.

2.—Summary Statistics for All Public Libraries, 1964 with Totals for 1963

Province or Territory	Population Served	Libraries	Stocks of Books, Periodicals and Pamphlets	Circulation	Current Operating Payments	Full-Time Staff

**University, College and School Libraries.**—Libraries in 77 universities and colleges having enrolments of 100 or more students reported over 10,000,000 volumes or 63.9 volumes per student in 1963-64, compared with 62.9 in 1962-63. Expenditures were \$90.71 per student, an increase of \$20.88 over the previous year. Full-time staff increased by 338 in the same comparison but the proportion of professional librarians was slightly lower in 1963-64 at 29.9 p.c.

<sup>1</sup> Full-time and equivalent.

In 1963-64 only 53.2 p.c. of the reporting 4,892 elementary and secondary schools had centralized libraries—58 p.c. of the secondary schools and 24 p.c. of the elementary schools. Their total bookstock was 7,625,832 or 5.2 books per pupil served, compared with 4.8 in 1962-63. Payments for books and other library materials ranged from \$0.95 per pupil served in New Brunswick to \$5.18 in Saskatchewan, the average for Canada being \$2.63. Professional school librarians numbered 211, an increase of almost 18 p.c. over the previous year but still far short of requirements. In an attempt to fill part of the need, some professional librarians supervised several school libraries rather than that of an individual school.

Libraries in provincial post-secondary institutions were surveyed for the first time in 1963-64; they included libraries in 35 technical institutes across Canada, 66 of the 107

*écoles normales* in Quebec, 10 teachers colleges in Ontario and one each in Nova Scotia, New Brunswick and Manitoba. Of the 35 technical institutes, 27 reported centralized libraries; bookstock per pupil was 14.2 volumes and operating expenditures \$15.40 per pupil. The 68 *écoles normales* in Quebec reported 9,200 students, 65.5 volumes per student, and an operating expenditure of \$27.97.

#### 5.—Libraries in Technical Institutes and Teachers Colleges, 1963-64<sup>1</sup>

<sup>1</sup> Includes statistics of 28 technical institutes and 79 teachers colleges.

**Library Education.**—In 1965, the five Canadian library schools awarded 318 Bachelor of Library Science degrees, an increase of 11.2 p.c. over 1964. Despite this increase, many more professional librarians are needed to raise service to acceptable standards, especially in public and secondary school libraries. Table 6 contains data on 78 p.c. of the graduates, three quarters of whom were women. University libraries absorbed 50 p.c. of these graduates, 31 p.c. secured positions in public libraries and the remainder now serve in government and special libraries or in other countries. Quebec and Ontario employed about 62 p.c. of them. Median beginning salaries ranged from \$5,265 in the Atlantic Provinces to \$5,700 in the Prairie Provinces. School librarians received almost \$1,500 more per annum than public librarians since the former often have teacher training as well as teaching experience.

*The interpretation of the symbols used in the tables throughout the Year Book will be found on p. viii of this volume.*

The characteristic problems of this country, particularly its large area, its small population and its unique industrial structure, have led to a typically Canadian organization of research. Early research was, of course, related to the primary industries. Geological mapping and agricultural research were almost the only areas of activity until the beginning of the present century. In 1898 research in the field of fisheries was assigned to an independent honorary board which has continued to the present as the Fisheries Research Board. In 1916 the Federal Government set up the National Research Council; its early duties were to encourage and stimulate research in the universities through grants and scholarships and it entered active research only with the establishment of its own laboratory system in the late 1920s and early 1930s. Great expansion in scientific research took place during the War when the National Research Council assumed the responsibility for research for the three Armed Services including the development of atomic energy. At the end of the War, the Council returned to its previous activities—the promotion of research in the universities and research for secondary industry. In 1947, the Defence Research Board was set up in the Department of National Defence with responsibility for military research (see Chapter XXVI). In 1952, the Crown corporation, Atomic Energy of Canada Limited, was established to proceed with the development of atomic energy in Canada, and certain other Crown corporations, such as Eldorado Mining and Refining Limited, Polymer Corporation Limited and Canada's largest national utility, the Canadian National Railways, developed important research programs.

Until the 1960s, industrial research was slow to develop in Canada, although certain large industries, particularly the chemical industry and the pulp and paper industry, had long histories of successful research effort. Research councils or foundations were set up by several provinces to improve industrial production efficiency (see pp. 401-404); of these, the Ontario Research Foundation and the British Columbia Research Council, although established under provincial legislation, are self-governing institutions engaged in research and development on contract for manufacturers, departments of government and on their

\* A Selection of Canadian Achievements in Science and Technology, 1800-1964, compiled by Dr. John R. Kohr of the National Research Council, Ottawa, appears in the 1965 Canada Year Book, pp. 398-401. This is available in reprint form from the Dominion Bureau of Statistics, Ottawa.

own account, and derive their current revenue mainly from sponsored research. The Pulp and Paper Research Institute of Canada (see Forestry Chapter) is the one major research association that operates on a co-operative basis; its operating funds are provided by industry and its facilities by the Federal Government and McGill University, all three vitally interested in ensuring that this industry maintains its competitive position in world markets. However, through the years the primary resource base of industry generally was not conducive to the establishment of industrial research laboratories. Also, the prevalence of foreign-owned manufacturing companies exerted considerable influence on the development of industrial research. Canadian subsidiaries of foreign companies had ready access to the research and development results of their parent companies and Canadian companies had little incentive to establish their own laboratories or to develop products specifically for the Canadian market. But now, Canadian industry across the country is greatly extending research facilities and becoming much more aware of the advantages to be gained therefrom. To meet the challenge of competition from other countries in the manufacture of ultra-modern production, it is impressively stepping up its own scientific and technical studies. The Ontario Research Community at Sheridan Park in Metropolitan Toronto is a virtual breakthrough for Canadian industry. So is the research centre at Pointe Claire in Metropolitan Montreal. Such industrial research centres as these will ensure that Canadian industries remain competitive and, perhaps more important, will permit Canadian graduate students to find both challenge and creative opportunity at home. The value of buildings already built or under construction at Sheridan Park is \$27,000,000 and several sites are still available. Elsewhere in the country a number of new industrial research centres have been established, and others are in the planning stage, to conduct basic and applied research in a wide range of scientific disciplines.

Thus, there are three main sectors of research in Canada—government research, university research and research in industry. These three elements are covered in some detail in the following Sections and Subsections.

**Mechanism for the Federal Science Policy.**—In the federal sphere, the ultimate authority for policy on science resides in the Cabinet. To exercise this authority there was established by the National Research Council Act (RSC 1952, c. 239, as amended) a Cabinet committee known as the Committee of the Privy Council on Scientific and Industrial Research. This Committee comprises those Cabinet Ministers having departments with major scientific responsibilities and certain other Ministers who have an indirect concern with scientific affairs. These federal departments and agencies advise the Privy Council Committee on the scientific aspects of their own departmental responsibilities and on the organization and support of research required for their own purposes. For many years, the National Research Council, on the other hand, advised the Committee on general science policy, particularly on research in the universities, in industry and in fields not specifically the responsibility of the departments or agencies. Then, in 1949, the Privy Council Committee broadened the structure of its advisory mechanism by the addition of an advisory body of senior officials to which it might turn for joint advice on the formulation and conduct of government scientific policies.

In 1964, a move was made toward integration and stimulus of research with the creation of a Science Secretariat in the Office of the Prime Minister. Established as a result of the recommendations of the Royal Commission on Government Organization and those of Dr. C. J. Mackenzie, former President of the National Research Council, the Secretariat has the task of assembling, digesting and analysing information related to the Government's scientific and technological activities, including their interrelationships with university, industrial and provincial scientific establishments. In 1966, the Science Council of Canada was established, drawing its professional and administrative support from the Science Secretariat. Exclusively advisory, the Council will call for intensive studies of science and technology in Canada, serving as a focus for information and advice useful to the people of Canada in formulating policies and plans for the future. It will delineate

in broad terms for the first time those fields of science and technology that may be expected to contribute most to the country's economic and social objectives and indicate how their development can best be organized and supported. Membership is drawn from industry, the universities and government.

### Section 1.—The National Research Council of Canada\*

Organized research in Canada on a national basis dates from 1916 when the Government of Canada established the National Research Council. From an initial budget of \$91,600 (only \$50,375 was actually expended) to one of \$74,000,000, the Council has expanded until now it has some 45 Associate Committees studying a wide range of problems, supports the research efforts of 2,500 university scientists and awards 1,900 scholarships, bursaries and postdoctorate fellowships.

The planning and integration of research work, organization of co-operative studies, postgraduate training of research workers, and prosecution of research through grants to university professors formed the basis of the Council's work from 1916 to 1924. As early as 1918, the creation of a central research institute to carry on research in pure science in relation to standards of measurement, quality and composition of material, and research in science applied to the industries of Canada, had been urged and a special committee of Parliament endorsed the proposal. Temporary quarters were secured in 1925 and research on magnesian refractories for steel furnaces was carried out so successfully that an industry established during World War I was re-established on a large scale. As a result of this achievement, the Government in 1929-30 provided funds for new research facilities. The National Research Building on Sussex Drive in Ottawa was opened in 1932 and in 1939 construction was begun on an aerodynamics building located on the Montreal Road, just east of the city. This site now comprises some 400 acres and houses most of the Council's laboratories. A prairie Regional Laboratory built on the campus of the University of Saskatchewan in Saskatoon has been in operation since June 1948 and an Atlantic Regional Laboratory on the campus of Dalhousie University in Halifax since June 1952.

Under the terms of the Research Council Act, the Council has charge of all matters affecting scientific and industrial research in Canada that may be assigned to it by the Committee of the Privy Council on Scientific and Industrial Research. In discharging these responsibilities, the Council may undertake, assist or promote research. Its duties include the utilization of Canada's natural resources; the improvement of industrial processes and methods; the discovery of processes and methods likely to expand existing industries or to develop new ones; the utilization of industrial wastes; investigation and determination of physical standards, methods of measurement, and fundamental properties of matter; the standardization and certification of scientific and technical apparatus used by government and industry; the determination of standards of quality for materials used in public works and government supplies; and investigation and standardization, at the request of industry, of industrial materials or products. As a service to Canadian science, the Council maintains scientific liaison offices in Ottawa, London, Washington and Paris. The liaison officers abroad also serve as scientific attachés in the Canadian diplomatic missions. The National Research Council Library, with holdings of more than 600,000 volumes in science and technology (including 12,000 journals and other serials), acts as the National Science Library of Canada (see also p. 377).

The Council's laboratories are organized in ten divisions and two regional laboratories, each with its own director. Six divisions are engaged in applied and fundamental studies in the natural sciences—biosciences, applied and pure chemistry, applied and pure physics and radiation biology. Four others are devoted chiefly to engineering work—building research, mechanical engineering, radio and electrical engineering, and the National Aeronautical Establishment. The two regional laboratories carry out research related to the

\* Revised by Joan Powers, Public Relations Office, National Research Council of Canada, Ottawa.

resources of the Prairie and Atlantic regions. A Medical Research Council, responsible for the support of medical research but functioning under the general administration of the National Research Council, was established in November 1960 (see p. 288).

The National Research Council consists of the President, two Vice-Presidents (Scientific), one Vice-President (Administration) and 17 other members, each of the latter group being appointed for a term of three years and chosen to represent industry, labour, and research in science and engineering. Many of the members are drawn from Canadian universities. The Council reports to the Committee of the Privy Council on Scientific and Industrial Research through a Minister designated by the Governor in Council for the purposes of the National Research Council Act.

The Council's 1966-67 budget, excluding the provision for the activities of the Medical Research Council, is about \$74,000,000, approximately \$29,000,000 of which is required for foundation work—scholarships and research grants in science and engineering. The remainder is used to operate the laboratories and to provide for the Council's industrial research assistance program. Of the Council's 2,760 employees, 788 are scientists and engineers.

**Links with Industry.**—The application of science to Canadian industry has always been one of the major concerns of the National Research Council. Since 1917, representatives of industry, government and the universities have co-operated, through NRC Associate Committees, in solving pressing industrial and economic problems. There is a constant flow of personnel and information between NRC laboratories and those of industry, and roughly 70 p.c. of the Council's own effort involves applied research intended for industrial use. Contract research on specific projects and a wide variety of testing and standardization work are undertaken. Inventions from NRC laboratories are carried through the patent stage, then made available for manufacture through Canadian Patents and Development Limited (see p. 146).

A most important activity of the Council is its Technical Information Service, which consists of field engineers who visit manufacturing establishments, and a staff of trained researchers in Ottawa who use the technical literature available through the Council's Library. Although all inquiries are handled, the Service is particularly interested in helping small firms with no research or information facilities. Free advice is given on all aspects of materials and processing, equipment, plant design and packaging and on such topics as wage incentives and inventory control.

Direct financial assistance for research performed by Canadian industry was begun by the Council during 1962. Under this arrangement the Council makes grants supporting long-term applied research and development work proposed and carried out by industry. Aid is given on a shared-cost basis, with industry supplying at least half the funds for any one project. Companies of all sizes, representing a wide range of industrial activity, are eligible for assistance and the companies retain all rights arising from the work. In 1965-66, at a cost of \$3,300,000, the Council supported 40 new research projects and 104 continuing projects in 90 Canadian firms. This work gave rise, also, to nearly 700 new research positions.

**Biosciences.**—The program of the Division of Biosciences covers practical problems related to the national economy and fundamental studies that may contribute useful information in such areas as agriculture, medicine and certain industries. Apparatus and techniques for preparing, preserving and storing food make up a large part of the applied work and particular attention has been given recently to food freezing, cold storage in jacketed rooms and refrigerated transport. Study and testing have continued on a process now widely used in industry for the immersion freezing of poultry, quality loss in poultry meat during freezing and refrigerated storage, and an improved cooling system for frozen food trucks. The physical and chemical reactions influencing coagulation in

evaporated milk during sterilization are being investigated. Microorganisms related to food are studied, particularly those that grow in cheese, in high salt concentrations and at low temperatures. A national culture collection of about 3,000 yeasts, bacteria and fungi is maintained.

Considerable effort is devoted to questions of animal and plant physiology. Studies of the mechanisms by which mammals, birds and man adapt to cold have provided important basic information on cell, muscle and metabolic activity, and help to explain practical problems such as the high death rate of newly born caribou. Fundamental plant processes such as translocation are investigated, and a study is being carried out on strains of blue-green algae believed responsible for cattle deaths. Plant fibres such as cellulose—the skeletal material of plants—and the structure and function of plant cell components are also examined.

Other studies involve fermentation mechanisms and enzymology, and the structures of proteins, polysaccharides and lipids. One group, among its other projects, is engaged in long-term statistical studies of protein variability in wheat, a factor that influences overseas wheat sales. The work has been expanded recently to include the effects of weather factors on protein content.

**Radiation Biology.**—The effect of radiation on living things, including people, is the subject of research in the recently organized Division of Radiation Biology. The Division will eventually be housed in a new building being erected in close proximity to the buildings housing the major applied Divisions of the Council. A variety of types of radiation will be used, including ultra-violet light, gamma rays, X-rays, electrons and fast neutrons. The physical, chemical, functional and statistical changes brought about by irradiation of pure chemicals, biochemicals (enzymes and macromolecules), cells, tissues, microorganisms, plants, animals and human or animal populations will be investigated. Studies will also be made of radiations arising within biological materials as well as those originating outside. Where possible, observations will be made of the effects of radiations delivered at widely differing dose rates.

**Applied Chemistry.**—The Division of Applied Chemistry is concerned with supplying new scientific information for the development of Canada's natural resources and chemical industries. Although formerly much of the work involved the solving of immediate specific problems, a larger part of the Division's effort is now being devoted to more basic studies. This avoids conflict with industrial laboratories and consultants and, in addition to providing fundamental information, often produces practical results. For instance, a long-term investigation on the contacting of fluids and solids—an operation vital to many chemical engineering procedures—has resulted in a successful commercial operation for drying grain. The same method can be extended easily to chemical reactions and to removing liquids from other materials.

Another long-term project of considerable industrial potential has concerned the factors responsible for the stability, or the destruction, of suspensions of solids in liquids and a method was devised for easily separating almost any suspended solid from the liquid surrounding it. This work has been expanded to include the separation of dissolved solids. It has been shown that virtually all dissolved salts can be removed from water by filtration through an appropriate medium, and tests with other materials are in progress. Then, too, the study of chemical reactions at very high temperatures—carried on over the past several years—has resulted in the successful preparation of a stable polymer that could not be produced by conventional means.

The eleven sections of the Division are: analytical chemistry, chemical engineering, colloid chemistry, high polymer chemistry, high pressure, kinetics and catalysis, metallic corrosion and oxidation, metallurgical chemistry, physical organic chemistry, hydrocarbon chemistry and textile chemistry. Much of the work falls under the general headings of petroleum or corrosion chemistry, in that several sections work on topics related to one of these fields.

**Pure Chemistry.**—The Division of Pure Chemistry has a small permanent staff which works in collaboration with about 50 young postdoctorate fellows from all over the world. The work consists of long-term fundamental investigations in physical and organic chemistry designed to provide new basic knowledge in chemistry.

The work in organic chemistry includes investigation of the structures of alkaloids, studies of the infrared spectra of steroids, and the synthesis of porphyrins and of compounds labelled with isotopes. Other sections deal with chemical kinetics and photochemistry, the study of the ionization potentials of free radicals by mass spectrometry, Raman and infrared vibrational spectroscopy, organic crystal semi-conductors, and the application of high resolution proton magnetic resonance techniques to the study of hydrogen bonding and other molecular interactions. Still others investigate the thermal properties of simple solids and imperfections in the bulk and the surface of alkali halide crystals, the heats of micellization by microcalorimetry, and the thermodynamics and stress-strain relationships associated with the absorption of fluids by active carbons. There is also a section interested in the chemistry of fats and oils.

**Applied Physics.**—The work in applied physics is divided between research in fields of physics deemed most likely to contribute in a practical way to the Canadian economy and research to improve the accuracy and precision of fundamental physical standards on which all measurements are based. All the fundamental physical standards for Canada are the responsibility of the Applied Physics Division, which has primary standards equal to any in the world in the fields of mass, length, time, electricity, temperature, photometry and radiation. The sections of the Division are: acoustics, diffraction optics, electricity, heat and solid state physics, instrumental optics, interferometry, mechanics, photogrammetric research, radiation optics, and X-rays and nuclear radiations.

Examples of specific projects under way include a study of physiological noise and its relationship with the threshold of hearing, resulting in the development of a new probe microphone which should find wide application in sound measurement; new precision and accuracy is envisaged for audiometers of great importance in connection with hearing loss in industry and elsewhere; researches directed toward improving the resolving power of optical systems, the design of a hydrogen maser offering potential as a frequency standard for defining time, measurements on various metals and ceramics aimed at elucidating the mechanism of heat transfer at high temperatures, the establishment of an international standard neutron source, and investigation and application of the very intense and very monochromatic radiation emitted by gas lasers. Several of the Division's developments are being produced commercially; among these are noise-excluding ear defenders, a revolutionary analytical plotter for making maps from aerial photographs (available in two models—one for military and the other for civilian use), six- and five-figure potentiometers, a precision direct reading thermometer bridge, an instrument for measurement of resistance to a precision of one part per million, and a new instrument for measuring more accurately and quickly electrical voltages of up to 3,000 volts.

**Pure Physics.**—Investigations are under way on cosmic rays and high-energy particle physics, solid state physics, plasma physics, spectroscopy, and X-ray diffraction. The work is on fundamental problems which do not have immediate application but advance the frontiers of knowledge and supply the basis for further progress in the applied fields. Important advances in the study of cosmic rays and energetic particles are being made by means of a specially designed instrument package operating aboard the Canadian earth satellite *Alouette II*. The package is sending back vital new information about the Van Allen radiation belts and about the artificial belts created by atomic explosions.

The solid state group studies the electrical, thermal and mechanical properties of metals and semi-conductors especially at very low temperatures. The plasma physics group, established in 1962, has already made an important contribution by observing the scattering of a ruby-maser beam by a plasma. This study leads to a determination of

electron temperature and electron concentration. In the spectroscopy group, the structures of atoms and molecules are investigated by means of their microwave, visible and ultra-violet spectra, and considerable work has been done on optical masers.

The X-ray diffraction laboratory undertakes fundamental work in molecular and crystal structure and identification problems for government laboratories. Two of the major projects concern narcotics and vanadium minerals. X-ray diffraction methods are extremely valuable for identification purposes as they are non-destructive and require only very small amounts of material.

**Building Research.**—The provision of a comprehensive research service for the construction industry of Canada is the primary concern of this Division. The research program therefore covers all aspects of building design, building materials and components, fire research and studies in soil, snow and ice mechanics. Regional stations engaged in research and information are maintained in Halifax, Saskatoon, Vancouver and Norman Wells. The Division serves as the technical research wing of the Central Mortgage and Housing Corporation.

Examples of Division projects are the behaviour of concrete aggregates and lightweight concretes; the materials and techniques of masonry construction and plastering; atmospheric corrosion of metals; paint and acoustics research; and examination of the performance of walls, windows, chimneys and domestic heating systems. Other studies involve humidity in buildings, air-conditioning design data, snow and wind loads on structures, the properties of various soil types including permafrost and muskeg, and the effects on buildings of ground vibrations caused by earthquakes. A unique fire research laboratory provides facilities for all types of fire resistance, fire prevention and fire fighting tests.

As the Division concentrates on building problems peculiar to Canada, much of the work concerns the performance of buildings and building materials in cold weather. In this connection, double-glazed windows and lightweight metal and glass curtain walls, used increasingly in modern buildings, have been examined. Special studies have been made to improve winter building techniques and there is a section devoted to problems of building in the Far North.

The efforts of the Division have included educational work in a number of directions in order to alert the design professions and manufacturers to design-features that should be avoided. Similar liaison exists with federal and provincial public works departments and some important field studies have been made of some new provincial buildings.

Many results of the Division's research are expressed in the National Building Code, an advisory document of building standards now used by municipalities accounting for about three quarters of the total urban population of Canada. The Division also provides the secretariat and considerable technical assistance to the Associate Committee that produces the Code on behalf of the Council.

**Mechanical Engineering.**—This Division works mainly in the fields of mechanics, hydrodynamics (hydraulic engineering and naval architecture) and thermodynamics. Extensive testing and specification work is undertaken for a variety of industries and for government departments. Much of the work consists of continuing projects related to land, sea and air transportation.

The mechanics activities include mathematical analysis and computation, the development of instruments and servomechanisms, and research on mechanical devices such as gears. One group, working in the field of bio-medical engineering in collaboration with surgeons, has devised a mechanical aid for the treatment of patients with curvature of the spine; a blood cooler used experimentally with animals promises to extend for an hour or more the length of time a surgeon can conduct a brain operation without blood flow through the brain.

In hydraulics, a number of investigations and models have been made for improving Canadian harbours. The successful development of the Jarlan perforated breakwater and

its highly successful use at Baie Comeau have set in motion investigations as to its applicability to other harbours in Canada and this interest is being augmented by inquiries concerning the breakwater from all over the world. Also, a promising scheme has been developed for reducing silt accumulation in harbours by wave energy. The ship laboratory has continued its studies on propeller, rudder and hull design and performance.

Railway work is devoted mainly to locomotives and the riding qualities and mechanical behaviour of freight cars. Improved braking systems and cheaper fuels have been investigated and a study of the dynamics of long trains and of means of reducing damage has been initiated by Canadian railways in co-operation with NRC. A long-term study is being made of the possible use of gas turbines in locomotives.

The application of gas turbines to aircraft taking off and landing vertically is being explored, together with the thermodynamic, aerodynamic and control problems that this type of aircraft involves. Considerable research is being done on the behaviour of lubricants at high pressures and that of gases at extremely high temperatures.

**National Aeronautical Establishment.**—The National Aeronautical Establishment conducts aeronautical research to meet the needs of military and civil aviation, working in co-operation with the Canadian aircraft industry; it also carries out its own research program. Its studies therefore centre around problems of aerodynamics, aircraft structures and materials, and flight mechanics. It has the only development wind tunnel facilities in Canada and is thus equipped to handle most of the industrial or military aircraft developments of the foreseeable future. Aerodynamics research from low speeds up to about  $4\frac{1}{2}$  times the speed of sound is carried out in the wind tunnels; considerable attention is being given at present to low-speed problems of vertical and short take-off aircraft. Other studies include work on the aerodynamic characteristics of high-thrust propellers, on wings with submerged fans and on wings immersed in powerful slip-streams. The research on structures and materials involves investigation of aircraft accidents, the theory of structures, fatigue and fracture, flight loads statistics and aircraft hydraulics. The flight mechanics program covers research on flight safety and flying stability and control, the development of a crash position indicator for locating crashed aircraft, atmospheric physics, anti-submarine magnetometry, and the avoidance of aircraft collisions.

A growing and highly diversified program of assistance to smaller industries is developing, the work relating mainly to product development, product improvement or testing. Concerning aircraft utilization, efforts have been directed toward those areas of national activity where aerial methods might offer economies in cost or improvements in effectiveness, such as agricultural applications, forest fire fighting, aerial logging, high sensitivity magnetic surveys, precipitation physics, and studies of atmospheric turbulence.

**Radio and Electrical Engineering.**—The work of this Division includes engineering problems of interest to Canadian industry and fundamental research in electrical science. The Division co-operates with the Armed Services and associated industries in designing, producing and evaluating new equipment.

The engineering program includes studies of corona loss and radio interference from extra-high-voltage direct-current transmission lines, rocket telemetry, antenna development, electromedical instrumentation, electronic aids to navigation, and high-frequency standards. The Division maintains the best-equipped antenna laboratory in Canada and provides considerable assistance to Canadian industry in the development and manufacture of new antennas and radomes. Examples of recent developments by the Division are a compact transistorized marine radar for use by pleasure craft and fishing vessels, an underwater crash position indicator for locating submerged aircraft, an area display electrocardiograph showing the time variation of heart voltage between 70 points on the body, and a creative tape recorder much in demand by electronic music studios. A highly mobile counter-mortar radar designed by the Division went into commercial production in 1961.

Fundamental studies are carried out in the fields of radio astronomy, upper atmosphere research, electron physics, and solid state physics. At the Division's radio observatory in Algonquin Park, Ont., a radiotelescope having a parabolic reflector 150 feet in diameter went into operation in mid-1966.

**Space Research Facilities.**—In 1966, the National Research Council took over from the U.S. Air Force's Office of Aerospace Research the Churchill Research Range at Fort Churchill, Man., and placed it under its newly formed Space Research Facilities Branch. The Range, which is being operated for the joint benefit of Canadian and American scientists under joint Canadian-American funding, is capable of launching many kinds of sounding rockets and balloons carrying scientific experiments to investigate the earth's upper atmosphere. Associated ground-based instruments are specially designed to study the aurora borealis by photographic and spectrophotometric methods.

The Space Research Facilities Branch has also taken over the work previously carried out in the Radio and Electrical Engineering Division to convert scientific experiments into hardware suitable for rocket payloads. This engineering work on behalf of scientists in the National Research Council and in Canadian universities will be done primarily by industrial contracts and includes selection and procurement of suitable rockets. The Branch also operates a Minitrack satellite-tracking and data-reception station near St. John's in Newfoundland; this activity is carried out on behalf of the National Research Council of Canada and the National Aeronautics and Space Administration of the United States.

**Atlantic Regional Laboratory.**—The Atlantic Regional Laboratory is engaged in practical and fundamental studies related to the resources and industries of the Atlantic Provinces. The Laboratory offers advice and assistance to local industries and government departments and, in addition, houses the Atlantic Regional Station of NRC's Division of Building Research. The research program includes investigations of the biochemistry and physiology of fungi, bacteria, marine algae, lichens, mosses and higher plants; of the chemistry of naturally occurring organic compounds; of the physical chemistry of inorganic reactions at high temperatures. Studies are under way on the application of scientific agriculture to the cultivation of seaweed and surveys promise to reveal new sources of supply to meet the future demands of this expanding industry. Extracts obtained from species such as Irish Moss, kelp and rockweed find more than 40 different uses in the food, pharmaceutical and textile industries and in agriculture.

A development of considerable significance was the establishment of a close working relationship with Dalhousie University at Halifax. Under the new arrangement, students acceptable to the University's Faculty of Graduate Studies may carry out research in the Atlantic Regional Laboratory, directed by Laboratory staff members holding unpaid appointments in the Faculty. The immediate aim of the scheme is to expand the facilities for graduate studies in the Atlantic region; the long-term objective is to help create a strong scientific background conducive to large-scale development by industry.

**Prairie Regional Laboratory.**—One of the aims of the Prairie Regional Laboratory is to develop wider uses for crops grown on the prairies by determining potential uses of crops now in production and by encouraging the production of new crops to meet specific needs. The Laboratory program is carried out by five sections: the physiology and biochemistry of fungi section, physiology and biochemistry of bacteria, plant biochemistry, chemistry of natural products, and the engineering and process development section. Research is therefore carried out on the properties and reactions of plant components, and on the biological, chemical and engineering processes for turning them into other compounds. The development of oil-seed crops as alternatives to seed crops has received considerable attention.

For some time, the Laboratory has studied major plant constituents such as carbohydrates, protein, starch, lignin and fibres. An example of this work is the definition of the chemical structure of several polysaccharides found in cereal grains and important in baking, milling and fermentation technology. Attention is also being given to minor plant constituents, such as phenols, flavonoids and terpenes, which are known to have fungicidal and germicidal properties. A laboratory has been set up for the systematic study of extractives from local plants and shrubs.

Developments from the Laboratory attracting commercial interest are: the production of feed supplements by direct use of microorganisms, and specific essential amino acids such as lysine; poly-hydroxy alcohols such as glycerol and arabitol; hydroxy fatty acids; and the possibilities of producing specific glyceride types using the enzyme systems of microorganisms. The Laboratory works in co-operation with the Canada Department of Agriculture to help maintain Canada's position as the world's leading exporter of rapeseed, used to produce cooking oils, dressings and oil for use in margarine and shortening. A group working in the field of mycology is concerned with the production of new chemicals, antibiotics, alkaloids and amino acids.

## Section 2.—Research in the Atomic Energy Field\*

**Recent Developments and Prospects.**—The first major fruits of Canadian atomic energy research now appear close at hand. The Hydro-Electric Power Commission of Ontario is constructing a multi-unit nuclear electric generating station at Pickering near Toronto. Each unit will generate 500 megawatts (1 megawatt = 1,000 kilowatts) and beginning in 1970 it is planned to bring into operation the first four units at yearly intervals. Estimates indicate that the power will be generated for less than four mills (0.4 cents) per kilowatt hour and will be competitive with that from other available types of thermal generating station. The Quebec Hydro-Electric Commission is also entering the nuclear field with a 250-megawatt prototype nuclear generating station of advanced design. Like the earlier CANDU (Canadian Deuterium Uranium) reactors, the design employs natural uranium as the fuel and heavy water as the moderator but the heat will be carried from the fuel by boiling ordinary water instead of by heavy water at a pressure sufficient to prevent boiling. The design is distinguished by the title CANDU-BLW-250 (Canadian Deuterium Uranium-Boiling Light Water-250 megawatts).

The first nuclear power demonstration (NPD) reactor, CANDU-PHW-20 (Pressurized Heavy Water-20 megawatts), at Rolphton, Ont., has shown clearly that capacity factors in excess of 80 p.c. throughout a full year can be achieved with this type of system. Fuel is routinely changed with the reactor at power and losses of heavy water are well within the economic limits. This reactor is now yielding useful information on the long-term behaviour of its components and is providing a training base for those who will staff the larger reactors now being built in Canada and abroad. The next reactor in the series is the 200-megawatt station at Douglas Point, Ont., which will be brought into operation in 1966.

Canadian heavy-water power reactors are also under construction in India and Pakistan. To meet the large demand for heavy water that these reactors necessarily entail, one plant to produce 200 tons a year is nearing completion at Glace Bay, N.S., and a site is being chosen for another that will produce 500 tons a year.

Although nuclear power is expected to restore the world market for uranium, the major build-up is expected in the 1970s. The high energy yield from the fission of uranium is the key to economic nuclear power. The yield is so high that the cost of the raw uranium is a very minor component of the cost of electric power. It is about 5 p.c. of the total and may be contrasted with 50 p.c. or more paid for coal in some large conventional generating stations. The largest component in the over-all economy of nuclear power systems is reactor plant construction and a minor (10 p.c. to 15 p.c.) component is fuel fabrication.

\* Prepared (June 1966) by Dr. W. B. Lewis, Senior Vice-President (Science), Atomic Energy of Canada Limited, Chalk River, Ont.

In the past, the major atomic energy activity in Canada was uranium mining and refining for export in support of military uses. Circumstances have changed so greatly that the Government has announced a policy of no further exports for nuclear weapons but is encouraging export for peaceful purposes such as nuclear power subject to negotiated safeguards. It is also significant that since lower unit power costs result from larger stations, there is a new incentive for large utilities to export power from their systems and to interconnect centres of load by high voltage transmission even over long distances. Also, all users of electricity benefit from the new trend to lower rates through greater demand. The Canadian designs of nuclear power reactor appear capable of adapting to the largest capacities desired and of taking advantage of changes in the market value of natural uranium and of reprocessed fuel to reach even lower power costs as the scale of operations increases.

The first commercial food irradiator using cobalt-60 radiation has been put into service near Montreal, Que.

A major advance in instrumentation, precision gamma-ray spectrometry based on specially prepared germanium crystals pioneered at Chalk River, is revolutionizing many techniques, particularly isotope and element analyses by radioactivation by neutrons.

**Organizational Arrangements.**—Three Federal Government organizations have the basic responsibilities for atomic energy in Canada: (1) the Atomic Energy Control Board, responsible for all regulatory matters concerning work in the nuclear field; (2) Eldorado Mining and Refining Limited, with a double function as a producer of uranium and as the Government's agent for the purchase of uranium from private mining companies; and (3) Atomic Energy of Canada Limited, concerned with nuclear research and development, the design and construction of reactors for nuclear power, and the production of radioactive isotopes and associated equipment, such as cobalt-60 Beam Therapy units for the treatment of cancer, and large installations for the sterilization of medical supplies and other uses.

The Atomic Energy Control Board does not itself conduct research but it gives substantial grants to universities to further independent studies and to provide the equipment without which the universities would find it difficult to train the nuclear research workers of tomorrow. The National Research Council also has made grants in the atomic energy field; in 1965-66 they totalled \$1,600,000.

Eldorado operates research and development laboratories in Ottawa and uses them to support its uranium mining and processing at Beaverlodge in northern Saskatchewan and its refining plant at Port Hope, Ont. Eldorado co-operates with the Department of Energy, Mines and Resources, which carries out background research on the production and use of uranium.

Atomic Energy of Canada Limited (AECL) has an eleven-man Board of Directors, including individuals from power companies, private industry and the universities. The company's major plant, the Chalk River Nuclear Laboratories, is near Chalk River, Ont., and a second plant, the Whiteshell Nuclear Research Establishment, is near Pinawa in Manitoba. The company's Head Office and AECL Commercial Products are in Ottawa. AECL Power Projects and Prototype Design Engineering Division in Toronto direct the engineering of power reactors and nuclear generating stations and operate as consulting nuclear engineers. The design and construction of NPD, the demonstration plant, was carried out by collaboration between AECL, the Canadian General Electric Company Limited and Ontario Hydro. AECL Power Projects, with the assistance of Ontario Hydro, designed and constructed the Douglas Point station, which plant, by agreement, will be purchased by Ontario Hydro when it is in satisfactory operation. A similar arrangement between AECL and Hydro Quebec is expected to be used for the construction of the CANDU-BLW-250 station. The large units of the Pickering station are being built by Ontario Hydro using AECL Power Projects as consulting nuclear engineers. An Advisory Committee on Atomic Power Development keeps all other utilities fully informed of the

progress being made. This Committee, which was set up by the Federal Government in 1954, meets periodically to assess the economic prospects of nuclear power throughout the country.

Because of the great pace of technological development in nuclear power throughout the world, AECL devotes a major effort to collaboration with many organizations. These include industrial firms and the scientific and engineering departments of universities in Canada and, through foreign government agencies and several international organizations, many technical groups in other countries. For example, the Canadian General Electric Company has designed and constructed WR-1, an organic-cooled experimental reactor, for the Whiteshell Nuclear Research Establishment on a fixed price negotiated contract. The Canadian General Electric and Canadian Westinghouse companies are AECL's chief contractors for fuel element fabrication, and other work related to Canada's nuclear power program is carried out in collaboration with Shawinigan Engineering, Hawker Siddeley Canada Limited, Dilworth, Secord, Meagher and Associates, Montreal Engineering Company Limited and others. In general, AECL's policy is to stimulate the interest of private industry in the development of nuclear power so that these firms can take over construction of power plants when the time arrives, leaving AECL free for fundamental studies and developing new reactor concepts. For some years AECL expects to continue a consulting engineering role in the design of nuclear generating stations. AECL also lends general support to the nuclear and related studies of Canadian universities and lets contracts to the universities on specific problems.

To support their activities in this field, both industry and universities need ready access to information. This was one reason why industry set up the Canadian Nuclear Association, a body that has held a highly successful series of annual conferences at which both progress and the prospects for the future are reviewed. A commercially published magazine, *Canadian Nuclear Technology*, maintains the flow of general information and opinion. Detailed technical information is available principally from the library of the Chalk River Nuclear Laboratories, which lends about 500 items a month from its comprehensive collection of the world's nuclear literature. Information is also distributed from extensive depository collections at the libraries of the University of British Columbia, McMaster University and the National Research Council and from seven smaller collections located across Canada.

In the international field, close ties are kept with the United States Atomic Energy Commission (USAEC) and the United Kingdom Atomic Energy Authority, both of which have representatives permanently at Chalk River. There is an agreement with the United States for co-operative work on heavy-water-moderated reactors; it provides for the free exchange of all technical data in this field and a commitment by the United States to undertake research and development related to reactors of Canadian design. Collaboration has also been established with the International Atomic Energy Agency, the Organization for Economic Co-operation and Development, and Euratom, as well as with Australia, West Germany, India, Italy, Japan, Pakistan, Spain, Sweden, Switzerland, U.S.S.R. and, less formally, with Denmark, France and Norway. In India, a major experimental reactor—the Canada-India Reactor—similar to NRX at Chalk River was constructed and was formally inaugurated in January 1961.

A 200-megawatt plant similar to that at Douglas Point is being constructed in India on a co-operative basis, known as the Rajasthan Atomic Power Project (RAPP). India has announced plans to install a second similar unit on the same site and two more units on another site near Madras. Pakistan has entered into an agreement to purchase from the Canadian General Electric Company a 137-megawatt station for the Karachi area.

**Research and Research Facilities.**—At the Chalk River Nuclear Laboratories, basic and applied research is carried on by about 200 professional scientists and engineers supported by 300 technicians devoted to research in nuclear physics, nuclear chemistry, radiobiology, reactor physics, radiation chemistry, environmental radioactivity, physics

of solids and liquids, and other subjects, using as their primary facilities the two major reactors, NRX and NRU, the auxiliary reactors, ZEEP, PTR and ZED-2, the tandem Van de Graaff accelerator and analytical facilities such as a precision beta-ray spectrometer, mass spectrometers, electron microscopes, multi-channel pulse analysers, automatic recorders, and analogue and digital electronic computers.

Basic research is carried on in many fields, especially that of the structure of atomic nuclei and of the interactions of neutrons, not only with individual nuclei but also with liquids and crystalline solids, particularly those involving energy transfer. For nuclear structure studies, the tandem Van de Graaff has made pioneer work possible by providing multiply charged ions of precisely known energy and direction. It has proved possible to produce nuclei in specific energy states by different routes and to identify and analyse the states, thereby deducing the spin and other characteristics and discovering, for example, three correlated series of rotational states in the nucleus neon-20. Not only is this important to a basic understanding of nuclear structure but it also finds application in unravelling the complex of nuclear reactions responsible for the genesis of nuclei in the interior of stars.

Studies of neutron interactions with matter are made possible by the intense beams of neutrons available from the NRU reactor. By monitoring the neutrons in cosmic radiation, it has been possible to find correlations with the occurrence of solar flares and contribute to the recent advances of knowledge of phenomena in interplanetary space. Isotope techniques have brought about revisions in the basic theory of chemical reactions induced by radiation. This basic research may find a useful application in the technology of using an organic liquid as coolant in nuclear power reactors.

The research facilities of the NRX and NRU reactors have continued to attract individual scientists as well as teams from universities and from other countries. The international study on the scattering and slowing of neutrons by moderators and other materials of interest at high and low temperatures was recently drawn successfully to a close. More facilities for studying radiation damage under closely controlled conditions are coming into use. These include devices for measuring creep of metals under stress and fast neutron bombardment at controlled temperatures.

The first major installation at the Whiteshell Nuclear Research Establishment (WNRE) is the organic liquid-cooled, heavy-water-moderated experimental reactor WR-1, commissioned in 1965. Under a special agreement the facilities of this reactor are now shared with the USAEC and their contractors. The facilities are specially suited for development work toward large reactors of a similar type that have been selected by the USAEC as promising for their water desalination program. The facilities of WR-1 are quite extensive and can be applied to development work also with other coolants such as boiling water and superheated steam. Laboratory facilities at WNRE are specially suited to studies of the effects of radiation and a wide program from molecular biology to radiation chemistry and reactor engineering is envisaged. A new tandem Van de Graaff rated at 10,000,000 volts on the terminal has replaced the former machine at Chalk River that attained 7,000,000 volts. The growing use of lithium-drifted germanium detectors for precise measurements of gamma-ray energies has led also to more extensive electronic digital data-processing.

**Nuclear Power Development.**—Much of the success of the CANDU series of reactors is attributable to the engineered design of the fuel tested in many experimental irradiations under conditions that are more exacting than normal service. The fuel is uranium dioxide specially prepared from natural uranium entirely in Canada. Strings of pellets of sintered oxide are charged into thin-walled zirconium alloy tubes. The tubes deform slightly in service in a determined manner that has proved satisfactory. The migration of the fission product atoms, especially the gases, has been extensively studied and satisfactory operating conditions established for the full energy yield of 9,000 megawatt-days per ton of uranium and more. This energy yield is so great that there is no need to make provision for processing the spent fuel and the prospective fuelling cost is less than

one mill (0.1 cent) per kilowatt hour of electricity. This cost may be compared with about three mills from coal at \$8 per ton. The low fuelling cost is most important because Canada has access to such an abundance of coal, oil and natural gas that the competitive cost level for thermal power is lower than in many other countries.

The low fuelling cost derives as much from the details of the design proposed as from the general type of reactor chosen. Some of the important features seem worthy of mention. At Douglas Point the first full-scale plant will generate 220 megawatts with a steam-cycle efficiency of 33.3 p.c., so that the reactor has to supply 660 thermal megawatts to the steam-raising plant. The reactor is essentially a tank of heavy water, 20 feet in diameter and 16.5 feet long, lying horizontally. It is penetrated by 306 fuel channels parallel to the axis on a nine-inch-square lattice. Each channel is a zirconium-alloy pressure tube of 3.25 in. inside diameter and about 0.16 in. thick. The fuel consists of bundles of 19 rods, 0.6 in. in diameter and 19.5 in. long, made of dense uranium dioxide in thin zirconium-alloy tubes. Heat is taken from the fuel directly by heavy water that passes at 560°F to the steam boiler, where normal water is raised to saturated steam at 483°F and 38 atmospheres. These details show that the design represents a considerable advance over that originally conceived in 1956, and the improvement bears promise that continued progress will lead to costs well below the economic target. As examples of the advance, it may be noted that, for the same electric power output, the total heat production of the reactor has been brought down from 790 to 700 megawatts, the efficiency of the steam cycle itself has risen from 27.9 p.c. to 33.3 p.c., and the length of fuel rod has been reduced from 86 to 30 kilometers. The prospective fuelling cost has dropped from 1.85 mill/kwh. to 1.0 mill/kwh. On the other hand, no over-all reduction has been achieved in the capital cost estimates which remain in the range of \$300 to \$400 per electrical kilowatt for the whole plant. However, a reduction is expected now that manufacturing experience has been gained which can be used in future construction. Even greater reductions in unit power cost will result at Pickering from the increase in the capacity of the reactor to 500 megawatts of electricity and the incorporation of several such units in a large generating station.

An evaluation was presented at the third United Nations Conference on the Peaceful Uses of Atomic Energy at Geneva in September 1964 of cost estimates of several preliminary designs of large power reactors using heavy water as moderator. These designs represented types for which development work was well advanced. The differences lie in the choice of heat transfer fluid or 'coolant' and the steam cycle. Basically there are three coolants—heavy water, ordinary or light water, and an organic liquid. The heavy water could be under pressure to prevent boiling or to allow some boiling. Light water would have to boil or be in the form of 'fog' or 'wet steam'. The organic liquid must not boil. All types have excellent economic promise and it was decided to develop the boiling light water type chiefly for two reasons. By taking the steam direct to the turbine a boiler or heat-exchanger is eliminated and the efficiency is raised. The second advantage is a relaxation of the strictness of control of leaks needed with hot heavy water, both because of its cost and because of the toxicity of the tritium it contains. Some development of the organic liquid system continues under a new agreement with the United States in support of its program to develop such a system for water desalination as well as for power.

Most of this development work centres on establishing the properties of materials for the arduous environment of high temperatures, and radiation effects affecting the solids and the fluids. In ordinary engineering, the three parameters of stress, temperature and time lead to complex analyses, especially when corrosion and atomic diffusion are active. In reactors, irradiation is a fourth and major parameter. Thus, materials development still calls for a major scientific and engineering program of studies.

CANADIAN NUCLEAR REACTORS IN OPERATION, UNDER CONSTRUCTION OR UNDER DETAILED DESIGN

Name	Location	Date of Start-up	Power	Fuel	Moderator	Coolant	Use
Zero Energy Experimental Pile (ZEEP).....	Chalk River, Ont.	1945	100 w.	Natural uranium metal or oxide	Heavy water	—	Lattice experiments
National Research Experimental (NRX) <sup>1</sup> .....	Chalk River, Ont.	1947	42, 000 kw.	Natural uranium oxide and enriched uranium alloy	Heavy water	Ordinary water	Research, engineering tests and isotope production
National Research Universal (NRU).....	Chalk River, Ont.	1957	90, 000 kw. to 120, 000 kw.	Enriched uranium alloy	Heavy water	Heavy water	Research, engineering tests and isotope production
Pool Test Reactor (PTR).....	Chalk River, Ont.	1957	100 w.	Enriched uranium alloy	Ordinary water	Ordinary water	Reactivity and absorption measurements
Toronto University Sub-critical Reactor.....	Toronto, Ont.	1958	—	Natural uranium metal	Heavy water	—	Research and teaching
McMaster Nuclear Reactor (MNR).....	Hamilton, Ont.	1959	2, 000 kw.	Enriched uranium metal	Ordinary water	Ordinary water	Research
ZED-2.....	Chalk River, Ont.	1960	100 w.	Natural uranium metal oxide or carbide	Heavy water	—	Lattice experiments
Nuclear Power Demonstration (NPD).....	Rolphinton, Ont.	1962	20, 000 kw. (electricity)	Natural uranium oxide	Heavy water	Heavy water	Power demonstration
Whiteshell Reactor No. 1 (WR-1).....	Pinawa, Man.	1965	40, 000 kw. at first	Enriched uranium oxide	Heavy water	Organic liquid	Research and engineering tests
CANDU-PHW-200 <sup>2, 3</sup> .....	Douglas Point, Ont.	1966	200, 000 kw. (electricity)	Natural uranium oxide	Heavy water	Heavy water	Power
Karachi Nuclear Power Plant (KANUPP)...	Karachi, Pakistan	1970	137, 000 kw. (electricity)	Natural uranium oxide	Heavy water	Heavy water	Power
CANDU-PHW-500 (several reactors) <sup>2</sup> .....	Pickering, Ont.	1970	500, 000 kw. (electricity) each	Natural uranium oxide	Heavy water	Heavy water	Power
CANDU-BLW-250.....	Pointe aux Roches, Que.	1971 proposed	250, 000 kw. (electricity)	Natural uranium oxide	Heavy water	Ordinary water boiling	Power

<sup>1</sup> NRX is essentially duplicated in the Canada-India Reactor, near Bombay, India, which started up in 1960.

<sup>2</sup> The CANDU-PHW-200 design is also employed in the Rajasthan Atomic Power Plant in India, scheduled to start up in 1969.

<sup>3</sup> CANDU-PHW stands for "Canadian Deuterium Uranium-Pressurized Heavy Water".

### Section 3.—Space Research in Canada\*

The interests of Canadian scientists engaged in space research continue to be mainly in the field of aeronomy with particular, though not exclusive, emphasis on the high-latitude atmospheric and magnetospheric phenomena which are now generally believed to be related to the various disturbances on the sun. Canada, with its large land mass extending on both sides of the auroral zone, is ideally located for studies of medium- and high-latitude atmospheric phenomena and Canadian scientists have long been active in this exciting field. While many of the older programs of ground-based observations are still of great importance and are being carried out, the new measurements from satellites and rockets are making a significant contribution to knowledge of solar-terrestrial relations and in the next few years the importance of these studies using the new space techniques will increase.

The satellite program of the Defence Research Board, carried on in collaboration with the United States National Aeronautics and Space Administration (NASA), continues to form a major part of the Canadian space activities. The Canadian satellite 1962 Beta Alpha (*Alouette*), which was launched on Sept. 29, 1962, is still in orbit. Its instruments are functioning satisfactorily and there is every indication that it will continue to operate and send back scientific data for many months to come. The satellite carries a number of experiments but its main objective is the sounding of the ionosphere from above. The ionosphere is the diffuse layer of highly conducting gas lying between heights of about 60 to 300 miles. It reflects radio waves over a wide band of frequencies and is of great practical importance for communications. The underside of the ionosphere has been studied for many years by the technique of sending a short pulse of radio waves up from the ground and examining this pulse after it had been reflected back from the ionized regions. The satellite *Alouette*, however, was the first spacecraft to provide scientists with a continuous sounding of the ionosphere from above.

Other instruments carried by the satellite enable studies to be made of radio waves from outer space and very low frequency electromagnetic waves whose propagation is influenced by the earth's magnetic field. There are also a number of detectors to study cosmic rays, energetic particles in the Van Allen radiation belts and the artificial radiation introduced by high-altitude nuclear explosions. Data are transmitted from the satellite to the ground stations in several countries around the world and the magnetic tape records are sent to Ottawa for analysis. Scientific results to date have been most gratifying and the satellite measurements have added greatly to knowledge of the earth's upper atmosphere.

The over-all design and construction of the spacecraft were carried out by the Defence Research Telecommunications Establishment. Some components were made by Canadian industry and the cosmic ray instruments were the responsibility of the National Research Council. The cost of the launching vehicle, the actual launching and much of the data recovery were undertaken by the NASA as part of its international co-operative program. This joint Canadian-United States program is continuing. On Nov. 29, 1965 the second Canadian satellite *Alouette II* was successfully launched by NASA from the Western Test Range in California. This spacecraft carries instruments similar to but more sophisticated than *Alouette I*. Its elliptical near-polar orbit has an apogee of 3,000 km., allowing measurements to be made over a much greater height range than previously. *Alouette II* is the first of four satellites to be built in Canada for the International Satellites for Ionospheric Studies (ISIS) series. These vehicles will be launched at about two-year intervals during the next five or six years.

The rocket-launching facility at Fort Churchill, Man., located almost under the belt of maximum auroral activity, has been very active; 17 Canadian rockets carrying scientific instruments have been launched since January 1964 as well as many United States rockets. The range has four launchers capable of handling the following rockets: *Arcas*, *Nike*, *Cajun*, *Nike Apache*, *Astrobe*, *Aerobee*, *Argo D-4* (*Javelin*) and the Canadian *Black Brant*

\* Prepared (June 1966) by C. Collins, Division of Pure Physics, National Research Council of Canada, Ottawa.

series. On Jan. 1, 1966, the National Research Council assumed responsibility for the management of the Churchill Research Range. This arrangement was formalized by a Canadian-United States governmental agreement of June 14, 1965, which provided for joint funding and use of the range and designated the National Research Council and the National Aeronautics and Space Administration as the responsible Canadian and American agencies. Operations at the range are carried out by a civilian contractor.

Rockets have a special role in the space programs because there is an important region of the upper atmosphere that is too low for satellite orbits and too high to be reached by balloons or aircraft. This is the region between heights of about 25 and 200 miles. Here are found the absorbing layers in the lower ionosphere which cause radio blackouts and here are detected the complex atmospheric processes which produce the visible aurora. Because the axis of the earth's magnetic field is tilted, the auroral zone sweeps down across Canada and Churchill lies almost in the middle of this zone. This region of the atmosphere is therefore of great interest and importance to Canadian scientists. For many years investigations were limited to ground-based radio and optical measurements but now rockets are being used to carry instruments right into the aurora. These measurements, *in situ*, of electron density, temperature and charged particles will ultimately lead to a proper understanding of the aurora and high-latitude disturbances.

Many of the rockets fired at Churchill are of Canadian design and development. These are the *Black Brant* rockets which were pioneered by the Defence Research Board and are now produced commercially in Winnipeg. The first in the series, the *Black Brant I*, was an experimental vehicle and is now obsolete. *Black Brant II* is a 17-inch diameter vehicle capable of carrying 150 lb. of payload to over 100 miles. *Black Brant III* is a smaller rocket, 10 inches in diameter which will lift 40 lb. to about 100 miles. *Black Brant IV* is a combination of *II* and *III* and will go to a height of about 600 miles. *Black Brant V* is an optimum design of the *II*. Most of the flights have been made with the *IIs* but the *IIIs* and *IVs* have been successfully flown and will be used to carry scientific instruments in the immediate future.

Along with the increased activity in Canadian space programs there has been a general broadening of interests. The Meteorological Branch of the Department of Transport (DOT) Meteorological Satellite Data Laboratory is conducting a program to produce applications of satellite observations to the problems of meteorology and ice reconnaissance. In the field of communications satellites, the DOT has a joint program with NASA in which Canada participates in the testing of such spacecraft as *Telstar*, *Relay* and *Syncom* and two experimental ground stations for the development and use of communication satellite systems are nearing completion at Halifax and Toronto.

Canadian universities have continued to be very active in the field of space research. Nine university groups have programs involving the instrumenting of rockets, balloons or satellites for upper atmospheric studies. The McGill University program of gun-launched vehicles in the Barbados known as HARP (High Altitude Research Program) has been carried on with considerable success. About 100 launchings were made in 1965. Improvements have been made to both the gun and the vehicles and successful measurements have been made of wind shears and atmospheric constituents in the 100-km. region. A gun and test range has been set up near Highwater, Que. This program is carried on in collaboration with the U.S. Army.

Much of the foregoing work is shared with Canadian industry. Civilian contractors are producing instruments and space vehicles for both Canadian and foreign experimenters. In some programs, such as the *Alouette* satellite and the development of *Black Brant* rockets, industry is playing a major role. Other work of great importance for the space programs, such as fundamental research on materials and in plasma physics, is also being carried on in industrial laboratories.

## Section 4.—Research in Geophysics and Astronomy

In this edition of the Year Book, research in the field of geophysics is covered in Chapter I under the heading of Geology and Economic Minerals of Canada, pp. 30-32. The following item on this subject gives brief additional data on current (1966) projects and facilities. A special article on Astronomy in Canada, appearing in the 1965 Year Book at pp. 47-55, indicates in some detail the advances made in astronomical research and educational facilities; the write-up on p. 400 mentions the highlights only.

**Geophysics.\***—Geophysics—the study of the earth, including the oceans and atmosphere by the methods of physics—embraces a number of fields, each a major science in itself, such as geodesy, seismology, terrestrial magnetism, meteorology, oceanography and hydrology. Work in geophysics in Canada is carried on by a number of Federal Government departments, some provincial governments, nearly all universities and by companies engaged in geophysical prospecting for oil or minerals.

Currently, in the field of seismology, the 25 seismograph stations operated by the Dominion Observatory, with the co-operation of universities in several cases, provide good coverage of the country for the recording of earthquakes; an additional station is being constructed at Suffield, Alta., by the Defence Research Board. The regular stations are supplemented by a special array of detectors at Yellowknife, N.W.T., which is operated by the Dominion Observatory as part of a world net of highly sensitive detection stations for nuclear explosions.

Measurements of both the gravitational and magnetic fields of the earth were extended during 1965-66 over land areas by the Dominion Observatory and the Geological Survey, and over the oceans by the Bedford Institute of Oceanography. These measurements provide information that is extremely useful in the study of concealed geological structures. Recent projects have included an intensive survey of Hudson Bay, which may be the site of a considerable accumulation of sedimentary rocks and therefore of interest in petroleum exploration, and the measurement of the magnetic field over the north Atlantic Ocean by airborne magnetometer. Because the north magnetic pole is located in Canada, studies of magnetic disturbances and their relation to conditions in the upper atmosphere are of importance in Canadian geophysical research. The National Research Council, on Jan. 1, 1966, assumed control of the rocket range at Churchill, Man., which was built by United States agencies (see p. 390). This facility is now available for both government and university research. McGill University has extended its program of launching experimental rockets from guns. A most interesting development has been the discovery that important information can be obtained by simultaneous measurements at "conjugate points", similarly located with respect to the north and south magnetic poles. For the conduct of this work, the National Research Council has constructed a laboratory at Great Whale River, Que., which is conjugate to Byrd Station, Antarctica.

The Canadian program for the International Hydrological Decade, a ten-year study of the world's freshwater resources, has been developed in detail. Experimental basins across the country have been selected for the observation of the effects of changes in surface features on the amount and quality of ground water.

Meteorology includes not only the routine forecasting carried out principally by the Meteorological Branch of the Department of Transport (see p. 75), but also research in special problems by the Branch and by at least 12 university groups. These problems include controlled experiments in weather modification, the mechanics of hail formation, and micrometeorology, which is the detailed investigation of meteorological conditions in regions of small extent.

\* Prepared by Dr. G. D. Garland, Geophysics Laboratory, University of Toronto, Toronto.

During 1965-66, geophysical exploration for oil, chiefly by means of seismic waves from small explosions, was carried out by several companies in Western Canada and also offshore in the Pacific and in the Atlantic Grand Banks area. Prospecting for minerals by magnetic and electromagnetic measurement continued in many areas, and was directly responsible for the discovery of a new lead-bearing orebody in the Pine Point area of the Northwest Territories.

**Astronomy.\***—Modern astronomical research is based on observations secured with complex optical and radio telescopes. The major centres of this research in Canada have developed within the Federal Government and at a few universities. Research in optical astronomy began early in this century at the Dominion Observatory, Ottawa, and this was followed by the construction of larger telescopes at the Dominion Astrophysical Observatory, Victoria, and the David Dunlap Observatory of the University of Toronto. Other Canadian universities teaching astronomy include the University of Western Ontario, Queen's University, the University of Waterloo, the University of Saskatchewan, the University of British Columbia and Victoria University. Some of these universities have their own small observatories. A new observatory, commemorating the visit of Her Majesty Queen Elizabeth II to Canada in October 1964, is under construction on Mount Kobau in southern British Columbia. It will be equipped with a large reflecting telescope 150 inches in diameter, in addition to smaller telescopes, and will be a national observatory available to astronomers throughout the country. Completion of the large telescope is scheduled for about 1973.

Canada first entered the field of radio astronomy, the study of radio emissions from beyond the earth, in 1946 when the National Research Council began its study of solar radio waves. Radio astronomy has expanded rapidly and there are now radio telescopes operated by the University of Toronto, by Queen's University, by the Dominion Observatory near Penticton, B.C., and by the National Research Council at a large observatory in Algonquin Park, Ont., where a steerable radio telescope 150 feet in diameter began observations in 1966. An 84-foot parabolic telescope and two large arrays of antennas are in operation at the Penticton site.

Canadian astronomers are engaged in various specialized fields of research. In the study of the solar system the sun has been studied for many years by both optical and radio techniques with emphasis on solar flares and other phenomena which affect the environment of the earth. Solar eclipses in which the path of totality crosses Canada have been observed whenever possible. Only minor attention has been devoted to study of the planets but major efforts have gone into meteor research. Both photographic and radar equipment are employed in this work and the study of meteor spectra and radar echoes from meteor trails have been particular specialties. There is an increasing interest in the related field of meteorites and Canada has figured prominently in the study and interpretation of old craters caused by the impact of huge meteorites.

Stellar astronomy has been the largest single field of Canadian astronomy. One aspect of this is the accurate determination of the positions and motions of stars in the sky. The Dominion Observatory is continuing an active program of positional astronomy aided by new and highly specialized instruments. The large telescopes at Victoria and Toronto have been used primarily for spectroscopy, one of the major tools of astrophysics. Several programs have been completed in which large groups of stars have been studied individually to determine their true luminosities and motions in the line of sight. The results have then been used for research on the structure of the earth's Milky Way galaxy. From spectroscopic studies of certain types of close double stars, information on such properties as the size, mass, density and temperature of individual stars is secured. Stars whose light varies in intensity have been studied by photography for many clusters of stars and are also studied by photoelectric devices mounted on the telescopes at Victoria, Toronto and the University of Western Ontario.

\* Prepared by Dr. Ian Halliday of the Dominion Observatory, Ottawa.

Although the optical telescopes in Canada have not been used for extragalactic research, many of the stronger sources in the field of radio astronomy are now known to be exceedingly distant objects far beyond the stars of the earth's galaxy. Canadian radio telescopes are, and will continue to be, engaged in the observation of such sources. At the same time they are also involved in the study of clouds of gas between the stars of the Milky Way system and this work complements the knowledge gained from spectroscopic research with optical telescopes. The large size of the Queen Elizabeth II telescope planned for Mount Kobau will guarantee Canadian astronomers an opportunity to become active in all fields of extragalactic astronomy and will provide essentially complete facilities for astronomical research in Canada.

## Section 5.—Other Scientific and Industrial Research Facilities

This Section outlines research facilities and activities other than those covered in Sections 1 to 4—various federal departments and agencies, provincial organizations, universities and industry. The first three types of institutions—federal, provincial and university—have, of course, an interest in problems of industrial significance. As already stated, although many Canadian industries now possess research facilities—some of them quite extensive—much of the industrial research to date has been done under government auspices.

### Subsection 1.—Federal Organizations

Research activities in the various Federal Government departments and agencies have expanded rapidly, at first because of the need for speeding up the production of raw materials, which were for many years the basis of Canada's export trad., and later because of increasing interest in the processing of raw materials, the necessity of meeting the needs of national defence and the developing consideration for many human and resource requirements. In addition to the activities of the National Research Council, Atomic Energy of Canada Limited and the Department of Energy, Mines and Resources dealt with in Sections 1 to 4, federal agencies involved in research include the Departments of Agriculture, Forestry and Rural Development, Fisheries, other Branches of the Energy, Mines and Resources, National Defence, National Health and Welfare, and Indian Affairs and Northern Development.

The scientific work of the Department of Agriculture is described in Chapter XI of this volume, the investigations conducted by the Board of Grain Commissioners in Chapter XXI, the specialized work in scientific forest research in Chapter XII, scientific services concerned with Canada's mineral resources conducted by the Department of Energy, Mines and Resources in Chapters I and XIII, investigational work of the Department of Fisheries in Chapter XV, research of the Canadian Wildlife Service of the Department of Indian Affairs and Northern Development in Chapter I, medical and other research conducted by the Department of National Health and Welfare and other agencies in Chapter VI, and the work of the Defence Research Board in Chapter XXVI.

The Department of Indian Affairs and Northern Development operates a permanent scientific research laboratory north of the Arctic Circle. This laboratory, at Inuvik, N.W.T., has year-round facilities specially designed for Arctic research and serves as a base for extensive field studies in the Western Arctic. It accommodates a permanent staff of eight scientists from many disciplines and up to 16 visiting researchers. The operation of the laboratory is in charge of a manager working under the direction of the Northern Co-ordination and Research Centre of the Department.

### Subsection 2.—Provincial Organizations

Five of Canada's provincial governments (Nova Scotia, New Brunswick, Manitoba, Saskatchewan and Alberta) have established research councils or foundations and two others (Ontario and British Columbia) have assisted financially in the setting up of such

organizations. Quebec has also announced its intention of establishing a provincial research council and industrial research centre in the near future. Most provincial governments have university laboratories to consult, particularly about local industrial and agricultural problems, and many individual departments have facilities for research in their particular fields of endeavour or assist research through the provision of financial aid to students working in those and other scientific fields. Agriculture is particularly well covered because of its importance as an export industry but the provinces are also intensely interested in their other natural resources. Their efforts in the fields of agriculture, forestry, mining and fisheries are outlined in the Chapters dealing with those subjects (see Index).

**Nova Scotia Research Foundation.**—This body was created by the Government of Nova Scotia in 1946 to give its people scientific and technical assistance in finding new and better ways to utilize the resources of the forest, the sea, the farm, the mine and the process industries. To this end it seeks to correlate and further scientific work on local problems and available resources. Within three years a new \$1,250,000 laboratory building, to be financed by an Atlantic Development Board grant, will occupy a commanding 10-acre site in Dartmouth, N.S., and will house a staff of about 100, including 70 scientists and technicians. The Foundation assists universities, colleges, research groups, industries, provincial and federal departments and individuals by loans of equipment, grants, scholarships, laboratory and summer assistants, library, cartographic, photogrammetric and translation services, and technical information. It has supported or collaborated in work on breeding new varieties of plants and root nodule bacteria; on antibiotics, poultry, blueberry culture, coal-burning equipment, the constitution and gasification of coal, the non-destructive testing of mine equipment, the utilization of anhydrite, diatomite, fish waste, gypsum, seaweed, slag, slab wood and fertilizing materials. It has conducted geophysical, geological, air pollution and seaweed surveys as well as forest aphid, forest ecology and genetic studies and has assisted studies on the nutrient cycles of lakes, on X-ray crystallography, on pressures in underground strata and on crop damage by predators. Its Geophysical Division is equipped to undertake all types of magnetometric, gravimetric, resistivity, seismic and electromagnetic explorations, and so assess the possibilities of the existence of oil, gas, potash and other economic mineral deposits in Nova Scotia and in the surrounding sea. The Technical Services Division provides free technical information to industries in the province and offers them research and development services and facilities in the fields of physics, chemistry, engineering and operations research. The Operational Research Division applies operational research techniques to problems of distribution and the utilization of natural resources of the province. A *Research Foundation Bulletin* is issued from time to time to keep industry advised of Foundation activities and also of important discoveries in science and technology. The *Research Record* provides a descriptive account of past research projects.

**The New Brunswick Research and Productivity Council.**—The aims of this Council, established by an Act of Legislature in 1962, are *inter alia* to "promote, stimulate and expedite continuing improvements in productive efficiency and expansion in the various sectors of the New Brunswick economy". The Council receives an operating grant from the provincial government and support in specific areas from federal sources. It undertakes contract research on a repayment basis from industry. Its laboratories are at present 10,000 sq. feet on a seven-acre site in Fredericton, and plans are being drawn up to extend this to a total of 50,000 sq. feet with the support of a capital grant of \$1,250,000 from the Atlantic Development Board. Staff at the beginning of 1965 numbered 20 and is expected to increase to 35 by the beginning of 1966. The work of the Council is centred on providing industry with engineering, 'trouble-shooting' and technical information services, on training courses in management techniques and on applied research in the fields of mechanical and chemical engineering, food technology, microbiology and mineral technology. Policies are established by 13 Council members representative of provincial industry, labour, government and education with the help of specialist advisory committees.

The Executive Director has supervision over and direction of the work of the staff and has charge of all matters relating to the administration of the affairs of the Council. The Chairman of the Council reports annually to the Premier of the province.

**Manitoba Research Council.**—The Manitoba Research Council consists of seven members representing natural-resource-based industry, manufacturing, the University of Manitoba and labour. Its work is financed by provincial government appropriations, although fees and service charges may be levied for its services. The objectives of the Council are to promote or carry on, or cause to be promoted or carried on, research and scientific inquiries respecting agriculture, other natural resources, industry or other segments of the economy of the province and to help secure for Manitoba the benefits of research and scientific inquiries carried on elsewhere. The preponderance of small industrial establishments in Manitoba and their need for assistance in developing a more scientifically based production capability to improve their competitive position in domestic and world markets was the major technical reason for the establishment of the Council. At present it maintains an office and staff in the Provincial Government Administration Building (Norquay Building) in Winnipeg but plans for a major research and development park, under study for the past two years, have been announced. The central core of the park will include applied research laboratories operated by the Manitoba Research Council, complete with attached test bays and small industry product research modules; a series of pilot plant operations; allied industrial and resource research establishments; and common facilities such as a technical library, translation and reproduction facilities and computer services. The aim of this Research and Development Centre is to bridge the gap between pure research and industrial production and to give Manitoba a superior capacity in developing technology coupled with the economics of large-scale output.

**Saskatchewan Research Council.**—This Council was set up in 1947 under an Act of the Government of Saskatchewan. The Council carries out research in the physical sciences, both pure and applied, with the aim of improving the provincial economy. It is therefore particularly concerned with the commercial exploitation of provincial resources and the scientific aspects of business. At first the Council had no scientific personnel and laboratory facilities of its own. Its research program was carried on at the University of Saskatchewan and was promoted by means of grants to members of the staff and scholarships to graduate students. The 1947 Act was amended in 1954 to empower the Council to acquire property, employ staff and conduct its own financial affairs. Laboratory buildings were erected on the university campus in 1957 and were extended in 1963. In the present program of research the emphasis is on water and mineral resources, fields of agriculture not covered by other organizations, and technical assistance to industry. A large part of the program is carried out by the permanent staff, now numbering about 60, but some of the Council's research is still promoted by grants to university staff. The members of the controlling body, the Council proper, are appointed by the Lieutenant-Governor in Council and consist of representatives of the government, industry and the university.

**Research Council of Alberta.**—The Province of Alberta set up a scientific and industrial Research Council in co-operation with the University of Alberta in 1921, the promotion of mineral development within the province being the chief purpose leading to its establishment. The Council operates under an Act somewhat similar to that which set up the National Research Council and is principally financed by provincial government appropriations. The present program is directed to the application of basic and applied science toward the development of the natural resources of the province and toward the establishment of new industrial operations within the province. Investigations in the Council laboratories and pilot plant are organized into two branches—the Earth Sciences Branch which includes all work on groundwater geology, geological surveys and research, mineral beneficiation and soils, and the Fuels Branch which includes work on coal, petroleum, natural gas, chemical process and product development, and gasoline and oil testing.

There are, in addition, project groups dealing with industrial engineering services, highway research, a co-operative program on cloud physics with reference to the hail problem, and a number of special projects.

The operations of the organization are controlled by a Council of ten individuals representative of the government, the university and industry. The various research projects are reviewed by advisory committees composed of specialists in each field, drawn from industry, the university and the provincial government.

The main Council laboratories are located on the University of Alberta campus in Edmonton. A new pilot plant facility has recently been completed in the Clover Bar area east of the city.

**Ontario Research Foundation.\***—The Ontario Research Foundation, established in 1928, operates as an independent corporation, deriving its powers from a special Act of the Legislature and governed by a Board of Governors appointed by the Lieutenant-Governor in Council of Ontario. The organization was financed initially by an endowment fund composed of subscriptions from commercial and industrial corporations, and from private individuals, and a grant from the provincial government. However, most of its current income is derived from contract research undertaken for industry, although income is also obtained from the various government departments for research and other work undertaken on a contract basis. The Foundation is concerned primarily with the development of industry and the development of Ontario's natural resources through the application of scientific research. However, Foundation activities are not confined to the province; research contracts are routinely handled for any organization, without reference to location. Being primarily an industrial research institution, the Foundation's main areas of scientific endeavour are chemistry, physics, metallurgy, applied microbiology, textiles and engineering. A field engineering and technical information service is provided free to industry, sponsored by the Ontario Department of Economics and Development and by the National Research Council. In 1967 the Ontario Research Foundation relocated in Sheridan Park, Ont., where it is the nucleus organization of the Sheridan Park Research Community.

**British Columbia Research Council.\***—This Council is a non-profit, industrial research institute with offices and laboratories on the campus of the University of British Columbia. Its function is to enable even the smallest firms to improve their competitive position in Canadian and world markets by the use of the most up-to-date scientific knowledge. The Council provides a free technical information service in collaboration with the National Research Council, carries out contract research for clients on a confidential basis and initiates "in house" research programs designed to promote and utilize the resources of the province. The Council is active in the areas of applied biology, chemistry, engineering, physics, operations research, industrial market studies and economic feasibility studies.

### Subsection 3.—University Research

Research conducted in the universities falls into three broad categories: research projects carried out by faculty members in addition to their teaching duties; investigations by students, under the guidance of professors, to meet the requirements for advanced degrees; and larger projects or programs undertaken co-operatively on a faculty or inter-faculty basis in large laboratories or specialized institutes connected with the university.

**Faculty Resources.**—Research is generally considered to be an important part of the function of the university teacher and many of the 15,000 full-time staff members of Canadian universities can be assumed to be engaged in such activity. With most staff members, only the time that can be spared from teaching duties can be devoted to research during the teaching session but, for those not teaching summer classes, the summer months

\* See also p. 382.

offer an opportunity for relatively uninterrupted research activity. The projects undertaken are very diverse in character and defy brief classification here but information concerning them is available in the annual reports of the presidents of the individual universities. For the humanities only, a more convenient source of information about the scope and diversity of Canadian scholarship is the "Bibliography of Scholarly Publications" included in *The Humanities in Canada*, a report prepared by F. E. L. Priestley for the Humanities Research Council of Canada and published by the University of Toronto Press in 1964.

**Student Resources.**—Prior to World War II, higher education in Canada concentrated almost exclusively on the production of trained professionals to serve the community as doctors, lawyers, engineers, etc., and only three Canadian universities had established graduate schools. In 1964-65, however, 34 universities and colleges were offering work at the graduate level, 22 of them with doctorate programs. The writing of a research thesis is an important part of the requirements for the award of the higher degrees toward which the students enrolled in these schools work. Compilations of the numbers of such students by sex, course, university, degree sought and year of expected graduation may be found in the annual series *Statistical Summary of Students Registered in the Graduate Schools of Canadian Universities in Physical and Earth Sciences, in Architecture and Engineering, and in Life Sciences*, published by the National Research Council, and in *Graduate Students in the Humanities and Social Sciences Registered at Canadian Universities 1963-64*, published by the Association of Universities and Colleges of Canada.

In 1964-65, the total enrolment (full-time and part-time) in graduate schools of Canadian universities and colleges amounted to 13,797, of whom 2,320 were women. In the same year, 569 Ph.D.s and 4,095 Master degrees and *licences* were awarded.

**Financial Resources.**—Financial support for university research comes primarily from five sources: departments and agencies of the Federal Government, quite heavily committed to support research largely in the natural and life sciences; industry, which supports both basic and applied research; private foundations, which have for many years been generous supporters of research, sometimes in selected fields; provincial governments; and the United States Government. Among these, the Federal Government is the largest single contributor. In 1964-65, its share of the total provision of funds for university research amounted to about 57 p.c., provincial governments contributed about 15 p.c., 10 p.c. came from private foundations, a little over 5 p.c. from industry and the remainder from other sources.

Although federal funds are channelled through almost a score of different departments and agencies, by far the greatest part of the total is disbursed by four of them: the Defence Research Board, the Department of National Health and Welfare, the Medical Research Council and the National Research Council. Most of the assistance is in the form of direct grants in support of research projects undertaken by university staff members but a significant part of the total program is the assistance given to graduate students working for higher degrees. Funds are also made available to defray associated expenditures, such as those incurred in the publication of research journals and the holding of conferences.

The activities of the Defence Research Board in support of university research consist mainly in the provision of funds for projects in basic sciences that are relevant to the defence of the nation. Funds administered by the Department of National Health and Welfare and the Medical Research Council go chiefly to support research in the medical and para-medical sciences. The National Research Council confines its support to the physical and earth sciences, architecture and engineering, and the life sciences. The total amount of funds disbursed by these and the other Federal Government agencies in 1964-65 was over \$25,000,000, not including more than \$8,000,000 in scholarships and bursaries paid to students.

The major source of funds for the promotion of the arts, humanities and social sciences, including research in these fields, is the Canada Council (see p. 375). It is rather difficult to define and categorize the various aspects of the Council's support of university research. Broadly speaking, however, three main categories can be identified: assistance to individual postgraduate students and research fellows; grants-in-aid of particular research projects and assistance with ancillary research activities such as the compilation of indexes and bibliographies, purchases for libraries, publication costs and travel expenses. The total disbursed for the first two of these purposes in 1964-65 was some \$270,000, distributed about equally between each.\* As to the third, a significant portion of the \$300,000 spent on special projects and grants-in-aid, and on grants to organizations could be interpreted as assistance to university research in the humanities and social sciences.

In addition, some Federal Government agencies such as the Defence Research Board and the Departments of Manpower and Immigration, Labour, and Indian Affairs and Northern Development operate programs of university grants and contracts for research in economics, anthropology, sociology and related disciplines, but the total amount made available under these programs is not large.

#### Subsection 4.—Industrial Research

Industrial research in Canada is changing very rapidly. The emergence of the country as a highly industrialized society, its entrance into multitudinous fields of production, the rapid growth of many large nation-wide industries, the serving of a discriminating domestic market and the meeting of competition from abroad have had the effect of making Canadian manufacturing establishments research conscious and many of the larger ones now possess competent research organizations.

On Nov. 29, 1962, an amendment was passed by Parliament to the Income Tax Act, allowing corporate taxpayers, commencing in 1962, to deduct 150 p.c. of their increased expenditures on scientific research for industrial purposes when computing taxable income. This amendment is evidence of the Federal Government's desire to encourage industrial research.

**Industrial Research and Development Expenditures.**—The latest biennial DBS survey of expenditures on industrial research in Canada was conducted in 1964 and provided figures for the calendar year 1963 and estimates for the year 1964. These figures are summarized in the following tables; details are contained in DBS publication *Industrial Research and Development Expenditures in Canada, 1963* (Catalogue No. 13-524).

The type of industrial research and development covered by these surveys ranges from pure research designed to obtain new knowledge in the physical and life sciences to conceiving and developing new products and processes, or major changes in products and processes, and bringing them to the stage of production. Such activities as market research and process and quality control are excluded. Companies surveyed were asked to report the cost of research and development done within the company in Canada and payments for research done outside the company in Canada; estimates of payments for research and development conducted outside the company and outside of Canada were also requested.

Total figures show considerable fluctuation in expenditures on research and development over the years surveyed. However, this fluctuation has been caused largely by variations in Federal Government contracts to the aircraft sector of the transportation equipment industry. If all funds received from the Federal Government are removed from annual expenditures, a trend of continuous expansion is revealed. In 1963, 701 firms reported research expenditures; of these, 16 accounted for one half of all intramural research expenditures.

\* In the case of scholarships and fellowships, only those awards (about 75) made to students pursuing their studies at Canadian universities and colleges are included. Many of the close to 100 grants-in-aid of research were paid to defray expenses involved in travel and study abroad but, as the grantees were generally staff members of Canadian universities, these sums are included in the total.

**1.—Total Research and Development Expenditures, 1955-64**

Year	Expenditure on Research and Development in Canada		Expenditure on Research and Development Outside Canada	Total
	Done Within Reporting Company	Done Outside Reporting Company		
	\$'000,000	\$'000,000	\$'000,000	\$'000,000
1955.....	51.4	1.9	12.1	65.4
1957.....	124.5	4.2	19.8	148.5
1958 (estimate).....	132.5	1	27.0	159.5
1959.....	96.6	3.3	21.7	121.6
1960 (estimate).....	81.7	1	27.3	109.0
1961.....	114.0	4.3	31.2	147.1 <sup>2</sup>
1962 (estimate).....	124.5	1	35.4	159.9
1963.....	160.2	8.0	37.8	201.2 <sup>2</sup>
1964 (estimate).....	190.0	1	38.5	228.5

<sup>1</sup> Included with expenditures outside Canada.<sup>2</sup> Since extramural payments include a number of payments which become intramural expenditures for the recipient firms, the totals have been adjusted to exclude duplication.

Three industries—transportation equipment, electrical products, and chemicals and chemical products—have accounted for more than one half of all research and development performed in Canada every year since 1955. In 1961, for the first time, the research and development expenditures of the transportation equipment industry, which are used largely for aircraft development, did not exceed those of every other industry. In that year the electrical products industry, which includes electronic equipment, was the leading performer of industrial research and development. In 1963, the transportation equipment industry, with \$31,200,000 assigned to research and development expenditures, was still behind the electrical products industry; however, if payments made outside Canada are included, the transportation equipment industry was first (\$39,300,000) and the electrical products industry was second (\$34,500,000).

**2.—Research and Development Expenditures in Canada, by Major Industrial Group, 1961 and 1963**

Group	1961		1963	
	Amount	P.C. of Total	Amount	P.C. of Total
	\$		\$	
Transportation equipment.....	17,373,480	15.0	31,202,042	19.1
Electrical products.....	28,199,659	24.3	33,435,679	20.5
Chemicals and chemical products.....	20,292,535	17.5	25,021,027	15.3
Totals.....	65,865,674	56.8	89,658,748	54.9
Other industries.....	50,018,214	43.2	73,788,892	45.1
<b>Grand Totals.....</b>	<b>115,883,888</b>	<b>100.0</b>	<b>163,447,640</b>	<b>100.0</b>

Table 3 shows intramural research and development expenditures over the four years 1961-64. The transportation equipment industry is given separately because of substantial fluctuations in its expenditures. Most of the other industries have increased their research and development activities over the period; the chemical and electrical products industries reported the greatest absolute increases, together having accounted for over 45 p.c. of total intramural expenditures (excluding those of transportation equipment) since 1961.

### 3.—Intramural Research and Development Expenditures, by Industry, 1961-64

Industry	1961	1962 <sup>1</sup>	1963	1964 <sup>1</sup>

<sup>1</sup> Estimates based on companies' intentions.

Among the product groups, the largest percentage of research and development expenditures was made in 1963 for the electrical products group, which accounted for 22.9 p.c. of the total compared with 18.9 p.c. in 1961. The chemicals group, including drugs and medicines, which accounted for 20.0 p.c. in 1961 and was in first place in that year, declined to 10.6 p.c. in 1963. The transportation equipment group as a whole received 18.8 p.c. of the total in 1963, of which aircraft and parts accounted for 16.7 p.c. as compared with 15.7 p.c. in 1961.

### 4.—Intramural Research and Development Expenditures, by Product Group, 1963

Product Group	Amount	P.C. of Total	Product Group	Amount	P.C. of Total
	\$			\$	
Aircraft and parts.....	26,729,646	16.7	Machinery (except electrical)...	8,271,375	5.2
Chemicals (except drugs and medicines).....	12,964,859	8.0	Motor vehicles and parts.....	2,941,619	1.8
Drugs and medicines.....	4,148,723	2.6	Petroleum and natural gas.....	6,480,500	4.1

**Section 6.—Federal Government Expenditures on Scientific  
Activities**

Information on Federal Government expenditures on scientific activities is provided by biennial surveys carried out by the DBS since 1959. Each survey covers the actual costs of the preceding fiscal year and the estimated expenditures of the current year on the scientific programs of the reporting departments and agencies. At present, only activities in the physical and life sciences are included, although eventually the surveys will be expanded to include the social sciences and humanities. For survey purposes, "scientific activities" consist of research and development, scientific data collection, scientific information and scientific scholarships. Data are also collected on capital expenditures on plant for scientific activities and on personnel employed in research and development.

As shown in Table 6, total costs of scientific activities have risen every year since 1962-63. The annual increases were 16 p.c., 11 p.c. and 19 p.c. The National Research Council and the Department of National Defence together accounted for nearly 42 p.c. of the total expenditures, National Defence being the largest individual spender. More detail on the expenditures of the individual departments and agencies is shown for 1964-65 and 1965-66 in Table 7.

### 6.—Summary Statistics of Federal Government Expenditures on Scientific Activities, Years Ended Mar. 31, 1963-66

Activity and Department or Agency	1962-63 <sup>r</sup>	1963-64 <sup>r</sup>	1964-65 <sup>r</sup>	1965-66 <sup>1</sup>
	\$'000,000	\$'000,000	\$'000,000	\$'000,000

<sup>1</sup> Estimated.<sup>2</sup> Revised to include the Water Resources Branch, which, until 1966, was part of the former Department of Northern Affairs and National Resources.<sup>3</sup> Many of the capital expenditures of the Armed Forces are unavailable.

About three quarters of the Federal Government's payments for scientific activities are for the operating costs of research and development. Table 8 reveals an interesting change in the relative importance of the performing organizations. Although the Government continues to perform most of this research and development within its own establishments, its support of outside research is increasing; in 1962-63 intramural expenditures were almost 80 p.c. of the total but in 1965-66 they accounted for only about 62 p.c. Financial support of industrial research and development has more than tripled during the past four years and now represents over one fifth of the Federal Government's current expenditures on research and development compared with about one tenth in 1962-63.

**8.—Federal Government Current Expenditures on Research and Development,  
Years Ended Mar. 31, 1963-66**

<sup>1</sup> Estimated.

As shown in Table 9, most of the federally financed research and development projects are in the physical sciences (over 70 p.c.). Engineering alone receives over 40 p.c. of the total funds available. Within the life sciences, almost half of the Federal Government's expenditures are for projects in support of agriculture.

The three most important areas of investigation are military science, which absorbs about one third of the funds spent on research and development, nuclear science and agriculture, fishing and forestry.

## Section 1.—Canadian Criminal Law and Procedure†

The system under which justice is administered in a State is never rigid. To have it so would be neither expedient nor indeed possible. A judicial system must grow and adapt itself to the requirements of the people, and the exact limits of the powers of different legislative bodies require continued definition.

The criminal law of Canada has as its foundation the criminal common law of England built up through the ages and consisting first of customs and usages and later expanded by principles enunciated by generations of judges. There is no statutory declaration of the introduction of English criminal law into those parts of Canada that are now the Provinces of New Brunswick, Nova Scotia and Prince Edward Island. Its introduction there depends upon a principle of the common law itself by which English law was declared to be in force in uninhabited territory discovered and planted by British subjects, except in so far as local conditions made it inapplicable. The same may be said of Newfoundland although the colony dealt with the subject in a statute of 1837. In Quebec its reception depends upon a Royal Proclamation of 1763 and the Quebec Act of 1774. In each of the other provinces and in the Yukon and Northwest Territories the matter has been dealt with by statute.

The judicial systems of the provinces as they exist today are based upon the British North America Act of 1867. Sect. 91 of the Act provides that "The exclusive legislative authority of the Parliament of Canada extends to . . . the criminal law, except the constitution of courts of criminal jurisdiction but including the procedure in criminal matters". By Sect. 92 (14), the legislature of the province exclusively may make laws in relation to "the administration of justice in the province, including the constitution, maintenance and organization of provincial courts, both of civil and criminal jurisdiction and including procedure in civil matters in its courts". The Parliament of Canada may, however (Sect.

\* Except as otherwise credited, this Chapter has been revised in the Judicial Section, Health and Welfare Division, Dominion Bureau of Statistics.

† Prepared by the Criminal Law Section, Department of Justice, Ottawa.

101), establish any additional courts for the better administration of the laws of Canada. It should be noted that the Statute of Westminster, 1931 effected important changes, particularly by abrogating the Colonial Laws Validity Act, 1865 (Br.) and confirming the right of a dominion to make laws having extraterritorial operation. Particulars of the federal judiciary are given in Chapter II, pp. 103-104, and provincial judiciaries are dealt with briefly at p. 105.

At the time of Confederation each of the colonies affected had its own body of statutes relating to the criminal law. In 1869, in an endeavour to assimilate them into a uniform system applicable throughout Canada, Parliament passed a series of Acts, some of which dealt with offences of special kinds and others with procedure. Most notable of the latter was the Criminal Procedure Act, but other Acts provided for the speedy trial or summary trial of indictable offences, the powers and jurisdiction of justices of the peace in summary conviction matters and otherwise, and the procedure in respect of juvenile offenders.

Codification of the criminal law through a Criminal Code Bill founded on the English draft code of 1878, Stephen's *Digest of Criminal Law*, Burbridge's *Digest of the Canadian Criminal Law*, and the relevant Canadian statutes was brought about by the Minister of Justice, Sir John Thompson, in 1892. This Bill became the Criminal Code of Canada and came into force on July 1, 1893. It must be remembered, however, that the Criminal Code was not exhaustive of the criminal law. It was still necessary to refer to English law in certain matters of procedure and it was still possible to prosecute for offences at common law. Moreover, Parliament has declared offences against certain other Acts, e.g., the Narcotic Control Act, to be criminal offences and the same was done in the Defence of Canada Regulations and the Wartime Prices and Trade Board Regulations (neither now in force) promulgated under the authority of the War Measures Act.

It is often difficult to distinguish between 'law' and 'procedure'. Procedure may be interpreted to relate simply to the organic working of the courts but, in a wider sense, it may also affect the rights or alter the legal relations arising out of any given state of facts. For present purposes it will be useful to note that writers on jurisprudence describe law as being substantive or adjective. "Substantive law is concerned with the ends which the administration of justice seeks; procedural (adjective) law deals with the means and instruments by which these ends are to be obtained."\* With reference to the criminal law, the former may be taken to include the provisions concerning criminal responsibility, the definition of 'offences' and the punishment for those offences, and the latter to include provisions for enforcement, e.g., powers to search and to arrest, for the modes of trial and for the proof of facts. Broadly speaking, the Criminal Code observes the distinction although it might appear that the provisions for preventive detention of habitual criminals and dangerous sexual offenders partake of the nature of both classes.

An examination and study of the Criminal Code was authorized by Order in Council dated Feb. 3, 1949, and the Commission assigned the task of revising the Code presented its report with a draft Bill in February 1952. After coming before successive sessions of Parliament it was finally enacted on June 15, 1954 and the new Criminal Code (SC 1953-54, c. 51) came into effect on Apr. 1, 1955. Since the new Code came into force several amendments have been made, for the most part in relation to procedure. Among the most notable of these, as well in point of procedure as of substance, are: an amendment in 1956 providing that motions for leave to appeal to the Supreme Court of Canada in criminal cases should be heard by a quorum (at least five) of judges of that Court instead of a single judge; amendments effected by SC 1959, c. 41, providing a statutory extension of the definition of "obscenity" and making provision for seizure and condemnation of offending material without a charge necessarily being laid against any person; extensive amendments relating to the allowing of time for payment of fines; amendments dealing with offences committed in aircraft in flight over the high seas; an amendment forbidding the publication in a news-

\* Salmond on *Jurisprudence*, 7th Edition, p. 496.

paper or broadcast of a report that any admission or confession was tendered in evidence at a preliminary inquiry or a report of the nature of such admission or confession unless the accused has been discharged or, if the accused has been committed for trial, the trial has ended.

The Parole Act (SC 1958, c. 38), brought into force on Feb. 15, 1959, revises the parole system and provides for the establishment of a National Parole Board (see pp. 431-432).

It is most important to note that in 1960 (SC 1960, c. 44) Parliament enacted what is known as the Canadian Bill of Rights. Although the Act sets out further details, its general scope appears in Sect. 1, which reads as follows:—

"1. It is hereby recognized and declared that in Canada there have existed and shall continue to exist without discrimination by reason of race, national origin, colour, religion or sex, the following human rights and fundamental freedoms, namely,

- (a) the right of the individual to life, liberty, security of the person and enjoyment of property, and the right not to be deprived thereof except by due process of law;
- (b) the right of the individual to equality before the law and the protection of the law;
- (c) freedom of religion;
- (d) freedom of speech;
- (e) freedom of assembly and association; and
- (f) freedom of the press."

Although the Bill of Rights has been invoked on various occasions, the courts have not held it to affect the operation of the Criminal Code.

In 1961 (SC 1960-61, cc. 43-44), the offence of murder was divided into capital and non-capital, the death penalty was abolished in relation to the offence of non-capital murder, and the term *criminal sexual psychopath* was dropped and the term *dangerous sexual offender* substituted; in 1965 (SC 1964-65, c. 53) provision was made for the right to appeal in *habeas corpus* proceedings.

## Section 2.—Adult Offenders and Convictions

Offences may be classified under two headings, "indictable offences" and "offences punishable on summary conviction". Indictable offences are grouped in two main categories: (1) offences that violate the Criminal Code and (2) offences against federal statutes. These include the graver crimes. Offences punishable on summary conviction—those not expressly made indictable—include offences against the Criminal Code, provincial statutes and municipal by-laws. It is debatable how far some summary conviction offences are of a criminal nature and whether their increase indicates an increase in crime. Many are breaches of municipal by-laws and contrary to public safety, health and comfort, as, for example, parking violations or practising trades without licence but, on the other hand, summary conviction offences may include such serious charges as assault and contributing to juvenile delinquency.

The following Subsection 1 deals with adults convicted of indictable offences, Subsection 2 with young adult offenders convicted of indictable offences, Subsection 3 with convictions for summary conviction offences and Subsection 4 with appeals.

### Subsection 1.—Adults Convicted of Indictable Offences

Statistics of indictable crimes are based on persons, so that it may be possible to evaluate the population engaged in prohibited activities and to help in the treatment of anti-social behaviour in terms of subject-centred action. In the present counting system, although individuals may be charged with more than one offence, only one offence is tabulated for each person. This offence is selected according to the following criteria

(1) if the person were tried on several charges, the offence selected is that for which proceedings were carried to the farthest stage—conviction and sentence; (2) if there were several convictions, the offence selected is that for which the heaviest punishment was awarded; (3) if the final result of proceedings on two or more charges were the same, the offence selected is the more serious one, as measured by the maximum penalty allowed by the law; (4) if a person were prosecuted for one offence and convicted of another—for example, charged with murder and convicted of manslaughter—the offence selected is the one for which the person was convicted.

In 1964 there were 46,551 adults charged with 84,546 indictable offences, of whom 42,097 were found guilty of 76,310 offences. In the previous year there were 47,616 adults charged with 86,674 indictable offences, of whom 42,914 were found guilty of 78,518 offences.

**1.—Persons Charged and Persons Convicted of Indictable Offences, with Ratio per 100,000 Population 16 Years of Age or Over, by Province, 1963 and 1964**

Yukon and Northwest Territories.....	263	182	256	97.3	170	93.4	1,138	726
<b>Canada.....</b>	<b>47,616</b>	<b>46,551</b>	<b>42,914</b>	<b>90.1</b>	<b>42,097</b>	<b>90.4</b>	<b>354</b>	<b>340</b>

Table 2 classifies indictable offences by type of offence for 1963 and 1964. Class I covers offences against the person and in 1964 there were 6,009 males and 281 females convicted in this category, mostly for assaults of various kinds. Classes II to IV deal with offences against property. Thefts predominate among the offences in these classes, and breaking and entering and robbery, serious crimes which involve acts of violence, are the next most numerous. Class V deals with offences relating to currency and Class VI with miscellaneous offences; among the latter, the most numerous convictions are for offences connected with gaming, betting and lotteries. In 1964 there were 241 men and 115 women convicted under federal statutes of whom 194 men and 106 women were offenders under the Narcotic Control Act.

**2.—Persons Charged and Convicted of Indictable Offences, by Class of Offence,  
1963 and 1964**

**Female Offenders.**—There were 4,170 female offenders convicted of indictable offences in 1964 compared with 3,736 in 1963. Of these offenders, Ontario accounted for 1,667, Quebec for 784 and British Columbia for 647. The ratio of female offenders convicted to total convictions moved upward from 8.7 p.c. in 1963 to 9.9 p.c. in 1964, ranging from 5.3 p.c. in the Yukon and Northwest Territories to 11.9 p.c. in Ontario.

### 4.—Females Convicted of Indictable Offences, by Province, 1963 and 1964

Province or Territory	Females Convicted		Females Convicted to Total Convictions	
	1963	1964	1963	1964
	No.	No.	p.c.	p.c.

10 offences.....	109	125	118	123	121
11 to 20 offences.....	392	423	416	491	476
21 offences or over.....	119	144	151	169	151
Totals, Convicted of More than One Offence.....	9,938	10,857	11,002	12,031	11,596
Totals, Convicted of One Offence.....	25,505	27,822	27,661	30,883	30,501
<b>Grand Totals.....</b>	<b>35,443</b>	<b>38,679</b>	<b>38,663</b>	<b>42,914</b>	<b>42,097</b>

**Disposition of Cases and Previous Convictions.**—As shown in Table 1, p. 415, of all suspects before the courts for indictable offences in 1964, 90.4 p.c. were adjudged guilty. There was, however, considerable variation among the provinces in this respect, the proportion ranging from 87.2 p.c. in Ontario to 96.2 p.c. in New Brunswick.

Table 6 shows that of the 42,097 persons convicted in 1964, 26.2 p.c. had no previous conviction, 14.5 p.c. had previously been found guilty of one offence and 33.4 p.c. had two or more earlier convictions; court records for the other 25.9 p.c. were not obtained. There is little change in these percentages from year to year.

**6.—Persons Charged with Indictable Offences, Disposition of Cases and Previous Convictions, 1963 and 1964**

**Sentences, Method of Trial and Court Proceedings.**—Table 7 summarizes the first court sentences given for indictable offences, Table 8 shows the method of trial and disposition of cases, and Table 9 shows persons charged and convicted of indictable crimes according to trial court.

Two kinds of sentences maintain for a certain period of time a relationship between the person dealt with by the court and the legal institutions of a community—probation and commitment to an institution. There are several types of institutions to which a person can be committed, such as penitentiaries, reformatories, gaols and industrial farms. Theoretically, every institution has a specific purpose which is supposed to be taken into account when arriving at a legal decision. In practice, however, the availability of an institution in a given community is a factor in determining the decision rendered by the court.

**Subsection 2.—Young Adult Offenders (16-24 Years) Convicted of Indictable Offences**

Attention has been focused in recent years on the needs of the young adult offenders of from 16-24 years of age who constitute a promising field for modern reception and diagnostic facilities equipped with educational, trade training and other formative disciplines. While young men and women in this age group account for under 18.7 p.c. of the total population 16 years of age or over, they form over half the criminal population

committing indictable offences. The group includes some of the most daring offenders who already may be experienced criminals as well as first offenders likely to be turned from crime by further education and training. There were 22,744 young adult offenders in 1964, a total little changed from the previous year.

### Subsection 3.—Convictions for Summary Conviction Offences

Offences punishable on summary conviction are triable by magistrates and justices of the peace under Part XXIV of the Criminal Code (SC 1953-54, c. 51) or under the provincial summary conviction Acts as the case may be. Data relating to these offences are based on convictions; no information is available on either the number of persons involved in these offences or the number of charges. In these cases, following arrest or summons to appear in court, the accused person must be tried by a magistrate or justice of the peace without the intervention of a jury. Such cases are heard in police court with a minimum of delay.

## Subsection 4.—Appeals

Appeal is an important safeguard in Canada's legal system and the conviction of a jury or judge may be appealed on the grounds that the verdict was unreasonable, that there was a wrong decision on some question of law or that there was a miscarriage of justice. In 1964 there were 2,536 appeals in indictable cases disposed of by the courts, of which 127 were Crown appeals and 2,409 appeals of the accused. Of the Crown appeals, 46 were from acquittal and 81 from sentence; of the appeals of the accused, 842 were from conviction and 1,567 from sentence. Appeals in summary conviction cases disposed of by the courts numbered 1,867 in 1964. Of these, 159 were appeals of the informant and 1,708 appeals of the accused. The informant appeals comprised 137 from acquittal and 22 from sentence and appeals of the accused comprised 1,471 from conviction and 237 from sentence.

## Section 3.—Juvenile Delinquents

*Juvenile Delinquent*, as defined in the Juvenile Delinquents Act, means any child who violates any provision of the Criminal Code or of any federal or provincial statute, or of any by-law or ordinance of any municipality, or who is guilty of sexual immorality or any similar form of vice, or who is liable by reason of any other act to be committed to an industrial school or juvenile reformatory under the provision of any federal or provincial statute. The commission by a child of any of these acts constitutes an offence known as a delinquency.

The upper age limit of children brought before the juvenile courts in the provinces varies. The Act defines a child as meaning any boy or girl apparently or actually under the age of 16 years, or such other age as may be directed in any province. In Prince Edward Island, Nova Scotia, New Brunswick, Ontario and Saskatchewan under 16 is the official age; in Alberta under 16 for boys and under 18 for girls; in Newfoundland under 17; in Quebec, Manitoba and British Columbia under 18 years. In the interests of uniformity, it has been the practice of the Dominion Bureau of Statistics to publish information about juvenile delinquents 16 years of age or over in the annual report on *Statistics of Criminal and Other Offences* and to publish data relating to those under 16 years of age in a report entitled *Juvenile Delinquents*. In 1964, 3,528 juveniles 16 and 17 years of age were found delinquent in those provinces where the upper age limit is under 17 or under 18 years of age.

Included in the statistics of juvenile delinquents are cases (alleged as well as adjudged) which were brought before the courts and dealt with formally. A case was counted separately each time a child appeared before the court for a new delinquency or delinquencies. In instances where multiple delinquencies were dealt with at one court appearance, only one delinquency—the most serious—was selected for tabulation. Delinquencies reported as informal cases by the courts were not included nor were cases of children presenting conduct problems which were not brought to court or which were dealt with by the police, social agencies, schools, or youth-serving agencies. Thus, community facilities for dealing with children's problems may have an influence on the number of cases referred to court and, therefore, an effect on the statistics of juvenile delinquents.

**Section 4.—Correctional Institutions and Training Schools****Subsection 1.—Statistics of Correctional Institutions and Training Schools**

Correctional institutions may be classified under four headings: (1) Penitentiaries—operated for adult offenders by the Federal Government in which, generally speaking, sentences of over two years are served; (2) Reformatories—operated for adult offenders by the provinces in which individual sentences of up to two years are served; (3) Common Gaols—operated for adult offenders by the provinces or counties in which sentences of up to two years can be served but in which, generally speaking, short-term sentences are served; and (4) Training Schools—operated by the provinces or private organizations under provincial charter for juvenile offenders serving indefinite terms up to the legal age for children in the particular province.

There is a limited amount of statistical information available with respect to these types of institution. "In custody" figures shown in Table 23 for penitentiaries refer only to those persons under sentence, but the figures for admissions include those received from courts as well as by transfer from other penitentiaries and by cancellation of tickets-

of-leave and paroles. Figures for releases include expiry of sentences, transfers between penitentiaries, releases on ticket-of-leave and parole, deaths, pardons and releases on court order. In custody figures for provincial and county institutions may include, in addition to those serving sentences, persons awaiting trial, on remand for sentence or psychiatric examination, awaiting appeal or deportation, any others not serving sentence and, for training school population, juveniles on placement.

Population figures in Tables 23 and 24 are for a given day of the year, which is Mar. 31 except for Quebec gaols where populations are counted as of Dec. 31. These figures represent, in effect, a yearly census of correctional institutions and, as such, are not indicative of the daily average population count. For instance, if an abnormal number of commitments is made to a certain institution on or just prior to Mar. 31, the result will be an unrepresentative population total for the institution in that year.

With regard to the fluctuations that might have occurred during the year between census days, the total population of correctional institutions has shown a general increase since Mar. 31, 1959; totals for training schools and provincial adult institutions have shown a tendency to level off or decline slightly but penitentiary population has increased steadily.

### Subsection 2.—The Canadian Penitentiary Service\*

The Penitentiary Service operates under the Penitentiary Act (SC 1960-61, c. 53) and is under the jurisdiction of the Solicitor General of Canada. It is responsible for all federal penitentiary institutions and for the care and training of persons sentenced or

\* Prepared under the direction of A. J. MacLeod, Commissioner of Penitentiaries, Ottawa.

committed thereto. The Commissioner of Penitentiaries, under the direction of the Solicitor General, has control and management of the Service and all matters connected therewith. In the year ended Mar. 31, 1966, the federal penitentiary system consisted of six maximum security, four medium security and fifteen minimum security institutions, all for males; one prison for women; one maximum security prison camp for males of the Freedomite Doukhobor Sect; one security institution for elderly recidivists; and three Correctional Staff Colleges.

The six maximum security institutions receive inmates sentenced by the courts to imprisonment for terms of from two years to life. These are located at New Westminster, B.C., Prince Albert, Sask., Stony Mountain, Man., Kingston, Ont., St. Vincent de Paul, Que., and Dorchester, N.B. Persons sentenced to penitentiary terms in Newfoundland are held in the provincially operated institution at St. John's, under financial arrangements authorized by Sect. 14 of the Penitentiary Act (SC 1960-61, c. 53).

The medium and minimum security institutions and the camps receive inmates transferred from the maximum security (receiving) institutions on the basis of their suitability for special forms of training, including vocational training. Of the medium security institutions, two—Collin's Bay Penitentiary and the Joyceville Institution—are within a few miles of Kingston. The other two—the Federal Training Centre and the Leclerc Institution—are close to St. Vincent de Paul.

Eight minimum security correctional camps are operated as extensions of a main institution in their respective areas. These are located at William Head and Agassiz, B.C.; Beaver Creek and Landry Crossing near Bracebridge and Petawawa, Ont.; Gatineau (Gatineau Park) and Valleyfield, Que.; Blue Mountain near Gagetown, N.B.; and Springhill, N.S. Six minimum security farm annexes operate as extensions of the penitentiaries at Dorchester, St. Vincent de Paul, Collin's Bay, Joyceville, Stony Mountain and Prince Albert, respectively. There is also a minimum security industrial satellite at St. Vincent de Paul.

The Prison for Women at Kingston, Ont., receives inmates transferred upon committal to penitentiary in any part of Canada. Before Dec. 1, 1960, it operated as a detached portion of Kingston Penitentiary.

The special security Prison Camp for Freedomites who have been sentenced to imprisonment in penitentiary is located near Agassiz, B.C., and is called Mountain Prison. When the sentences of the female Doukhobor prisoners were completed, part of Mountain Prison was converted to an institution for older recidivists.

Six new institutions were in various stages of construction during 1965-66. They are located as follows: medium security institutions at Springhill, N.S., Cowansville, Que., Warkworth, Ont., and Drumheller, Alta.; a Special Correctional Unit at St. Vincent de Paul, Que.; and an institution for Narcotic Drug Addicts at Matsqui, B.C.

The three Correctional Staff Colleges—one at Kingston, one at St. Vincent de Paul and one at New Westminster—are operated for the training of recruits and for the advanced training of penitentiary officers. The Kingston College serves English-speaking or bilingual officers, the St. Vincent de Paul College is primarily for French-speaking officers from all parts of Canada, and the Western Staff College trains the recruits for the institutions in the Western Region. These Staff Colleges provide excellent facilities for Service-wide conferences of institutional heads and other special groups of officers.

The Headquarters of the Service is located in Ottawa. Regional directorates have been established at New Westminster, B.C., Kingston, Ont., and St. Vincent de Paul, Que., for the Western, Ontario and Quebec areas, respectively.

**Subsection 3.—The National Parole System\***

Parole is a means by which an inmate in any correctional institution in Canada, if he gives definite indication of his intention to reform, can be released from prison. The purpose of parole is the protection of society through the rehabilitation of the inmate. It is essential for the public to understand that the true purpose of punishment should be the reformation of the offender and not just vengeance or retribution but, since the Parole Board is as much concerned with the protection of society as with the reformation of the inmate, it recognizes that the welfare of an individual inmate must not be allowed to impair the success of the parole system or the public safety.

It is the function of the Parole Board to select those inmates who show some sincere intention to reform and to assist them in doing so by granting parole. The inmate then is allowed to serve the remainder of his sentence in society, but under supervision. He is subject to restrictions and conditions as to his conduct and behaviour, designed for his welfare and the protection of others. The Board is not a reviewing authority and is not concerned with the propriety of the conviction or the length of the sentence but only with the problem of deciding in each case whether or not there is chance of reformation. Parole is not a matter of clemency and is not granted on compassionate or humanitarian grounds but only if there appears to be at least a reasonable chance that the inmate will lead a law-abiding life. The treatment and training program in the institution is a vital part of the correctional process and parole is an extension of this training outside the institution. It is not a matter of pampering prisoners but of trying to give as many of them as possible a chance to rehabilitate themselves.

The National Parole Board, composed of a chairman and four members (one woman), was formed in January 1959. It operates under the authority of the Parole Act (SC 1958, c. 38) which came into force on Feb. 15, 1959, replacing the Ticket-of-Leave Act. The Board has jurisdiction over any adult inmate of any prison in Canada convicted of an offence against an Act of the Parliament of Canada; it also has jurisdiction to revoke or suspend any sentence of whipping or any order made under the Criminal Code prohibiting any person from operating a motor vehicle.

The decision of the Board with respect to any one inmate is based on reports it receives from the police, the trial judge or magistrate and from various people at the institution who deal with him. Reports are also obtained, when available, from a psychologist or psychiatrist and, if necessary, a community investigation is conducted to secure as much information as possible about his family and background, his work record and his position in the community. From these reports, an assessment is made to determine whether or not he has changed his attitude and is likely to lead a law-abiding life.

An inmate need not obtain the services of a lawyer to apply for parole. He may apply by sending a letter to the Board and is assisted in preparing such an application at the institution or another person may apply on his behalf. The Board automatically reviews all sentences of over two years. As soon as an application is received, investigation is begun and the results presented to the Board for decision. All applications and reports are processed by the Parole Board staff at Ottawa but regional officers, of whom there are 55 stationed at 16 centres across the country, interview applicants for parole in their respective areas, giving them an opportunity of making verbal representations to a representative of the Board. The regional officers submit to the Board a report of each interview with an assessment of the inmate's suitability for parole.

A person on parole is under the care of a supervisor, usually an after-care agency worker or a probation officer, who reports to the regional officer. If he violates the conditions of

\* Prepared by T. G. Street, Chairman, National Parole Board, Ottawa.

his parole or commits a further offence or misbehaves in any manner, the Board may revoke his parole and return him to the institution to serve that part of his sentence outstanding at the time his parole was granted. If a parolee commits an indictable offence, his parole is automatically forfeited and he is returned to the institution to serve the unexpired balance of his sentence plus any new term to which he is sentenced for the commission of the new offence. The regional officer may also issue a Warrant of Suspension and have a parolee placed in custody if it is necessary to prevent a breach of any term or condition of the parole. These officers are thus able to exercise effective and adequate control over all parolees in their respective areas.

During the seven years of its operation, the Parole Board has granted parole to 14,169 inmates. Of these 1,571 were returned to prison but only 779 of them forfeited their paroles for commission of an indictable offence; the other 792 had their paroles revoked for misbehaviour or a minor offence. Thus there has been a success rate of almost 90 p.c., over the seven-year period, of men and women who have succeeded in abiding by the terms of their parole.

## Section 5.—Police Forces and Crime Statistics

**Organization of Police Forces.**—The police forces of Canada are organized in three groups: (1) the federal force, which is the Royal Canadian Mounted Police; (2) provincial police forces—the Provinces of Ontario and Quebec have their own provincial police forces but all other provinces engage the services of the Royal Canadian Mounted Police to perform parallel functions within their borders; and (3) municipal police forces—most urban centres of reasonable size maintain their own police force or engage the services of the provincial police, under contract, to attend to police matters. In addition, the Canadian National Railways, the Canadian Pacific Railway Company and the National Harbours Board have their own police forces.

*The Royal Canadian Mounted Police.*—The Royal Canadian Mounted Police is a civil force maintained by the Federal Government. It was established in 1873 as the North-West Mounted Police for service in what was then the North-West Territories and, in recognition of its services, was granted the use of the prefix "Royal" by King Edward VII in 1904. Its sphere of operations was expanded in 1918 to include all of Canada west of Port Arthur and Fort William and in 1920 it absorbed the Dominion Police, its headquarters was transferred from Regina to Ottawa and its title was changed to Royal Canadian Mounted Police.

The Force is under the control of the Solicitor General of Canada and is headed by a Commissioner who holds the rank and status of a Deputy Minister. Officers are commissioned by the Crown and are selected from the non-commissioned ranks. The Force has complete jurisdiction in the enforcement of the federal statutes. By arrangement between the federal and provincial governments, it enforces the provincial statutes and the Criminal Code in all provinces exclusive of Ontario and Quebec and under special agreement it polices some 122 municipalities. It is the sole police force in the Yukon and North-west Territories, where it also performs various administrative duties on behalf of certain departments of the Federal Government. It maintains liaison officers in London and Washington and represents Canada in the International Criminal Police Organization, which has headquarters in Paris.

Of the Force's 17 divisions, 12 are actively engaged in the work of law enforcement, as are some 43 subdivisions and 638 detachments. The five remaining divisions are "Headquarters", "Depot" and "N", which are maintained as training centres, and "Marine" and

"Air", which support the operations of the land divisions. A teletype system links the widespread divisional headquarters with the administrative centre at Ottawa and a network of fixed and mobile radio units operates within the provinces. Focal point of the Force's criminal identification work is the Headquarters Identification Branch; its services, together with those of the divisional and subdivisinal units and the four Crime Detection Laboratories, are available to police forces throughout Canada. The Force operates the Canadian Police College at which Force members and selected representatives of other Canadian and foreign police forces may study the latest advances in the fields of crime prevention and detection.

The uniform strength of the Force at Mar. 31, 1966 was 7,518, including marine constables and special constables, at which time it maintained some 2,090 motor vehicles, 20 aircraft, 52 ships and boats, 300 sleigh dogs, 26 police service dogs and 240 horses.

*Quebec Provincial Police Force.*—The Quebec Provincial Police Force is responsible for the maintenance of peace, order and public safety in the province, and for the prevention and investigation of criminal offences and of violation of all laws of the province.

The province is divided into two almost equal parts known as the Montreal Division and the Quebec Division. The Montreal Division is divided into three subdivisions with headquarters at Granby, Hull and Montreal. The Quebec Division is also divided into three subdivisions with headquarters at Chicoutimi, Quebec and Rimouski. There are 113 detachments throughout the province—63 in the Montreal Division and 50 in the Quebec Division. The Force at the end of 1965 had 2,311 regular members—officers, non-commissioned officers and constables.

The Quebec Provincial Police Force is under the command of a Director General who is assisted by an officer holding the rank of Deputy Director General. Each Division is headed by an Assistant Director. A commissioned officer is in command of each subdivision.

*Ontario Provincial Police Force.*—The Ontario Provincial Police Force with a total authorized strength of over 3,900 (1966), enforces federal and provincial law in areas that do not maintain a police department and on all King's Highways. The Force is administered, from General Headquarters at Toronto, by a Commissioner who has the rank and status of a Deputy Minister under the Attorney General. Other senior executive officers include two Deputy Police Commissioners and five Assistant Commissioners. The Force has two principal divisions—Operations and Services—which are administered under the supervision of the Deputy Commissioner, Operations and Deputy Commissioner, Services, respectively. In turn, the five Divisions at the next level are administered by their respective Assistant Commissioners: Assistant Commissioner, Field; Assistant Commissioner, Traffic; Assistant Commissioner, Administration; Assistant Commissioner, Staff Services; and Assistant Commissioner, Special Services. Specialized branches under Special Services include Criminal Investigation, Liquor Law Enforcement, Precious Metals Theft, Anti-gambling, Anti-rackets, Auto Theft, and Intelligence Branches. Under Administration, the Central Records Branch offers a 24-hour, seven-day-week service to all police departments in Ontario on such matters as fingerprints records, criminal records, dry cleaning and laundry mark identification, photographic service, stolen and recovered property lists.

In addition to policing those parts of Ontario that are without municipal police forces, the Ontario Provincial Police Force is responsible for providing services to the municipal forces in specialized areas, including the investigation of serious crime and, upon request, supplies sufficient manpower to ensure proper policing within the municipalities in emergency situations.

In the field, there are 217 detachments controlled through 17 district headquarters located at Chatham, London, Burlington, Niagara Falls, Toronto, Mount Forest, Barrie, Peterborough, Belleville, Perth, Long Sault, North Bay, Sudbury, Sault Ste. Marie, South Porcupine, Port Arthur and Kenora. In addition, there are 38 municipalities policed under special contract.

The Force operates one of the largest frequency-modulation radio networks in the world, with 78 fixed radio stations and more than 950 radio-equipped mobile units, including motorcycles, marine units and aircraft. The Force also operates an interprovincial telecommunications network connecting all 17 districts as well as other police departments on a local, national and international basis. Because of territorial peculiarities, the northern districts augment their normal transportation facilities by the use of snowmobiles, swamp buggies, dog teams and a variety of rail transport facilities.

In addition to regular constable recruitment, the Force has a cadet program, making it possible for qualified young men to create for themselves a career in a long-established police force. A recent important development in the progress of this Crown Force occurred when legislative enactment provided that all ranking officers from inspector up to and including the Commissioner, receive the Queen's Commission in the same manner as the Armed Forces.

*Municipal Police Forces.*—Provincial legislation makes it mandatory for cities and towns to furnish adequate municipal policing for the maintenance of law and order in their communities. Also, all villages and townships or parts of townships that have a population density and a real property assessment sufficient to warrant maintenance of a police force, and have been so designated by Order in Council, are made responsible for the adequate policing of their municipalities.

**Uniform Crime Reporting.**—A new method of reporting police statistics (police administration, crime and traffic enforcement statistics), known as the Uniform Crime Reporting Program, was started on Jan. 1, 1962. The program was developed by the Dominion Bureau of Statistics in co-operation with the Canadian Association of Chiefs of Police Committee on Uniform Crime Reporting. Historically, the police have compiled selected statistics to meet their own needs and have been prepared to give an account of crimes in their jurisdictions. However, the definitions and methods for collecting these statistics were not uniform and the data could not be expressed with consistency on a national, provincial or local basis. With the development of the Uniform Crime Reporting Program, meaningful statistical aggregates became possible. The police were supplied with a manual of instructions containing standard definitions for the reporting of police administration, crime and traffic enforcement statistics on specially designed statistical forms to be submitted to the DBS.

*Police Personnel.*—As shown in Table 25, police personnel in Canada numbered 37,935 at the end of 1965, including 32,010 sworn-in policemen, 5,551 other full-time employees serving as clerks, technicians, artisans, commissionaires, guards, special constables, etc., and 374 cadets. The ratio of police personnel per 1,000 population was 1.9 and the ratio of police was 1.6. Provincial ratios for police personnel ranged from 1.0 to 5.0 per 1,000 persons and for police only from 0.9 to 4.9. In 12 selected metropolitan areas there were 13,929 police personnel including 12,096 police and 1,833 cadets and other full-time employees. Total municipal police personnel numbered 22,112 made up of 20,975 in municipal forces, 1,045 Royal Canadian Mounted Police and 92 provincial police under municipal contracts.

There were two policemen killed by criminal action in 1965 and three lost their lives accidentally while on duty. Police transport facilities at the end of the year included 5,978 automobiles, 905 motorcycles, 584 other motor vehicles, 363 boats, 20 aircraft, 319 horses and 82 service dogs.

*Crime Statistics.*—Table 27 shows the number of crimes dealt with by the police in 1965, including offences under the Criminal Code, federal statutes, provincial statutes and municipal by-laws; offences cleared by charge and otherwise; and the number of adults and juveniles charged. Offences reported or known to the police but proved unfounded are not shown in the table but numbered 43,438, including 36,618 under Criminal Code classifications, 1,782 under federal statutes, 3,860 under provincial statutes and 1,178 under municipal by-laws, excepting traffic.

During 1965, the police reported 53,204 offences committed against the person, including 243 murders, 7,443 rape and other sexual offences, and 45,373 offences of wounding and other assaults (not indecent); all offences against the person resulted in the charging of 22,933 persons, 1,405 of them juveniles. During the year there were 378,124 cases of robbery, theft and other offences against property, resulting in 74,276 persons charged, 24,658 of them juvenile males and 2,062 juvenile females; 32,401 cases of fraud, false pretences, forgery, etc.; 1,864 of prostitution; 2,156 gaming and betting; 3,275 offensive weapons; and 151,655 other Criminal Code offences. Of the 29,614 federal statute offences reported, 655 were under the Narcotic Control Act and 113 under the controlled drug part of the Food and Drugs Act; these two classifications resulted in the charging of 637 persons.

Provincial and territorial fire marshals and commissioners reported 1,600 suspected or known incendiary offences, of which 176 were proved unfounded; 399 offences were reported cleared by charge, resulting in 342 adults and 175 juveniles being charged.

The number of motor vehicles stolen was 37,419 or 558.3 per 100,000 vehicles registered; 34,325 or 91.7 p.c. of these vehicles were recovered. Police were asked to locate 17,570 missing adults and 27,313 missing juveniles; 16,970 adults and 27,124 juveniles were found. The number of drownings reported by the police was 1,359.

<sup>1</sup> Except traffic.<sup>2</sup> Except traffic, Narcotic Control Act and Food and Drugs Act.

Table 28 shows that, during 1965, police departments in Canada reported 84,726 Criminal Code traffic offences, resulting in 56,130 persons charged, 1,188 of them females. Total charges reported under federal statutes, provincial statutes and municipal by-laws

numbered 1,850,508, excluding parking violations; the latter numbered 4,083,595, most of them reported by municipal police. The number of traffic accidents reported was 617,452, of which 4,109 involved fatalities, 102,727 resulted in injuries, 313,446 involved property damage of over \$100 and 197,170 involved damage of \$100 or less. There were 4,869 persons killed in traffic accidents, including 3,448 drivers and passengers, 1,254 pedestrians, 143 cyclists and 24 others; persons injured numbered 149,324.

CHAPTER X.—LAND USE AND RENEWABLE  
RESOURCE DEVELOPMENT\*

CONSPECTUS

	PAGE		PAGE
SECTION 1. LAND RESOURCES.....	440	SECTION 3. INTERNATIONAL BOARDS AND COMMISSIONS.....	443
SECTION 2. FEDERAL AGENCIES CONCERNED WITH RESOURCE USE.....	442	SECTION 4. FEDERAL AND FEDERAL-PROVINCIAL RESOURCE DEVELOPMENT PROGRAMS	445

*The interpretation of the symbols used in the tables throughout the Year Book will be found on p. viii of this volume.*

Canada's era of settlement ended as the northern areas of the Prairie Provinces came under cultivation in the 1930s. Government policies, previously directed mainly toward the large-scale utilization of natural resources, have evolved toward concern with land use and the socio-economic circumstances of people involved in renewable resource-based industries. Undiscriminating land settlement policies and ill-advised individual choices had resulted in the settlement of some submarginal land throughout Canada but most notably in the southern areas of Alberta and Saskatchewan, creating requirement for land use adjustment even before settlement had been completed. Far more significant than this, however, is the technological revolution in agriculture which has occurred during the past three decades concurrently with improvements in transportation and a strong trend toward the concentration in urban centres of a growing population.

Accompanying these changes has been an altered pattern of land use resulting from individual response to economic factors; but the rate of such adjustment has not been concomitant to the magnitude of the socio-economic dislocation in rural areas. Because of this situation, and because of increased concern with forest management, water pollution control, recreational resources and wildlife management, the trend has been for a vast increase in public decision-making with respect to resource management and use. Implicit in this has been the need for improved legislative-administrative organization relative to natural resources.

One of the most important responses to this need was the "Resources for Tomorrow" Conference held in 1961 to permit examination of problems of resource use and of developing an organizational framework suited to the modern requirement for integrated, comprehensive resource-use planning for social and economic development. Subsequent to this Conference, the Canadian Council of Resource Ministers, composed of one representative from each province and one from the Federal Government, was established to perform a similar function on a continuing basis, with the aid of a Montreal-based staff. Significant among the various activities of the Council has been the planning of a further major conference on "Pollution and Our Environment", for the autumn of 1966. Earlier federal investigations of significance to the general problem of organization for resource use were: the Senate of Canada Special Committee on Land Use, established in 1957 and continuing until 1963; the House of Commons Standing Committee on Mines, Forests and

\* Prepared by D. F. Symington, Staff Consultant to the Canadian Council of Resource Ministers.

Waters; and the National Conference on Reconstruction, held in 1945. Notable among several provincial government activities along similar lines is the annual British Columbia resources conference.

Constitutionally, administration and disposition of natural resources rests mainly with the provincial governments. Under the British North America Act, fisheries were under federal jurisdiction and the federal and provincial governments shared legislative authority with respect to agriculture, international and interprovincial waters, etc., with federal legislation taking precedence over provincial legislation should conflict arise; however, subsequent interpretations of the Act have established most aspects of control of resources as being matters of provincial jurisdiction. As well, in the years following Confederation certain provinces, by agreement, assumed varying degrees of responsibility for administering the fisheries legislation and other federal resources legislation. Within this general framework, the Federal Government has taken certain steps to establish a national resources policy, to co-ordinate the activity of the various federal departments concerned with resources and relevant social and economic problems, to undertake or share in research, and to provide initiative and financial assistance in the establishment of programs of resource adjustment and development; and provincial governments have moved significantly to accommodate their administrative structures to the need for integrated, planned resource adjustment and development. Aspects of this trend to accommodate legislative-administrative organization to emerging needs will be apparent in the following descriptions of federal and federal-provincial agencies and programs. In addition, a great number of provincial programs have been instituted or strengthened, furthering the trend toward integration of activities relative to renewable natural resources.

Federal activity in resource conservation programs began before the turn of the century, starting in 1877. This included the work of the now long-disbanded Department of the Interior in the field of surveying and development of water resources in Western Canada. Later programs included those conducted under the Prairie Farm Rehabilitation Act which was enacted in 1935 to aid in the rehabilitation of drought-stricken areas of the prairies, the work on the eastern seaboard conducted under the Maritime Marshland Rehabilitation Act of 1948, water development projects under the terms of the Canada Water Conservation Assistance Act of 1953, the broad and comprehensive resource development and adjustment program being undertaken under the terms of the Agricultural Rehabilitation and Development Act of 1961, and projects under the Atlantic Development Board Act of 1962. There have been numerous programs under the International Boundary Waters Treaty Act of 1911 by the International Joint Commission established to fulfil the provisions of the treaty and the confirming Act. Over this period many projects of varying nature and scope have been undertaken under legislation such as the above and under the terms of reference of the federal and provincial government departments and agencies concerned with resource development—all toward the basic objective of achieving more effective utilization of Canada's land and water resources and the provision of a greater degree of economic stability and equitability for the rural areas of the country.

## Section 1.—Land Resources

Information available regarding Canada's land resources is shown in Table 1, where the land area is classified as occupied agricultural, forest and "other" land, the last including urban land, road allowances, grass and brush land and all waste land such as open muskeg, swamp and rock. The Department of Forestry and Rural Development estimates that about 48 p.c. of the land area of Canada is forested and, according to the Census of 1961, less than 8 p.c. is classed as occupied farm land. A great part of the 1,606,788 sq. miles of "other" land is located in the Yukon and Northwest Territories which together have a land area of 1,458,784 sq. miles. The occupied farm land in these Territories is practically nil and the forest area is estimated at 275,800 sq. miles.

## 1.—Land Area classified as Occupied Agricultural or Forest, by Province

NOTE.—Figures for occupied agricultural land were obtained from the 1961 Census; areas of forest land were compiled by the Department of Forestry and Rural Development from estimates supplied by the Forestry Service in each province.

<sup>1</sup> Less than half a square mile.

<sup>4</sup> Areas incapable of producing crops of merchantable timber because of adverse climatic, soil or moisture conditions, and reserve forest lands for which no inventories are available.

<sup>2</sup> Included in *Forest Land*; duplication eliminated in the item *Net Productive Land*.

<sup>3</sup> Includes areas of recent burn, cut-over

<sup>5</sup> Includes only occupied agricultural land (less forest, woodland) plus productive forest land.

<sup>6</sup> Comprises all other

<sup>7</sup> *Net Productive Land* plus *Non-productive Forest Land* plus *Other Land*.

On the basis of information currently available, it is estimated that, in addition to the present arable land across the country, about 40,000,000 acres of virgin land can be used for arable crops if the need arises. However, most of these reserves will require clearing or other improvement measures before they can be used for agriculture. In addition to the present arable land and potentially arable land, 55,000,000 to 60,000,000 acres are suitable for wild pasture.

As the Canada Land Inventory progresses (see p. 447), a great deal of detailed information is becoming available on the land resources of the country, their present utilization and their capability.

## Section 2.—Federal Agencies Concerned With Resource Use

Numerous agencies of the Federal Government have a more or less direct concern with renewable resources. Functions vary from academic research to direct manipulation of resources in certain geographical areas. Direct action, however, is limited mainly to areas under federal jurisdiction—the Northwest Territories, Indian reservations, limited federal forest preserves, National Parks, certain international parks and waterways, certain aspects of fisheries and matters relative to public health. More usual by far than direct action by the Federal Government are federal-provincial agreements under which the Federal Government shares the costs of programs. Such aid is often conditional on the province agreeing to carry out the program in accordance with criteria established by the Federal Government. The capacity of the Federal Government to establish cost-sharing programs is inherent in its broad fiscal powers and in its research and data-gathering programs that provide a basis for broader assessment of issues and alternatives.

Federal agencies whose activities impinge fairly directly on renewable resource development and use are as follows:—

CANADA DEPARTMENT OF AGRICULTURE—Research Branch, Economics Branch, Prairie Farm Rehabilitation Administration, and Information Division

DEPARTMENT OF FISHERIES—Conservation and Protection Service, Resource Development Service, Information and Consumer Service, and Economics Service

DEPARTMENT OF FORESTRY AND RURAL DEVELOPMENT—Directorate of Program Co-ordination, Information and Technical Services Division, Forest Products Research Laboratory, ARDA Administration, Maritime Marshlands Rehabilitation Administration, and Eastern Rockies Forest Conservation Board

DEPARTMENT OF INDIAN AFFAIRS AND NORTHERN DEVELOPMENT—Council of the Northwest Territories, Natural and Historic Resources Branch (including the Canadian Wildlife Service), Northern Administration Branch, and Indian Affairs Branch

DEPARTMENT OF PUBLIC WORKS—Harbours and Rivers Engineering Branch, Development Engineering Branch and Economic Studies Branch

DEPARTMENT OF TRANSPORT—Marine Works Branch, Marine Hydraulics Branch, and Meteorological Branch

DEPARTMENT OF NATIONAL HEALTH AND WELFARE—Occupational Health Division, and Public Health Engineering Division

DEPARTMENT OF FINANCE—Economic Analysis and Government Finance Division, Resources and Development Division, and a Division concerned with Taxation, Federal-Provincial Relations and Pensions and Social Insurance

DEPARTMENT OF VETERANS AFFAIRS—Veterans' Land Administration

DEPARTMENT OF ENERGY, MINES AND RESOURCES—currently being organized into four Groups concerned with research, water management, energy development and mineral development, which will include agencies under the former Department of Mines and Technical Surveys, i.e., Surveys and Mapping Branch, Geological Survey of Canada Branch, Geographical Branch, Marine Sciences Branch, and will also include water and resources agencies transferred from the former Department of Northern Affairs and National Resources

NATIONAL RESEARCH COUNCIL OF CANADA

NATIONAL ENERGY BOARD

ECONOMIC COUNCIL OF CANADA

ATLANTIC DEVELOPMENT BOARD.

Various Crown corporations, credit agencies, advisory committees and boards, and quasi-governmental organizations also have interests in the fields of resource development, including:—

FARM CREDIT CORPORATION  
CANADIAN COMMITTEE ON FRESHWATER FISHERIES RESEARCH  
FISHERIES RESEARCH BOARD OF CANADA  
NORTHERN CANADA POWER COMMISSION  
ADVISORY COMMITTEE ON NORTHERN DEVELOPMENT  
ADVISORY COMMITTEE ON WATER USE POLICY  
CENTRAL MORTGAGE AND HOUSING CORPORATION  
NATIONAL HARBOURS BOARD  
ST. LAWRENCE SEAWAY AUTHORITY  
MUNICIPAL DEVELOPMENT LOAN BOARD  
NORTHERN TRANSPORTATION COMPANY  
INTERDEPARTMENTAL ADVISORY COMMITTEE ON FORESTRY STATISTICS  
INTERDEPARTMENTAL CO-ORDINATING COMMITTEE FOR ARDA  
NATIONAL COMMITTEE FOR THE INTERNATIONAL HYDROLOGIC DECADE.

The Dominion Bureau of Statistics has, of course, functions relevant to nearly all aspects of the national life, including resources. The above agencies are not identified with a particular department function more or less autonomously but are usually associated with a Minister of the Crown for purposes of reporting to Parliament (see pp. 142-150). Although each of these agencies carries out programs bearing on the use and development of natural resources, direct unilateral action is unusual except relative to lands and waters under the jurisdiction of the Federal Government. Major exceptions are the Prairie Farm Rehabilitation Administration programs and significant federal programs for the conservation and development of the various fisheries resources.

Major items of federal legislation relative to renewable resources include:—

The Department of Agriculture Act  
The Prairie Farm Rehabilitation Act  
The Farm Credit Act  
The Department of Fisheries Act  
The Forestry Development and Research Act  
The Agricultural and Rural Development Act  
The Department of Northern Affairs and National Resources Act  
The National Parks Act  
The Migratory Birds Convention Act  
The International River Improvements Act  
The Dominion Water Power Act  
The Canada Water Conservation Assistance Act  
The Atlantic Provinces Power Development Act  
The Navigable Waters Protection Act  
The Veterans' Land Act  
The Economic Council of Canada Act  
The National Energy Board Act  
The National Harbours Board Act  
The St. Lawrence Seaway Authority Act  
The Municipal Development and Loan Act.

### Section 3.—International Boards and Commissions

The continental context of Canadian resource management is implicit in the purposes of the various international boards and commissions in which Canada participates. Of the 35 or more, some 25 are concerned with water; most of the remainder have to do with fisheries.

THE INTERNATIONAL JOINT COMMISSION was established to fulfil the provisions of the International Boundary Waters Treaty of 1909 between the United States, Great Britain and Canada. Three commissioners were appointed by the President of the United States

and three by the Government of Canada. The Commission deals with the use, obstruction and diversion of boundary waters and rivers crossing the International Boundary. It conducts investigations on water use problems with international implications and reports its findings with recommendations to both governments.

International boards of control which report to the International Joint Commission are: a ten-member International St. Lawrence Board of Control, concerned with levels of Lake Ontario and the regulation of outflow from the lake; a two-member St. Croix Board, concerned with water levels and supervision of dam construction; the Lake of the Woods Board, the Lake Superior Board, the Rainy Lake Board and the Kootenay Board, all of which are concerned with water levels; a two-member Columbia River Board, concerned with the effects of the Grand Coulee dam; a four-member Souris River Board, concerned with allocation of water; and a five-member Niagara Board, concerned with levels of Grass Island Pool and the Lake Erie ice boom. Functions similar to those of the Boards are carried out by two accredited officers relative to measurement and apportionment of waters of the St. Mary and Milk Rivers. Also reporting to the International Joint Commission are five international engineering boards for the St. John, St. Croix, Souris and Red, Pembina and Columbia Rivers. A seven-member Technical Advisory Board on Air Pollution is concerned with air pollution by ships plying the Detroit River. An Advisory Board on Control of Pollution of Boundary Waters, reporting to the International Joint Commission, is concerned with the connecting channels of the Great Lakes, and other boards concerned with pollution are: the Advisory Board on Pollution Control-St. Croix River, the International Red River Pollution Board, the International Lake Erie Water Pollution Board and the International Lake Ontario-St. Lawrence Water Pollution Board. The eight-member International Great Lakes Levels Board is concerned with investigation and study of water levels of international or boundary waters, reporting to the International Joint Commission.

THE INTERNATIONAL NORTH PACIFIC FISHERIES COMMISSION, composed of four members each from Canada, the United States and Japan, operates to fulfil the terms of the International Convention for the High Seas Fisheries of the North Pacific Ocean, the objective of which is to achieve maximum sustained yield in non-territorial waters by co-ordination of the studies necessary to determine appropriate application of treaty principles. THE GREAT LAKES FISHERIES COMMISSION, composed of two national sections of three members each, formulates and co-ordinates research programs and recommends programs for the eradication or control of sea lamprey populations. Responsibility for Canada's treaty obligations is shared by arrangement between the Federal Government and the Government of Ontario. THE NORTHWEST ATLANTIC FISHERIES COMMISSION operates under the International Convention for the Northwest Atlantic Fisheries signed by Canada, the United States, the United Kingdom, France, Spain, Denmark, Portugal, Iceland, Norway, Italy, East Germany and the U.S.S.R. All contracting governments are represented on the Commission and panels have been established with jurisdiction over defined areas of particular interest to some signatories. The Commission has no regulatory powers but conducts scientific investigations and recommends measures to maintain stocks of fish. THE NORTH PACIFIC FUR SEALS COMMISSION operates under the Interim Convention on Conservation of North Pacific Fur Seals signed by Canada, the United States, Japan and the U.S.S.R., undertaking research, recommending enforcement measures required to eliminate pelagic sealing on the high seas, and overseeing the apportionment of skins from the Pribilof, Commander and Robben Islands. THE INTERNATIONAL WHALING COMMISSION, composed of representatives of Australia, Brazil, Argentina, France, South Africa, the United States, the United Kingdom, Canada, Norway, New Zealand, Iceland, Japan, Panama, Mexico and Denmark, has power to amend whaling rules and regulations of the International Convention, and to recommend new regulations with respect to the conservation and use of the resource. THE ROOSEVELT-CAMPOBELLO INTERNATIONAL PARK COMMISSION is concerned with the administration and development of the Campobello Island estate of the late Franklin D. Roosevelt as an international park.

## Section 4.—Federal and Federal-Provincial Resource Development Programs

### Water Development

Since 1935, the Prairie Farm Rehabilitation Administration (PFRA) has provided engineering and financial assistance in respect of some 91,000 small dams and dugouts (small artificial ponds for water collection) to supply water for livestock, irrigation and domestic use. In the main, such works serve individual farmers but some serve groups of farmers or communities. The PFRA provides engineering services and usually pays about 50 p.c. of the construction costs, for a total cost of nearly \$24,650,000.

Six minor irrigation projects in Saskatchewan and one larger one in Alberta provide water for 160,000 acres of land, with benefits to about 1,000 farmers. Major irrigation projects include the St. Mary Irrigation Project, jointly undertaken by the Federal Government and the Government of Alberta in 1946. The St. Mary Dam, completed in 1951, impounds water from the Belly and Waterton Rivers, providing sufficient water to irrigate approximately half a million acres. The South Saskatchewan River Development Project now under construction involves building of a main dam 210 feet high and 16,700 feet long—the largest rolled-earth dam in Canada and one of the largest in the world. Located between the towns of Outlook and Elbow, this dam will create a reservoir 140 miles long with a total capacity of 8,000,000 acre feet of water (usable storage of 2,700,000 acre feet). The project will provide water to irrigate 500,000 acres of land, the power potential is 475,000 kilowatts, and the artificial lake will have considerable recreational potential. A second, smaller dam adjacent to the height of land between the South Saskatchewan and Qu'Appelle Rivers will divert water into the Qu'Appelle-Assiniboine system to provide much-needed water supplies for irrigation and the considerable urban areas of the watershed. The cost of developing the main reservoir is \$100,000,000, of which the provincial government is contributing \$25,000,000. By the spring of 1966, construction of the two dams was nearly completed and Federal Government expenditures amounted to \$101,000,000 for construction costs alone.

Land reclamation projects have been carried out by the PFRA in Manitoba along the Assiniboine River between Portage la Prairie and Headingley, at various points in the Interlake Region, and along the Northwest Escarpment. The Assiniboine River project includes creation of a large reservoir near Shellmouth and construction of a diversion canal near Portage la Prairie to carry floodwaters to Lake Manitoba. Construction of the main dam began in 1964.

Smaller irrigation and water-supply projects assisted by PFRA number 4,989; most of them serve individual farmers but a number serve adjacent farms or small communities and 60 of them provide substantial water supplies for various uses. Since the inception of the program, some \$8,213,000 has been spent by PFRA on such projects.

Under the provisions of the Atlantic Development Board Act of 1962, amended in 1963, a \$100,000,000 Atlantic Development Fund was established to support projects which would contribute to the growth and development of the economy of the Atlantic region. Among the projects initiated during the Board's first three years of operation were a number relative to water use for power production and for industry, the most notable being a \$20,000,000 grant toward the \$113,000,000, 600,000-kilowatt Mactaquac dam in New Brunswick and a similar grant toward Newfoundland's \$60,000,000, 224,000-kilowatt Bay d'Espoir hydro-electric project. The Board also assisted in developing water supplies to meet the needs of industries—mainly fish-packing plants—in some 30 communities, and committed \$2,000,000 toward abatement of industrial pollution in inland waters of the region.

The program under the Agricultural Rehabilitation and Development Act (ARDA) included, during the first three years of the program to Mar. 31, 1965, some 207 soil and water conservation projects for which the Federal Government shared the costs to the extent of \$12,394,000; the projects consist mainly of drainage and dyking of potentially arable land.

Under the Water Conservation Assistance Act of 1953, which enables federal participation up to 37½ p.c. of the cost of dams and other major water projects, three water conservation programs have been initiated in Ontario—the Ausable River, Upper Thames and Metropolitan Toronto and Region. The over-all cost is estimated at \$34,500,000, of which the Federal Government is committed to pay \$13,000,000.

Other federal agencies and programs (federal and federal-provincial) concerned with water are: the Fraser River Board, which carries out research in co-operation with British Columbia on flood control, hydro-power development and the like; the Prairie Provinces Water Board, comprised of one member from each of the Prairie Provinces and two from the Federal Government to recommend on allocation of water from interprovincial streams; the Nelson River Investigation, established in 1963 to study power sites on the river and make recommendations for their development; the Nelson River Programming Board and Administrative Committee; the Greater Winnipeg Floodway Program to construct a floodway past Winnipeg at a total cost of \$63,000,000 of which the Federal Government will contribute \$37,000,000; the Ottawa River Engineering Board, a joint Ontario, Quebec and federal organization for hydrologic study of the river; and a considerable number of varied hydrologic and water quality studies conducted by the Department of Fisheries, the Canada Department of Agriculture, the Department of National Health and Welfare, the National Research Council, the Department of Transport, the Department of Energy, Mines and Resources, the Department of Forestry and Rural Development and several other agencies.

### **Lands, Forests and Wildlife**

The Prairie Farm Rehabilitation Act of 1935 provided for rehabilitation of areas subject to drought and wind erosion in the Prairie Provinces and in 1937 was amended to broaden its scope to include land utilization and resettlement. In the main, the PFRA's land use programs have involved the establishment of community pastures on land submarginal for cereal crop production, and over the years this program has resulted in the establishment of 84 community pastures with a total acreage of 2,325,000 at a total cost of \$9,274,000. The PFRA also operates tree nurseries at Indian Head and Sutherland in Saskatchewan, which distributed more than 10,000,000 trees to farmers during 1965-66.

The Agricultural Rehabilitation and Development Act, proclaimed in 1961, arose out of recognition of a national interest in achieving better land use, improving the viability of farm units at present uneconomic, and of improving employment and income opportunities in rural areas. In many areas of Canada, income is unacceptably low and land use faulty or inefficient. To some considerable degree these economic, social and conservation problems have been caused by farm mechanization which places smaller, less-mechanized farmers at a disadvantage; a notable symptom of this is the decrease in the number of farms in Canada from about three quarters of a million in 1931 to less than half a million at present—a trend that is continuing.

The Act, amended in 1966 as the Agricultural and Rural Development Act and supplemented by the Fund for Rural Development Act of 1966, is enabling legislation intended to be complementary and supplementary to existing federal and provincial legislation in respect of renewable resources and rural social and economic development; to aid in correlation and expansion of existing programs; and to fill gaps. As such it has considerable potential as an instrument for programs of alternate land use, soil and water conservation, development of rural income and employment opportunities, and for research. ARDA is a federal-provincial program which operated from its inception to Mar. 31, 1965 under a federal-provincial General Agreement, and after that time under the Rural Development Agreement covering the period 1965-70. Under the General Agreement, ARDA-approved projects involving a federal share totalling \$34,517,000, of which \$13,484,000 was expended during the period. The federal share is usually in the order of 50 p.c. of total cost. The Rural Development Agreement provides for the expenditure of \$175,000,000 during the

1965-70 period, \$50,000,000 of which may be used to finance major projects in special rural development areas. During 1965-66, the Federal Government had committed \$18,427,000 to 332 projects.

The Canada Land Inventory being co-ordinated by the ARDA Administration has been made possible by extensive soil classification work in Canada over the past half-century. The co-operative Soil Surveys, which have been under way since 1935, are staffed by soil specialists of federal and provincial governments and universities and are supported by all senior governments. The Soil Surveys have mapped most of the agricultural land of Canada, classifying soils according to their inherent characteristics. The Geographical Branch of the now Department of Energy, Mines and Resources has conducted a second type of land classification according to present use, and various agencies, both federal and provincial, have provided information on the social and economic factors of land use. The Canada Land Inventory carries out a third type of land classification—according to its assessed capability for different uses, i.e., agriculture, forestry, recreation and wildlife, in and adjacent to the settled portions of Canada. Lands are being classified according to physical capability, present use, and socio-economic factors relative to their present use. The vast amount of information obtained will be stored on computer tapes, analysed and published in map or other form in such a way that the Inventory will become a working tool in resource use and rural development programs throughout Canada. Approximately 100 agencies of the 11 senior governments are involved in the Inventory, as well as numerous universities, non-government organizations and private companies or individuals. By late 1966, the agriculture and forestry phases of the Inventory had been nearly completed and substantial progress had been achieved in the wildlife and recreation phases.

In addition, other federal agencies and federal and federal-provincial programs are concerned with land and land-based resources. The Department of Indian Affairs and Northern Development engages in such diverse activities as the administration of National Parks, the administration of the resources of the Yukon and Northwest Territories and the administration of wildlife, including a considerable research program relative to wildlife and the administration of the Migratory Birds Convention Act. Among the programs are the Wildlife Inventory Program in which joint studies are carried out informally, e.g., the waterfowl inventory conducted by the Federal Government, the United States Fish and Wildlife Service, Newfoundland and the five westernmost provinces; the caribou inventory by the Federal Government and the Governments of Alberta, Saskatchewan, Manitoba, Quebec and Newfoundland; the Trans-Canada Highway Compounds and Picnic Areas Program established in 1958 without Ontario and Quebec; a significant program of acquisition of wetlands waterfowl habitat areas; and Fur Conservation Agreements between the Federal Government and Ontario, Manitoba and Saskatchewan for the construction of water control works, mainly to improve muskrat and migratory bird habitat. The Roads to Resources program, carried out under agreements with the provinces made between 1958 and 1960, is a substantial federal-provincial program involving construction of access roads in Canada's "pioneer fringe". The Department of Forestry and Rural Development administers the Composite Forest Agreements which involve an annual allotment by the Federal Government of \$7,910,000 for purposes of inventory, fire protection, access roads and trails, and forest stand improvement. Forest products research, a joint federal-provincial-industry program of spraying to control budworm infestation of spruce forests in New Brunswick, and various other programs of research and forest stand improvement are in effect.

Notwithstanding the magnitude of these federal and federal-provincial programs, and the large number of federal agencies concerned with resource use and development in Canada, it should be noted that the provincial governments assume a role which, in total, is many times larger than that of the Federal Government.

*The interpretation of the symbols used in the tables throughout the Year Book will be found on p. viii of this volume.*

Agriculture has been and continues to be a most important part of the Canadian economy. Farm cash receipts for agricultural production in 1965 reached a total of \$3,804,000,000 but this value of primary farm production gives only a partial view of the importance of the industry. To this must be added the processing, the transportation and the myriad other allied groups that are involved in the movement and transformation of the raw product of the farm into food for Canada and for the world. Despite the fact that only about 10 p.c. of the present Canadian work force is engaged in agricultural pursuits, compared with about 25 p.c. in the mid-1940s, agricultural production has, in the same period, increased by about 40 p.c. The primary producer, the farmer, has become more efficient, producing more food with less help, and the processing industry has paralleled that increase in efficiency.

It may be said that the dominant trends in Canadian agriculture since the end of World War II have been the marked reduction in the number of farms and in the farm labour force, accompanied by increases in capital investment, in specialization, in mechanization and in output. These trends have not yet run their course so that adjustment is constantly taking place in the structural organization of agriculture at the farm level. In addition, important developments have occurred in the marketing, processing and handling of farm products and in the response of industry to serve agriculture with the necessary machinery and production supplies.

Although a great many farms have been transformed into extensive, modern, efficiently operated units, there are still large numbers that have not made this adjustment. The returns from agricultural output on these old-type farms are small and their operators often find it necessary to seek part-time employment in off-farm activities. Even on farms where adjustments have been made to larger acreages or more capital input, there is a great disparity in revenue between the smaller and larger farms. Increased productivity for the group as a whole barely meets the increased costs of modern farming. Prices of farm products generally have not risen as fast as the costs of the goods and services that farmers purchase. The impetus on the part of farmers is to continue to increase efficiency and to exert as much influence as possible in effecting higher returns for their products.

Farmer groups have entered extensively into the marketing and processing of farm products, either through the formation of co-operatives or of marketing boards. Aided by government legislation, producer marketing boards have been established for many products with the avowed purpose of stabilizing prices. Direct government aids are also available through price stabilization legislation, crop insurance and farm credit policies. Thus the role of governments and of farmer-controlled companies in the marketing of farm products is expanding year by year. On the other hand, private industry still holds and likely will continue to hold an important place in the processing and marketing field. Geographical shifts in production have required the construction of new plants, especially for livestock slaughter, and in recent years a number of new plants have been built for the processing of fruit and vegetable crops. Progressive trends in agriculture have also had the effect of increasing demand for many industrially produced commodities and services such as machinery, electricity, fertilizers, antibiotics, pesticides and so on, farmer expenditures for which have been increasing at a rapid rate in recent years.

Although improvements in farm practices have certainly resulted in greater agricultural productivity in recent years and will continue to do so, it must not be forgotten that weather is still a dominant factor in agricultural output and can cause considerable variation from year to year in the over-all farming picture or in the output of certain localities or of certain crops. In 1966 the weather was particularly favourable for crop production with the result that the index of field crop output (1949=100) rose to 204.1, the highest level ever reached.

## Section 1.—Federal Government in Relation to Agriculture\*

The Canada Department of Agriculture dates from Confederation. It was established in 1867 as an outgrowth of a Bureau of Agriculture set up in 1852 by an Act of the Legislature of the Province of Canada. The Department derives its authority from the British North America Act, 1867, which states in part that "in each province, the legislature may make laws in relation to agriculture in the province" and that "the Parliament of Canada may from time to time make laws in relation to agriculture in all or any of the provinces; and any law of the legislature of a province relative to agriculture, shall have effect in and for the province as long and as far as it is not repugnant to any Act of the Parliament of Canada".

A Department of Agriculture with a Minister of Agriculture at its head was accordingly established as part of the Government of Canada. Departments of Agriculture headed by provincial Ministers of Agriculture were also set up by the provincial governments, except in the Province of Newfoundland where agricultural affairs are dealt with by the Agricultural Division of the Department of Mines, Agriculture and Resources. The agricultural affairs of the Yukon and Northwest Territories are administered for the Federal Government by the Department of Indian Affairs and Northern Development.

### Subsection 1.—Services of the Canada Department of Agriculture

The activities of the Canada Department of Agriculture (CDA) fall into three broad groups: research, promotional and regulatory services, and assistance programs. Research work is aimed at the solution of practical farm problems through the application of fundamental scientific research to all aspects of soil management and crop and animal production. Promotional and regulatory services are directed toward the prevention or eradication of crop and livestock pests and the registration of chemicals and other materials used to achieve that end and toward the inspection and grading of agricultural products and the establishment of sound policies for crop and livestock improvement. Assistance programs cover some of the sphere of soil and water conservation, price stability, provision of credit, rural rehabilitation and development, and crop insurance and income security in the event of crop failure.

\* Prepared (July 1966) under the direction of S. C. Barry, Deputy Minister of Agriculture, Ottawa.

The Department has four main Branches—Research, Health of Animals, Economics, and Production and Marketing—and its organization includes a number of smaller units—the Agricultural Stabilization Board (see p. 457), the Agricultural Products Board, the Prairie Farm Rehabilitation Administration (p. 445), Crop Insurance (p. 458), the Information Division and Departmental Administration. Agencies closely allied with the Department and responsible to the Minister of Agriculture are the Farm Credit Corporation (p. 460) and the Board of Grain Commissioners (see Part II of Chapter XXI).

**Research Branch.**—The research activities of the Department are undertaken mainly by the Research Branch at some 60 centres across the country, although important contributions are also made by the Economics Branch (p. 452), the Health of Animals Branch (p. 451) and the Grain Research Laboratory operated by the Board of Grain Commissioners for Canada (p. 451). About 1,000 research workers are employed by the Department and their specialties run the gamut of scientific agriculture from genetics to engineering. Most of the research is directed from Research Branch executive headquarters at the Central Experimental Farm in Ottawa. Also located there are the statistical, engineering and analytical chemistry research services, together with six of the eight institutes for research on animals, food, entomology, microbiology, plants, soils, biological control and pesticides. Throughout the ten provinces there are 13 research stations, 27 experimental farms, a laboratory and a number of substations.

Originally, the main task of the experimental farms was to determine the potential of the various combinations of soil and climate for producing crops and maintaining livestock, and to develop and test varieties, breeds and management practices suitable for each area. Today's federal research program continues with this early work but is designed to meet the specific needs of domestic and export markets. The accent is on promoting greater efficiency in production and diversification of cropping practices.

Canada's main crop for generations has been wheat, the efficient production of which stems directly from the help the grain growers have received from research. Without the new varieties produced by plant breeding, it would be unprofitable to grow wheat on large areas of the wheat belt. Comparable improvements in oats and barley have enabled the farmer to continue to grow these valuable cereals despite the incidence of pests and diseases, drought and short growing seasons. Research has also augmented livestock returns to farm incomes by developing better grasses and legumes adapted to the various regions of Canada that differ in climatic and soil conditions. Research in other crops, notably oil seed plants and potatoes, has resulted in new varieties with resistance to diseases, with improved quality and suitability for specific processing, and adapted to the different growing areas. More than 80 new varieties of crops have been developed and put into commercial production in the past five or six years. It may be added that research into the storage and processing of crops has been recently accelerated and has led to valuable innovations in the fruit and vegetable industries and in the protection of stored grain.

In livestock, the main lines of progress are through genetics and nutrition and the main subjects are dairy and beef cattle, pigs, poultry and sheep. The advantages of selective breeding have been evidenced through the records of animals tested for many years (see pp. 453-457). The CDA developed a new breed of hog, the Lacombe, which is proving a worthy addition to the old-time breeds. Romnelet, a range-type sheep, was also an outcome of federal breeding programs. Crosses of several meat-type strains of chickens made at federal institutions have led to performance superior to that of pure strains. Extensive studies on the causes and control of diseases and parasites of livestock, fur bearing animals and wildlife are carried on with the result that epidemic outbreaks rarely occur and when they do are quickly suppressed. Live animals and meats must attain the high standards required in the export trade.

A matter of constant concern is the protection of crops from diseases and pests. Chemicals have proved to be potent weapons but there is also a continuing search for other control methods. Many weeds can be eradicated by proper tillage and cropping methods

and a few have been controlled by insects that feed on them exclusively and destroy them. Fungus diseases may be checked by developing resistant varieties of crops. In biological control, parasites or predators are produced and released to prey on certain insects and eliminate them. Sterilization of male insects by radiation or chemical means is another method used to reduce insects of various kinds.

An area of special interest is that of farm mechanization in which there has been tremendous development in the past 60 years. The Research Branch is expanding its studies in this field at the Engineering Research Service in Ottawa and in the Maritime Provinces, and universities are being encouraged to study the subject more intensively.

Soil surveys are conducted in all provinces in co-operation with provincial departments of agriculture and the universities. Soils are examined and classified as to their chemical and physical characteristics and potential productivity. The resulting information is of inestimable value in setting up land uses under the ARDA program administered by the Department of Forestry and Rural Development (see pp. 445-446). Soil fertility is under study at all experimental farms and at many research stations and is undertaken in close co-operation with the universities. Agrometeorology, a relatively new discipline, is opening new opportunities to growers to make the most use of the heat, light and moisture available in each farm area.

Although most agricultural research is carried out by the CDA, important programs are also undertaken by the provincial governments and agricultural colleges. Close liaison exists between these different agencies to avoid duplication and to ensure that the services offered by the Federal Government through provincial extension officers is of the kind needed by farmers. Federal research establishments across the country are represented on provincial committees concerned with field crop varieties, fertilizer practices, soil fertility, spray programs, field crop and animal management, and horticulture. Such collaboration ensures that new practices discovered by research are brought quickly to the attention of extension groups to recommend for local use.

**The Grain Research Laboratory.**—This Laboratory provides scientific services required in the administration of the Canada Grain Act. It carries out annual studies of the quality of the new crop cereals, maintains a continuous check of the quality of cereal grains as they move forward from the farm to marketing positions and plays a major role in testing (prior to licensing) the quality of plant breeders' varieties of various cereals. A comprehensive program of basic and applied research relating to the quality of Canadian cereal grains is an important task of the Laboratory.

**Health of Animals Branch.**—This Branch administers the Animal Contagious Diseases Act, the Meat Inspection Act and the Humane Slaughter of Food Animals Act, and operates laboratories for the study of animal diseases. Contagious diseases of animals are controlled through preventive measures of inspection and quarantine of imported livestock and restricted commodities such as meat, farm products and other possible sources of infection; through conducting disease eradication programs, notably of bovine tuberculosis, brucellosis and Johne's disease; through the control and eradication of serious animal diseases when outbreaks occur; and through inspection and certification as to health of livestock for export. The Animal Pathology Division consists of the Animal Diseases Research Institute at Hull, Que., the Animal Diseases Research Institute (Western) at Lethbridge, Alta., and seven branch laboratories; these establishments conduct research and investigations on infectious diseases of animals and produce the biological products required in their control. The Division also provides diagnostic services for diseases of domestic and wild animals and conducts a training program for departmental officers and veterinarians from other lands. The Meat Inspection Division conducts ante-mortem and continuous post-mortem examination of animals slaughtered at packing plants that market their meat products outside of the province in which they operate, ensures maintenance of sanitary standards during processing of the products, accurate labelling and proper kind and use of ingredients and preservatives; it ensures also that, in these plants, the animals are slaughtered in a humane manner.

**Economics Branch.**—This Branch collects, analyses and interprets economic information needed to formulate and administer departmental programs and policies and does intelligence and research work designed to increase efficiency in agricultural production and marketing and to guide farmers in making needed adjustments in farm organization and operation. It acts as an economic and statistical research agency for the Agricultural Stabilization Board, the Prairie Farm Rehabilitation Administration and other bodies, and assists in any economic undertakings with which the Department is concerned. The Branch is also closely associated with the work of the Food and Agriculture Organization of the United Nations, the UN/FAO World Food Program, the General Agreement on Tariffs and Trade, and the Directorate of Agriculture of the Organization for Economic Co-operation and Development.

**Production and Marketing Branch.**—The Production and Marketing Branch conducts many of the promotional and regulatory functions of the Department. Six specialized divisions administer legislation and policies in the production and marketing of livestock, poultry, fruits and vegetables, dairy products and plant products, and policies in connection with the control of disease in plants. A General Service Division supplements and complements the specialized divisions in matters of common concern.

The *Livestock Division* (see also pp. 453-457) administers legislation dealing with the grading of meat, wool and fur, with the registration of livestock pedigrees, with performance testing of cattle and hogs and with the supervision of racetrack betting. Other activities include the promotion of livestock improvement and the compilation of market statistics. The *Poultry Division* carries out the policies of the national poultry breeding program, including Record of Performance for poultry and hatchery inspection, and administers the regulations for the grading of poultry products. The *Fruit and Vegetable Division* administers legislation having to do with the grading of fruits and vegetables in both fresh and processed form, maple products and honey. The Division is responsible for the licensing of interprovincial and international dealers and brokers who deal in fresh fruits and vegetables. The *Dairy Products Division* administers the Cheese Factory Improvement Act and legislation covering grades and standards for dairy products, including butter, cheese, concentrated milk products and ice cream. The *Plant Products Division* administers Acts and regulations respecting seeds, feedstuffs, fertilizers and pest-control products, conducts field inspections and maintains regional testing laboratories. The *Plant Protection Division* is responsible, under the Destructive Insect and Pest Act, for safeguarding against the introduction of serious plant insects or diseases into Canada or their spread in Canada, for certifying freedom from disease and pests in plant exports, and for seed potato certification.

The *General Service Division* maintains inspectors in the principal marketing areas to make spot checks on retail outlets to see that food products meet prescribed standards of quality and grade; maintains cargo inspectors at the main Canadian ports to check the handling of goods moving to export markets; administers the payment of subsidies for the construction of public cold storage facilities; compiles and distributes market information; and co-operates with the commodity divisions in developing markets for Canadian foods and in interpreting the grading and inspection regulations to the public.

**Information Division and Departmental Administration.**—The Information Division gathers and publishes information arising from research work and the development of regulatory programs of the Department. Publication is through the printed word, press and radio releases, motion pictures, television and exhibits. The general business management of the Department is undertaken by the Departmental Administration, the duties of which also embrace Emergency Measures Planning and the Departmental Library; the main emphasis of the Library's collection is, of course, on agriculture but extends also to the life sciences.

## FEDERAL ASSISTANCE IN LIVESTOCK IMPROVEMENT

The Canada Department of Agriculture (CDA) has always assisted the livestock industry in its attempts to reach a high level of efficient production with top-quality animals. Programs designed and carried out with this aim concern mainly the food animals—beef and dairy cattle, swine and sheep.

Canada has a large population of purebred cattle, swine and sheep. The general object of any improvement program is to identify bloodlines that will be most suitable to up-grade the commercial herds. In the case of meat animals, this means identifying the kind of breeding stock that will produce market animals with the minimum output of time and feed; in the case of dairy cows, yield of milk is, of course, the criterion; and in sheep, the products are spring lamb and wool. To these ends the industry relies mainly on the Livestock Pedigree Act, Record of Performance (ROP), grading of carcasses and competition through agricultural fairs, in all of which the Federal Government is deeply involved.

### Livestock Pedigree Act

The Livestock Pedigree Act (RSC 1952, c. 168) provides for CDA supervision of the affairs of the breed associations registering livestock in Canada. The conditions of registration are carried out by the independently operated breed associations with the Government verifying the certificates containing the pertinent data of ancestry and ownership. A registration certificate in Canada, therefore, has the status of a legal document.

The Canadian National Live Stock Records (CNLSR) is not a government office. It is a non-profit, record-processing organization, carrying out the instructions of the affiliated breed associations on all matters pertaining to registration of purebred livestock. The Department of Agriculture must approve amendments to the constitutions and by-laws of the national breed associations, and registration certificates issued by the CNLSR. There are 31 affiliated breed associations in the CNLSR and four associations incorporated under the Act which carry on their own recording activities. In 1965, membership in the 38 associations (three administered by the Record Board) was 42,178; registrations numbered 279,910 and transfers 207,867.

The registration of purebred livestock in Canada is an industry in its own right. The recognition given to Canadian livestock pedigrees throughout the world is a tribute to the success of the co-operative effort of Government and breed associations in providing authenticated pedigree certificates.

### Record of Performance Programs

**Dairy Cattle.**—ROP programs for dairy cattle were initiated in 1905 and have kept abreast of changes in dairy production techniques to provide the services and leadership required in the industry. ROP is now an integral part of dairy cattle production and has enhanced the stature of Canadian breeding stock in world trade. ROP records are the only dairy testing records officially recognized by the breed associations, and constitute the production requirements for registration of male calves in three of the four major dairy breeds.

Some 4,000 breeders are enrolled in the program and test in the neighbourhood of 110,000 cows each year. Although this is only  $3\frac{1}{2}$  p.c. of Canada's total dairy cow population, it constitutes basic seed stock testing adequate to provide the nucleus for the national purebred dairy herd, which in turn is the nucleus on which the commercial dairy cattle population is built. Because artificial insemination of cows is widely practised in Canada, breeding to ROP-tested stock is available to all farmers. At present, 60 p.c. of all dairy calves registered were sired by purebred bulls at Artificial Insemination (AI) stations. Dairy bull semen was used to inseminate 607,000 cows in 1964 and it was estimated that approximately 20 p.c. of the national cow population was AI-bred in 1965.

The AI stud is a seed reservoir which has a vital bearing on the growth in quality of the commercial herds because it contains proven bloodlines of many breeds. For this reason dairy sire appraisals, instituted as an adjunct to ROP and sire reports, have become an essential part of dairy ROP. Sire appraisal is based on contemporary comparisons and a bull is rated only when he has a minimum of 20 effective daughters to his credit. These reports on sires are of considerable significance to both the AI industry and to the breed associations. They rate bulls of each breed on the average performance of their daughters compared with the performance of contemporary cows in the same herd but from other sires. The identification of plus-producing and minus-producing sires from these ratings permits identification of the superior and inferior sires.

**Beef Cattle.**—Although the ROP program for beef cattle has been in effect for only ten years, it has already proved to be a sound means of identifying the performance traits of greatest economic importance to the beef industry. Beef cattle testing is carried out as a joint federal-provincial program with the guidance and co-ordination of the Livestock Division of the Department of Agriculture's Production and Marketing Branch. Performance testing seeks to measure the ability of breeding stock to perform in all traits of basic economic importance; in the case of beef cattle this includes reproduction efficiency, longevity, gainability, feed efficiency and carcass value.

Testing is carried out at three levels: the federal-provincial ROP herd test program; the station testing of individual bulls and sire progeny groups of bulls; and the beef sire progeny testing through the performance test and carcass appraisal of steers. The second and third levels come under the recently established Canadian Beef Cattle Test Station policy.

The basic objective of the *herd test program* is to identify those sires and dams that have a high rate of reproductive efficiency, and progeny that demonstrate above-average ability to make rapid and economic gains. In this manner, future herd sires and replacement females are positively identified as well as the dams and sires that should be removed from the herd. In the 1965-66 test year, approximately 10,500 calves were tested in 330 herds representing all but two provinces, the number being approximately 11 p.c. of all beef calves registered in 1965; this record may be compared with that of 1956 when a total of 341 calves from 15 herds in three provinces were tested. The federal Livestock Division co-ordinates the program and compiles and issues the results. The provincial governments provide the extension and supervision required to operate the program within each province. Ontario operates its own provincial herd testing program.

The second year of *beef bull station testing* under the ROP policy was completed in 1966 with 700 bulls passing through stations in Alberta, Saskatchewan and Manitoba. Ontario operates its own testing program but the federal Livestock Division co-ordinates and reports the operations of all stations for the information and use of the industry. This form of testing supplements and complements the ROP test carried on within breeders' herds and gives a contemporary comparison of individual bulls or sire progeny groups of at least five bulls tested under uniform conditions.

*Beef sire progeny testing* through performance and carcass appraisal requires ten steer progeny and is designed for use by breeders participating in the ROP herd test. The test has been mainly used in the appraisal of sires for AI batteries. Since 1959 over 100 sires in AI studs have been tested through this program. Such testing represents the ultimate currently available in the assessment of beef cattle performance traits. It is by far the most expensive form of testing and therefore needs to reflect the activities carried out in the less expensive procedures of herd testing and station testing of bulls. A great deal can still be done through the progeny test to appraise the value of sires in breeders' herds in comparison with those in use at the AI centres. Beef sire progeny testing is at present carried out only in British Columbia and Alberta.

The progressive livestock farmer who applies these proved testing procedures assures himself of a larger income and the nation of a higher beef and milk productivity.

**Swine.**—The ROP program for swine began in 1928 as "The Advanced Registry for Swine" in line with the hog-grading activities initiated in 1922. Over the years, the swine-testing program was modified to retain a practical approach to the situation as it changed within the industry. In 1957 the Advanced Registry Board, under which it operated, was dissolved and the Department of Agriculture took on the function of operating the policy as ROP for swine. At the same time home testing (testing at the premises of the breeder) was reinstituted in an endeavour to accelerate testing activity. As a result, swine testing increased annually and in 1965 a 5-p.c. increase over the previous year was registered when 355 breeders tested 1,519 groups of four pigs, as required in the ROP test.

The most recent significant change was a revision applicable to pigs born after Jan. 1, 1965 which altered both the measurements used to assess the carcass and the terms in which carcass merit was reported. The new carcass appraisal included, for the first time, assessment of the ham muscling and excluded, for the first time, assessment of the belly bacon. Reports issued on groups tested prior to 1965 were made in terms of a score calculated from specific measurements taken on the carcass. The new method entails a prediction of the lean content of the four major wholesale cuts from the hog as a means of estimating the salable content of trimmed carcass. Pre-1965 test results were based on maximum scores being provided for intermediate rather than maximum measurements. As a result, optimum carcass scores were given for intermediate measurements since no credit was provided for measurements in excess of that receiving the maximum point score. Under the new system, full credit is given for the actual measurements taken which are included in the calculation of percentage yield of trimmed cuts, thus permitting the assessment of swine carcasses relative to their merit in the meat trade.

A new system of reporting tests has been developed to provide current results to breeders more promptly. Weekly reports go forward to all ROP breeders giving test results across the country. An abbreviated report on the top-performing 15-20 p.c. of the matings tested each week is provided to the industry through the *Livestock and Meat Trade Report* and press channels; it includes an index combining the assessment for yield of trimmed cuts and the maturity of the test group.

The ROP program for swine has been adopted as the basis for the establishment of Elite Herd Policies within the provinces. This development has been fostered by the Canadian Federation of Agriculture through swine conferences held in 1964 and 1965, and represents a tangible use of ROP for swine improvement on a herd basis.

**Investigation and Study of New Developments.**—In the field of dairy cattle production, activity in recent years has been directed to the development of a practical field system of testing for solids-not-fat in milk. The Livestock Division maintained a joint operation with the Ontario Agricultural College to assess the feasibility of routinely testing milk for all constituents. Various methods were tried over a five-year period, one of which—an automated method adaptable to electronic data processing (infra-red milk analysis)—was found to be highly successful, although detailed results are not yet available.

The sire appraisal work for dairy bulls in AI centres began as a pilot project but now constitutes a major part of ROP. Beef bull progeny testing also began as a pilot project, as did the station testing of beef bulls. Now both these facets of beef testing are specific functions within the ROP operation. A pilot project to assess the validity of testing sires through veal calves is under way. A pilot project to determine the feasibility of operating a bull test station in the Maritime Provinces is also being investigated.

In swine production, investigations have been made into the merit of specified cross-breeding practices on a large scale. In trials, three-way crossbred pigs were found to produce 26 p.c. more pounds of carcass at 180 days of age than did purebreds. The 26 p.c. was the combined difference in pounds due to larger litters, better livability, and faster growth. In addition, the percentage of Grade A pigs was higher among the crossbreds

than among purebreds. A pilot project of "back fat probing" as a supplementary means of assessing hog quality is under development. These projects are carried on in two ways—either on initiation of the Livestock Division or in co-operation with provincial committees dealing with a particular phase of livestock production.

Investigations have been carried on in co-operation with the Demonstration Farm Service of the Ontario Department of Agriculture with respect to the feasibility of establishing an ROP program for sheep. At present the major activity in the field of sheep promotion and improvement is the financial assistance provided in the movement of commercial ewes and ewe lambs to areas where there is a lack of sheep for breeding purposes. Lamb and wool production in Canada have declined steadily but CDA continues its efforts to promote development of the industry. Canada would need 9,000,000 sheep to eliminate wool imports but the national flock in 1966 numbered just over 1,000,000.

### **Livestock Grading**

Hog grading came into effect in Canada in 1922, beef carcass grading in 1929 and carcass grade standards for lamb and veal carcasses in subsequent years. In 1958, after consultation with the industry, regulations covering grades for beef and veal, hogs, lamb and mutton were written into the Canada Agricultural Products Standards Act. The new standards were more specific and permitted greater uniformity of application. To maintain this uniformity, Livestock Division staff constantly check grades at the national, regional and local levels in 79 inspected and 77 approved packing plants operating throughout the country.

The Federal Government began paying hog quality premiums in 1944—\$2 for a Grade A and \$1 for a Grade B carcass. In 1963, the premium to producers was changed to \$3 for Grade A and the premium for Grade B was removed. The lamb premium policy was begun in 1961 with \$2 for Choice and \$1 for Good carcasses weighing 36-51 lb. Since 1962, premiums have also been paid for Choice and Good carcasses of 52-56 lb. warm dressed weight.

Grading classifies units of a commodity into groups according to established and generally accepted criteria, thereby providing an efficient basis for the pricing and marketing of carcasses of different quality levels. Grading is utilized by the producer as a basis of sale, by the packer as a guide in buying and selling, and by the retailer in providing for his customers a uniform supply of the type and quality of meats desired. At the retail level grading is concerned with quality, condition and packaging. Grading provides the necessary vehicle by which consumer preferences are transmitted back to the producer, it facilitates trading between buyers and sellers and it provides a standard by which consumers are assisted in selecting the quality most desired. Because better grades bring better prices, grading is both a guide and an incentive in the improvement of livestock.

### **Fairs and Exhibitions**

The Federal Government has been making grants to fairs and exhibitions since 1903. Twelve Dominion exhibitions held between 1902 and 1914 received grants totalling \$658,000 through that period. In 1915 it was decided to help all of the larger fairs and to provide half of the prize money paid out on utility classes of horses, cattle, sheep, swine and poultry. At a Fairs Conference in 1923 "A" and "B" fair classifications were adopted, one to three "A" fairs being allotted to each province. The grant to "A" fairs was \$5,000 and to "B" fairs, \$1,500. Grants for junior activities and of judging fees were added in 1936. From 1912 to 1940, there were 101 fairs held in 92 districts of the then nine provinces.

After World War II, the Department made available building agreements and grants covering one third of the cost of construction, the annual grant being limited to \$10,000 and the total to \$100,000. In the past 15 years, the Department has paid \$7,000,000 in major capital grants, which accounted for about 30 p.c. of the total cost of buildings constructed under this assistance. Exhibition Grants Regulations were amended in 1957 to include grants to agricultural museums.

A major move toward using fair competitions to promote livestock improvements was taken in 1964-65. Prize money was offered for specified livestock classifications drawn up by the Department following discussion with exhibition, provincial government and breed association officials. The plan was to place more emphasis on utility in purebred livestock fair competitions, to reduce the exhibitions' cost of showing, to encourage more breeders to exhibit, and to increase spectator interest. The new classifications sharply reduced the number of classes and exhibitors were generally limited to one entry per class. Utility features introduced included production requirements on dairy cattle entries, proof of productivity such as "cow with calf at foot" in the beef classes, ROP requirements on swine entries, and "ewe with lambs at foot" in the sheep classes. Carcass classes for steers, barrows and lambs carried appraisal through from the live showing at the fair to slaughter and subsequent display of the carcass at the fair. Interbreed classes were held for steers, hogs and sheep and an interbreed "best udder" class was introduced for dairy cows.

Of the 10 winter and spring fairs, 32 class A exhibitions and 100 class B exhibitions held in 1965, 96 adopted the new livestock classifications in whole or in part. It is estimated that 90 p.c. of the listed exhibitions adopted the classifications in whole or in part in 1966.

Grants to fairs, exhibitions and agricultural museums in 1965-66 totalled \$918,340 distributed as follows: permanent improvements, \$211,711; judges' fees, \$36,243; junior activities, \$100,200; special grants, \$123,000; major building grants, \$12,736; and prize money grants to fairs adopting the new livestock classifications, \$433,450.

### Subsection 2.—Farm Assistance Programs

Basic to the concept of Canada's national agricultural policy is the premise that a stable agriculture is in the interests of the national economy and that farmers as a group are entitled to a fair share of the national income. In pursuit of these objectives, the Department of Agriculture has carried on, over a long period, a program designed to aid agriculture through the application of scientific research and the encouragement of improved methods of production and marketing. Over the years, as conditions have warranted, programs have been initiated to deal with special situations such as the Prairie Farm Rehabilitation Act (see p. 445) to deal with the results of the drought in the 1930s; the Prairie Farm Assistance Act (p. 462) to mitigate the effects of crop failure; Feed Grain Assistance Regulations (p. 462) to assist in the movement of western feed grains to Eastern Canada and British Columbia; and the Maritime Marshland Rehabilitation Act (p. 440) to save valuable soil in the Maritime Provinces.

Although much has been accomplished and is still being accomplished by these measures, changes in the past two decades have dictated a new approach to some problems. Large-scale mechanization was the sequel to the reduction of manpower available to farmers; the number of farms declined but the size of farms increased; marketing and income problems took different forms. Legislation enacted to meet these situations include price support (Agricultural Stabilization Act), crop insurance (Crop Insurance Act), resource development (Agricultural and Rural Development Act) and credit facilities (Farm Improvement Loans Act, Prairie Grain Advance Payments Act, Farm Credit Act and Farm Machinery Syndicates Credit Act). These measures, with the exception of the Agricultural and Rural Development Act (see pp. 445-447), are described individually below.

**Agricultural Stabilization Act.**—The Agricultural Stabilization Act (SC 1958, c. 22, proclaimed Mar. 3, 1958) established the Agricultural Stabilization Board and repealed the Agricultural Prices Support Act, 1944. The Board is empowered to stabilize the prices of agricultural products in order to assist the agricultural industry in realizing fair returns for labour and investment, and to maintain a fair relationship between prices received by farmers and the costs of goods and services that they buy.

The Act provides that, for each production year, the Board must support, at not less than 80 p.c. of the previous ten-year average market or base price, the prices of nine commodities (cattle, hogs and sheep; butter, cheese and eggs; and wheat, oats and barley produced outside the prairie areas as defined in the Canadian Wheat Board Act). Other commodities may be supported at such percentage of the base price as may be approved by the Governor in Council. Since the Act came into force, the following farm products, other than the nine named commodities, have been supported at one time or another: honey, potatoes, soybeans, sunflower seeds, sugar beets, tobacco, turkeys, apples, peaches, sour cherries, apricots, raspberries, asparagus, tomatoes, milk for manufacturing and skim milk powder. The Board may stabilize the price of any product by an offer-to-purchase, by a deficiency payment, or by making such payment for the benefit of producers as may be authorized.

In stabilizing prices of certain commodities by means of deficiency payments, the price stabilization program has been assisting the agricultural industry to make production adjustments from a position of excessive supply to one of more normal relationship between supply and demand. The institution of limited deficiency payments by the Board assists in the adjustment of production in a relatively short time. During the period of adjustment, the Board guarantees a minimum average return to producers for a limited quantity of product.

During the seven fiscal years that the Act was in operation prior to Mar. 31, 1965, the cost of stabilization programs averaged \$57,000,000 a year and was little changed in the following fiscal year. The Board has available a revolving fund of \$250,000,000. Losses incurred are made up by Parliamentary appropriations and any surplus is paid back to the Consolidated Revenue Fund. An Advisory Committee named by the Minister of Agriculture and composed of farmers or representatives of farm organizations assists the Board in its operations.

**Crop Insurance Act.**—To assist in making the benefits of insurance protection on crops available in all provinces, the Crop Insurance Act was passed in 1959. This Act does not set up any specific insurance scheme but rather permits the Federal Government to assist the provinces to do so by making direct contributions toward the cost of providing crop insurance. The initiative for establishing schemes to meet their own regional requirements rests with the provinces. Schemes may be organized on the basis of specific crops or areas within the provinces and agreements between the provinces and the Federal Government set out the terms of insurance coverage. By Sept. 12, 1966, crop insurance legislation had been passed by all provinces except Newfoundland and Quebec, and the latter province was preparing similar legislation.

Under the Act and amendments of 1964 and 1966, the Federal Government will pay 50 p.c. of the administrative costs incurred by a province and 25 p.c. of the amount of premiums required to make the scheme actuarially sound. In addition, the Federal Government may make loans to any province equal to 75 p.c. of the amount by which indemnities required to be paid under policies of insurance exceed the aggregate of the premium receipts for that year, the reserve for the payment of indemnities, and \$200,000. As an alternative to such loans, the Federal Government may re-insure a major portion of the provincial risk in a program taken out under the Crop Insurance Act. Farmers insured under the Act are not eligible for payments under the Prairie Farm Assistance Act, nor are they required to pay the 1-p.c. levy on grain sales as provided for under that Act.

In 1965, 13,500 farmers received coverage under the Act for a total of \$26,000,000.

**Farm Improvement Loans Act.**—The Farm Improvement Loans Act (RSC 1952, c. 110), administered by the Department of Finance, is designed to provide credit by way of loans made by the chartered banks to assist in almost every conceivable purchase or project for the improvement or development of a farm and includes the purchase of agricultural implements, the purchase of livestock, the purchase and installation of agricultural equipment or a farm electrical system, the erection or construction of fencing or works for

drainage on a farm, and the construction, repair or alteration of farm buildings including the family dwelling. Credit is provided on security related to the purchase or project and on terms suited to the individual borrower.

The legislation, originally operative for three years (1945-48), has been continuous by way of extensions usually for three-year periods. The latest extension was for the period July 1, 1965 to June 30, 1968. The maximum term of a loan and the interest rate remain at ten years and 5 p.c. simple interest, respectively. The borrower is required to provide from 10 p.c. to 33½ p.c. of the cost of his purchase or project, depending on the loan category to which it belongs. The Federal Government guarantees each bank against loss sustained by it up to an amount equal to 10 p.c. of loans granted by it in a lending period. This guarantee does not apply to any loan made after the aggregate of all loans made by all banks in a given period reaches an amount fixed by statute. The current maximum stands at \$700,000,000. By Dec. 31, 1965, 2,905 claims amounting to \$2,094,404 had been paid under the guarantee since the inception of the Act, representing a net loss ratio of less than one tenth of one per cent after recoveries have been taken into account. The maximum loan or amount which may be outstanding to a borrower at any one time stands at \$15,000.

By the end of 1965, \$1,388,582,471 or 80.3 p.c. of the total loans made had been repaid. The position at that time was as follows:—

Period	Loans Made	Repayments <sup>1</sup>	Balance Outstanding
	\$	\$	\$

**Prairie Grain Advance Payments Act.**—This Act, which came into force on Nov. 25, 1957, provides for an interest-free advance payment to producers for threshed grain (wheat, oats, and barley) in storage other than in an elevator and prior to delivery to the Canadian Wheat Board, exclusive of grain deliverable under a unit quota. Advance payments of 50 cents per bu. of wheat, 20 cents per bu. of oats and 35 cents per bu. of barley are made, subject to certain restrictions as to quota and acreage. Maximum advance payment per application is \$3,000. Repayment is effected by deducting 50 p.c. of the initial payment for all grain delivered subsequent to the loan, other than for grain delivered under a unit quota. The amounts deducted are paid to the Board until the producer has discharged his advance. At July 31, 1966, the position with respect to advances and refunds was as follows:—

<i>Period</i>	<i>Applications</i>	<i>Total Advance</i>	<i>Average Advance</i>	<i>Total Refunded</i>	<i>Percentage Refunded</i>

**Farm Credit Act.**—The Farm Credit Act (SC 1959, c. 43, proclaimed on Oct. 5, 1959) established the Farm Credit Corporation as successor to the Canadian Farm Loan Board established in 1929. The Corporation, which is a Crown agency, reports to Parliament through the Minister of Agriculture.

The Act provides two types of long-term mortgage loans for farmers. Under Part II of the Act the Corporation may lend up to 75 p.c. of the appraised value of the farm land and buildings taken as security, or \$40,000, whichever is the lesser. Under Part III the Corporation may lend 75 p.c. of the appraised value of the farm land and buildings and of the livestock and equipment taken as security, or \$55,000, whichever is the lesser. To qualify for a loan under Part III a farmer must be under 45 years of age and have had at least five years of farming experience. Part III loans are further secured by mandatory insurance on the life of the borrower, and his farming operations are subject to supervision by the Corporation until the loan is reduced to 75 p.c. of the appraised value of the farm land and buildings. Similar life insurance and supervision are available on an optional basis to borrowers under Part II.

The interest rate on the first \$20,000 borrowed under Part II or the first \$27,500 under Part III is set by statute at 5 p.c. On that part of the loan which exceeds these amounts the interest rate is set by the Corporation with the approval of the Governor in Council. This rate can vary according to the interest rate on money borrowed by the Corporation, the operating costs of the Corporation and the allowance made for reserves against capital losses. The interest rate on the amount of loan under Part II exceeding \$20,000 and the amount under Part III exceeding \$27,500 is, at present, 6½ p.c. All loans are repayable on an amortized basis within a period not exceeding 30 years.

The Corporation has 127 field offices administered by 195 credit advisers who are responsible for informing local farmers about the services available, for pre-loan counselling on credit use, farm planning and farm management, for accepting applications and for making farm appraisals.

In addition to the amounts repaid by borrowers, funds for lending to farmers may be borrowed by the Corporation from the Minister of Finance. The aggregate amount of such borrowings outstanding at any time may not exceed 25 times the capital of the Corporation. This capital was raised by amendment to the Act in 1966 from \$24,000,000 to \$40,000,000. There were 52,932 loans to the amount of \$586,356,486 outstanding as of Mar. 31, 1966.

**Farm Machinery Syndicates Credit Act.**—The Farm Machinery Syndicates Credit Act (SC 1964-65, c. 29, proclaimed Dec. 11, 1964) provides the Farm Credit Corporation with authority to make loans to qualified groups of farmers (referred to as syndicates) to purchase farm machinery to be used co-operatively and primarily on the syndicate members' farms. Under this Act, the Corporation may lend a syndicate up to 80 p.c. of the cost of the machinery to be purchased but loans outstanding to any syndicate may not exceed \$15,000 per member or \$100,000. Funds for this purpose are advanced to the Corporation by the Minister of Finance.

To qualify for a loan a syndicate must have three or more members, all of whom are farming and the majority of whom have farming as their principal occupation. Loans are repayable over a term not exceeding seven years. Security is provided by a promissory note signed by each syndicate member and such other security as may be required.

The interest rate, set by the Corporation with the approval of the Governor in Council, is based on the cost of funds to the Corporation, the expenses in servicing loans and an allowance for a reasonable reserve against losses. The rate was set at 6 p.c. in December 1964. There is an initial service charge of 1 p.c. on the amount of each loan. The Corporation's field staff provide assistance to groups of farmers in making their local arrangements with respect to sharing in the use of the machinery and repayment of the loan. Up to Mar. 31, 1966, the Corporation had approved 136 loans totalling \$988,893.

**Prairie Farm Assistance Act.**—The Prairie Farm Assistance Act, passed in 1939, provides for direct money payments by the Federal Government on an acreage-and-yield basis to farmers in areas of low crop yield in the Prairie Provinces and in the Peace River area of British Columbia. Its purpose is to assist in dealing with a relief problem which the provinces and municipalities cannot do alone and to enable the farmers to put in a crop the following year. Payments for the 1965-66 crop year, as at Mar. 31, 1966, totalled \$4,760,236; payments made under the Act since 1939 amounted to \$357,510,068.

Payments are made from the Prairie Farm Emergency Fund to which farmers contribute 1 p.c. of the value of all sales of wheat, oats, barley, rye, flaxseed and rapeseed. The additional funds required are provided from the federal treasury. The total collected through the 1-p.c. levy in the 1965-66 crop year, as at Mar. 31, 1966, was \$5,824,647; the amount collected since 1939 was \$168,467,081.

Farmers operating land in the spring wheat area, and not covered by a federal-provincial crop insurance scheme, are eligible for awards. Crop failure and natural causes preventing seeding and summer fallowing are taken into account in making awards. These may not exceed \$800 in respect of any one farmer's total cultivated acreage.

**Feed Grain Assistance.**—The activities of the Feed Grain Administration of the Department of Forestry and Rural Development include the administration of a program respecting freight and storage assistance on western Canadian feed grains used for feeding livestock in Eastern Canada and British Columbia. Under the Feed Grain Assistance Regulations of the Appropriations Act, the original policy was initiated in October 1941 to enable eastern Canadian feeders of livestock and poultry to obtain western-grown feed grains at reduced cost so that livestock and poultry production could be maintained at a high level. This program has been amended over the years, particularly in the past two years with the introduction of a storage assistance program on winter supplies in Eastern Canada, the extension of freight assistance to truck movements of grain and feeds in Eastern Canada and the introduction of a zone system of payment. Orders in Council passed in 1965 and 1966 extended the payment of assistance to winter storage vessels at eastern ports, extended winter storage to storage facilities deemed as supplementary to licensed storage, and removed special winter rail assistance rates on shipments to the Maritime Provinces after the introduction of special water-competitive agreed charges by the railways.

During the year ended Mar. 31, 1966, \$19,395,114 was spent on the freight assistance program to move 2,465,972 tons of feed grains and millfeeds into Eastern Canada and British Columbia, and \$1,173,259 was spent on the payment of storage charges on western feed grains in store in elevators and vessels in Eastern Canada. Freight-assisted shipments, by province of destination, during the year ended Mar. 31, 1966 were:—

<i>Destination</i>	<i>Wheat</i>	<i>Oats</i>	<i>Barley</i>	<i>Screenings</i>	<i>Millfeeds</i>	<i>Total</i>	<i>Expenditure</i>

## Section 2.—Provincial Governments in Relation to Agriculture\*

### Subsection 1.—Agricultural Services

**Newfoundland.**—Government agricultural services in Newfoundland are operated by the Agricultural Division of the Department of Mines, Agriculture and Resources. The Division is in charge of a director who is assisted by a staff of 49 officers. For purposes of administration, the province is divided into nine districts. A fieldman with permanent headquarters is located in each district except Labrador, where the officer is resident for the summer only. Officers in charge of different phases of agricultural development visit each district on assignments from the St. John's office.

Departmental policies in support of the agricultural industry include: a bonus of \$125 an acre on land cleared by privately owned equipment; the distribution of ground limestone at a subsidized rate; the payment of bonuses on purebred sires; and financial assistance to agricultural societies, marketing organizations and exhibition committees. An inspection service is provided for poultry products, vegetables and blueberries, production of the latter being encouraged by the burning of suitable berry areas and the improvement of roads and trails leading to them.

Every encouragement is given to the production of livestock. Poultry and beef production have increased with favourable marketing conditions and with departmental assistance and loans under the Provincial Farm Development Loan Act. The Provincial Veterinarian and his staff supervise the health of animals program and the joint federal-provincial project for the eradication of bovine tuberculosis.

The Agricultural Division co-operates with the Department of Education in furthering the 4-H Club movement in the province and accepts responsibility for all projects pertaining to agriculture.

**Prince Edward Island.**—The activities of the provincial Department of Agriculture are suggested by its staff which includes, in addition to the Minister and Deputy Minister, a dairy superintendent, three check testers, three dairy herd improvement promoters, a director of veterinary services and ten subsidized practising veterinarians, a livestock director, a marketing director, a director of extension, a horticulturist, a soil analysis assistant, a poultry fieldman, an economist, an agronomist, a director of 4-H Clubs, three agricultural representatives, a nursery supervisor, a forester, a farm improvement supervisor, and a director, an assistant director and two extension workers of Women's Institutes.

**Nova Scotia.**—The Department of Agriculture and Marketing endeavours to "help the people to help themselves" through strengthening member interest in such organizations as the Nova Scotia Federation of Agriculture, the Nova Scotia Fruit Growers' Association, various agricultural co-operative organizations, credit unions and producer and marketing organizations.

**New Brunswick.**—Provincial government agricultural policy and programs in New Brunswick are directed by the Department of Agriculture. The Department is headed by the Minister of Agriculture who is assisted by the Deputy Minister and the Directors of the following Branches: extension, livestock and dairy, veterinary, poultry, horticulture, field husbandry, potato and plant protection, agricultural engineering, home economics, credit union and co-operative, agricultural education and rural development.

**Quebec.**—The agricultural policy of Quebec is formed around the premise that the family farm remains the ideal basis of the rural social structure. To serve the interests of agriculture, the provincial government, aided by various co-operative and professional associations, is working toward the improvement of agricultural production and marketing through the provision of farm credit, assistance to the farmer in organizing the collective commercialization of his products, the improvement of education and teaching facilities

\* Information supplied by the agricultural authorities of the various provinces.

for farmers, and the encouragement of agricultural research. In addition, aid is provided in the form of subsidies to the settler and farmer in handicapped rural areas for the construction of buildings, the acquiring of stock, land clearing and development, and the transportation of produce to market. Under the federal-provincial ARDA program, plans are under consideration for the better utilization of farm lands and, generally, the rational development of rural areas.

These services are administered through the Department of Agriculture and Colonization which operates under authority of a Minister, two Deputy Ministers and an Advisory Board, and comprises three Directorates and ten Services, the several divisions and branches of which deal with specific problems. Each Service is headed by a director general.

The *Production and Marketing Service* gives guidance to farmers in the best methods of producing and marketing dairy, animal, horticultural and forestry products and administers the co-operative movement. Co-operative associations for purchasing farm supplies and marketing farm products are particularly prevalent in the Province of Quebec.

The *Research, Education and Information Service* administers the Agricultural Research Council which was founded in 1947 to direct, co-ordinate and stimulate research work in agriculture; the results of such research are published in the annual review *Recherches Agronomiques*. This Service is also concerned with the dissemination of scientific information to farmers and the general public through the press, radio and publications; and with animal hygiene. Veterinary education (the School of Veterinary Medicine at St. Hyacinthe) and agricultural education (Institutes of Agricultural Technology at St. Hyacinthe and Ste. Anne de la Pocatière and fifteen intermediate schools), formerly under the Department of Agriculture and Colonization, are now under the administration of the Department of Education. Information intended to improve family life in general by the cultural enrichment of the farm woman is given through direct teaching, by means of the review *Terre et Foyer*, through local exhibitions and the Provincial Exhibition of Farm Women's Clubs.

The *Rural Planning Service*, through its four sections—economy, planning, development and utilization of land—is mainly concerned with the implementation of joint federal-provincial programs being conducted under the federal Agricultural and Rural Development Act (ARDA). The *Colonization Service* is occupied with the establishment of settlers, concessions of land and clearing of land. The *Farm Planning and Extension Service* is involved in the solving of problems of management and the promotion of agriculture at regional and county levels. Twenty-seven district offices co-ordinate the work of agronomists and specialists. Five-year agricultural contests are held in which the farmers of a parish or county take part, and an annual competition for the Agricultural Order of Merit brings into the limelight the most deserving farmers in each of the five regions into which the province is divided. The work of the *Rural Engineering Service* falls into three categories—colonization roads, mechanized work and drainage work. The *Administration Service* deals with personnel, records and the purchasing and maintenance of materials and tools.

Also under the jurisdiction of the Department are the Farm Credit Bureau, the Quebec Sugar Refining Corporation (St. Hilaire) and the Agricultural Marketing Board.

**Ontario.**—The Ontario Department of Agriculture provides financial assistance and administrative services through its Head Office, 14 Branches and one Demonstration Farm, and through research conducted under the direction of the Ontario Research Institute as well as that under way at the Ontario Agricultural College, the Ontario Veterinary College, Macdonald Institute, Western Ontario Agricultural School, Kemptville Agricultural School and the Horticultural Experiment Station.

The administration of the Department is under the supervision of the Deputy Minister with the assistance of two Assistant Deputy Ministers. The Ontario Agricultural College, the Ontario Veterinary College and Macdonald Institute now form part of the University of Guelph. The Ontario Research Institute is the responsibility of the Director of Research

who, in turn, reports to the Deputy Minister. During 1962 an office was established to develop programs under the federal Agricultural and Rural Development Act.

The Dairy Branch provides an inspection, instruction and supervision service to all dairy factories and promotes the production of clean milk on farms. The Milk Commission, functioning under the authority of the Milk Act, 1965, regulates and supervises the marketing of milk and cream. The Ontario Food Council, which operates as a separate Branch, deals with the problems of marketing and merchandising Ontario's agricultural food products, and is also responsible for the market development program of the Department in an effort to increase markets at home and abroad.

Through a staff of agricultural representatives, one of whom is located in each county and district, the Extension Branch carries on an educational and extension service, and gives leadership to 4-H Club work and to the Ontario Junior Farmers' Association. It also provides assistance to farmers and settlers in northern Ontario in connection with land clearing and breaking and improvement of farms and livestock. The Home Economics Branch gives leadership to organized activities of rural women. The Live Stock Branch promotes livestock improvement policies and gives support to purebred livestock associations. The Veterinary Services Branch administers the Community Sales Act, the Dead Animal Disposal Act, meat and livestock inspection and disease control, and provides diagnostic and extension services.

The Farm Economics, Co-operatives and Statistics Branch carries on research in farm business including cost analysis, marketing and land use; in co-operation with the Dominion Bureau of Statistics it gathers and publishes statistics of agricultural production; assists co-operatives to operate sound businesses under the control of their members and administers the Co-operatives Loans Act. The Agricultural and Horticultural Societies Branch provides assistance to agricultural and horticultural fairs and exhibitions, ploughing matches and other competitions and administers the Community Centres Act. A Demonstration Farm in northern Ontario at New Liskeard demonstrates production methods adaptable to that area, present emphasis being on beef cattle. The Soils and Crops Branch assists in the development of good cultural practices, promotes the use of improved strains of seed, works for the improvement of pastures and administers the Weed Control Act.

The Research Institute co-ordinates all research activities of the province's agricultural schools and colleges in addition to developing a thorough research program in the interests of agriculture and industry associated with agriculture.

**Manitoba.**—The Department of Agriculture and Conservation serves Manitoba through the following branches.

The Extension Service deals with agricultural engineering, entomology and bee-keeping, radio, TV and information, 4-H Clubs and women's work, and has specialists devoting attention to these subjects. Meetings, field days, and short courses are held; 37 agricultural representatives and six assistants are located in 35 offices in the province, each serving from one to five municipalities; and 14 home economists serve designated areas.

The Animal Industry Branch develops and administers policies that encourage the improvement and efficient production of different classes of livestock, including poultry; supervises the grading of cream and inspects dairy manufacturing plants. Several Acts to promote high-quality products for consumer protection are administered in close co-operation with federal departments.

The Soils and Crops Branch encourages the development, production and improvement of cereal, forage, horticulture and special crops and promotes proper land use through soil conservation programs. The Branch develops and administers policies that encourage good field crop husbandry, soil conservation and weed control.

The Economics and Publications Branch deals with agricultural economics, supervises the farm business clubs and publishes and distributes annually approximately 250,000 bulletins, circulars, posters, leaflets, etc. The Publications section publishes agricultural statistics and maintains an agriculture reference library.

The Co-operative Services Branch registers and supervises co-operatives and credit unions and administers the Acts governing them. It also collects and compiles statistics on co-operative activity throughout the province.

The Veterinary Services Branch provides a diagnostic laboratory for animal diseases; administers the brucellosis control program, the Veterinary Services District Act and the Veterinary Science Scholarship Fund Act; works in close co-operation with practising veterinarians and the federal Health of Animals Branch in the control of livestock and poultry diseases.

The Water Control and Conservation Branch administers, through the Water Rights and the Water Power Acts, the water resources of the province and all works in connection with the control and utilization of those resources. The Departmental Act and associated statutes provide for the construction of works to control and use water, and for technical and financial assistance to local governments for the construction, maintenance and operation of such works. The Floodway Division is responsible for co-ordinating all matters respecting design and construction of the Red River Floodway.

**Saskatchewan.**—The Saskatchewan Department of Agriculture is organized in the following branches and services.

The Agricultural Representative Branch has a technical staff of 55, which serves all branches of the Department as well as the other agencies operating within the Co-operative Agricultural Extension Program. Agricultural representatives are active in all federal, provincial and university farm services; they work through Agricultural Conservation and Improvement Committees in each rural municipality and local improvement district to supply the farmer with scientific and practical information and to develop district improvement programs. The Department pays one half the cost of local group development projects. In farm labour matters, co-operation is maintained with the federal Departments of Manpower and Immigration and of Labour.

Animal Industry Branch specialists provide technical information to livestock producers and administer the record of performance program for beef cattle. The Dairy Division of the Branch administers dairy herd improvement programs, assists producers with management and production problems, inspects and licenses dairy manufacturing and frozen-food locker plants, and administers dairy, locker plant and margarine legislation; the Livestock Division encourages the use of suitable animals for breeding purposes by the establishment of purebred sire areas and by assistance in the purchase and distribution of bulls, boars and rams, and registers brands, licenses livestock dealers and agents and promotes programs on insect control, feeding and management; the Poultry Division maintains poultry testing and banding services, licenses produce dealers and buyers, hatcheries and hatchery agents, and otherwise promotes flock improvement; the Veterinary Division assists students in veterinary science under a scholarship plan, administers the Veterinary Service District Act and the calfhood vaccination program, provides a laboratory service for the livestock and poultry industries and co-operates with Federal Government officials and local veterinarians in disease prevention and control.

The Conservation and Development Branch provides engineering services for irrigation development, usually in co-operation with the Federal Government, and for drainage programs and water utilization and control projects. Land reclamation and development and the construction of provincial community pastures also come within its jurisdiction.

The Lands Branch administers Crown land, except forest reserves and parks in settled areas; classifies it according to the use for which it is best suited; disposes of such land under long-term leases; secures land control for land utilization projects; supervises new settlement projects; pays for clearing and breaking by farmers on provincial leases; and operates provincial community pastures.

The Plant Industry Branch conducts grassland improvement programs and programs for crop improvement and protection, and gives advice on soil conservation, horticultural problems, and weed and pest control. The Apiary Division advises on beekeeping and honey production and conducts continuous inspection.

Farmers are assisted by the Family Farm Improvement Branch which gives technical advice at the farm on the construction of farm buildings and on farmstead planning, mechanization and materials handling. The Branch conducts research for farm water and sewage works.

The Economics and Statistics Branch undertakes research and investigations required to formulate and evaluate policies and programs that will ensure a high level of growth and efficiency in Saskatchewan's agriculture; it collects, analyses and distributes economic information and principles to assist people interested in or engaged in agricultural pursuits. Data on crop conditions, production, marketings and income are available from the Statistics Division. Farm information is dispensed daily over private radio stations, over TV stations and to the press by the Information Division.

**Alberta.**—The Alberta Department of Agriculture has seven Divisions. The Plant Industry Division administers programs and policies relating to crop improvement; crop protection and pest control; soils and soil conservation; weed control; horticulture; apiculture and special projects. A crop diagnostic service is offered through a Crop Clinic at Edmonton and horticultural services at a Horticultural Station at Brooks; a Tree Nursery at Oliver provides trees for farm planting.

The Animal Industry Division administers legislation, policies and programs in the broad area of livestock, dairy and poultry production and in processing and marketing, including: setting standards for and approving public sales of sires; sire purchase assistance; ROP programs for beef cattle, swine and sheep; extension programs for all classes of stock; administering standards and qualifications for the artificial insemination (AI) industry; supervising feeder associations; brand registration and inspection; licensing of butchers, livestock dealers, stockyards and AI technicians; pound districts and sale of horned cattle. The testing, grading and purchasing of raw produce by all dairy plants are under regulation, as are standards of construction, manufacture, processing, sanitation and temperature control for dairy and frozen-food plants. A regular cow-testing service to provide the basis for breeding, feeding and culling dairy cattle is available to dairy producers, and chemical and bacteriological analyses are conducted for industrial directives. Licences are issued to poultry hatcheries, wholesalers, first receivers and truckers and programs are conducted for control of pullorum-typhoid diseases of chicken and turkey hatching egg supply flocks; extension programs, cost studies, disease tests and surveys, and research projects with respect to poultry are also carried out.

The Veterinary Services Division provides diagnoses of livestock and poultry diseases and conducts investigations of disease conditions; provides lecture services for the University of Alberta and for other groups; promotes policies aimed at reducing losses such as brucellosis control, stockyard inspection, swine health programs, mastitis, etc.; and administers the licensing and exporting of live fur bearing animals and pelts and assists fur farmers in care, management and stock improvement.

The Extension Branch of the Agricultural Extension and Colleges Division operates 49 offices and employs 64 district agriculturists and 23 district home economists who supply information and guidance to farm families and promote progressive agricultural or home-making policies and programs; the program for 526 4-H Clubs with 1,917 adult leaders is administered; two headquarters engineers and five regional engineers assist farm families with engineering problems; five broadcasts are conducted each week over ten radio stations and weekly bulletins are issued to radio and the press; and publications are supplied to the rural public and visual aids to department staff members. Agricultural and vocational colleges are operated at Olds, Vermilion and Fairview, all three offering five courses in agriculture—a general course, or majors in plant science, animal science, agricultural mechanics and farm management; a complete business course; and a short course in land appraisal and assessment. Special courses include horticulture, fashion and design, irrigation technology at Olds; home economics and AI technician training at Vermilion; and motor mechanics and welding at Fairview.

The Agricultural Economics Division provides extension information on farm management, credit and marketing to aid farmers in instituting good business practices on the

farm; collects, analyses and disseminates agricultural statistics in collaboration with the Dominion Bureau of Statistics; conducts studies on farm production costs and returns, marketing, and resource and rural development; and provides advisory assistance on economic matters to government departments, the agricultural industry and farm groups. Credit is made available to farmers for the purchase of land under the Farm Purchase Credit Act and for home improvements under the Farm Home Improvement Act.

The Water Resources Division administers legislation involving the use of water by individuals or organizations within Alberta and adjoining provinces. Division engineers construct drainage, irrigation, water supply, river control and erosion control projects when it is in the public interest to do so, and staff agrologists are concerned with land levelling for irrigation purposes, assisting settlers, etc. Alberta's large-scale water conservation and utilization program is a direct responsibility of the Division.

The Department also has a Program Development Division which administers the provincial ARDA program, the lands and forest land utilization program, research liaison with the University of Alberta, agricultural liaison on water resource development, trusteeship of the Lethbridge Northern and United Irrigation Districts, provides agricultural representation on the Highways Traffic Board, etc. The Agricultural Products Marketing Council establishes and regulates marketing boards and commissions which assist in the marketing of agricultural products. A new policy is being developed for the administration, operation, maintenance and reconstruction of irrigation projects and districts in the province.

**British Columbia.**—The Department of Agriculture has four main branches. The Administrative Branch is responsible for the general direction of agricultural policies, the administration of legislation affecting agriculture and the compilation of reports and publications. This Branch also maintains direct supervision of the Field Crops, Soil Survey, Plant Pathology, Entomology, Apiary, Markets and Statistics, Farmers' Institutes and Women's Institutes Branches.

The Livestock Branch engages in the promotion and supervision of the livestock industry and provides veterinary services affecting disease control regulations; its work also includes supervision of stock brands, inspection of dairy and fur farm premises, and inspection of licensed abattoirs too small to qualify for federal inspection services. In addition, the Branch supervises the operations of the Dairy Branch in the inspection of commercial dairy premises, dairy farms and the laboratory testing of fluid milk. Officials are stationed at 11 centres throughout the province. The Poultry Branch offers extension services to the poultry industry.

The Horticulture Branch supervises fruit, vegetable and seed production, and provides advice on plant diseases and insect pest control. The Branch maintains field offices at nine points in the southern section of the province.

The Agricultural Development and Extension Branch offers general information services to farmers through 17 offices which cover all major farming districts. In addition, this Branch provides agricultural engineering service, supervision of the government land-clearing program and farm labour services, and promotes junior club projects.

### **Subsection 2.—Agricultural Schools, Colleges and Universities**

All of the provinces of Central and Western Canada have agricultural colleges in association with universities that give courses leading to degrees in agricultural science and home economics and also provide postgraduate courses; Ontario, Quebec and Saskatchewan have veterinary colleges. In addition, all of these provinces have schools of agriculture or diploma courses that provide basic training for young people intending to return to farms or interested in employment in businesses allied with agriculture.

In the Maritime Provinces, training in scientific agriculture is available at colleges in Prince Edward Island and Nova Scotia where courses leading to third-year admission to degree courses elsewhere are given. Vocational and short courses are available in all three provinces. All colleges of agriculture engage in research and extension activities.

### Section 3.—Statistics of Agriculture\*

The collection, compilation and publication of statistics relating to agriculture is a responsibility of the Dominion Bureau of Statistics. Valuable information is obtained through the Censuses of Canada, through partial-coverage mailed questionnaire surveys and from the administrative records of government operations. Because preliminary results of the Census of Agriculture taken June 1, 1966 will be available by April-June 1967 and final results by the end of the year, Section 4 of this Chapter, which normally summarizes the latest census data, contains only basic 1961 data (see p. 503).

The Bureau collects and publishes primary and secondary statistics of agriculture on an annual and monthly basis. The primary statistics relate mainly to the reporting of crop conditions, crop and livestock estimates, wages of farm labour and prices received by farmers for their products. The secondary statistics relate to farm income and expenditure, per capita food consumption, marketing of grain and livestock, dairying, milling and sugar industries and cold storage holdings. In the collection of annual and monthly statistics, the Canada Department of Agriculture and various provincial departments, as well as such agencies as the Board of Grain Commissioners and the Canadian Wheat Board, contribute statistical data to the Bureau and aid directly in DBS survey work. Many thousands of farmers throughout Canada send in reports voluntarily and dealers and processors also provide much valuable data. The figures contained in this Section do not include estimates for Newfoundland; agriculture plays a relatively minor part in Newfoundland's economy and commercial production of most agricultural products is quite small. In the following Subsections, details are given for 1965 with earlier comparisons; figures for the latest year are subject to revision and it should be noted that many of those given for earlier years have been revised since the publication of the 1966 Year Book.

#### Subsection 1.—Income from Farming Operations

**Cash Receipts from Farming Operations.**—Estimates of cash receipts from farming operations include data concerning cash receipts from the sale of farm products, Canadian Wheat Board participation payments on previous years' grain crops, net cash advances on farm-stored grains in Western Canada, deficiency payments made by the Agricultural Stabilization Board, and supplementary payments. Farm cash receipts from the sale of farm products include the returns from all sales of agricultural products except those associated with direct inter-farm transfers. The prices used to value all products sold are prices to farmers at the farm level; they include any subsidies, bonuses and premiums that can be attributed to specific products but do not include storage, transportation, processing and handling charges which are not actually received by farmers.

The DBS has recently revised its estimates of farm cash receipts from farming operations back to 1940. These revisions were based on the most up-to-date information from private and government sources including the Censuses of Agriculture and the 1958 farm expenditure and income survey. They also reflect changes in methods of calculation.

Total cash receipts from farming operations for 1965, excluding supplementary payments, are estimated at \$3,775,800,000 for Canada, excluding Newfoundland; this estimate is a record high and exceeds by 8.2 p.c. the previous high of \$3,488,200,000 established in 1964. The most important contribution to the increase was made by cattle and calves; lesser increases of varying amounts also occurred in the case of hogs, poultry products, dairy products, potatoes, rapeseed, barley, and Canadian Wheat Board participation payments. The most important offset to these gains was a substantial reduction in cash receipts from the sale of wheat; much less significant reductions were recorded for flaxseed, soybeans, fruits and tobacco. Increases in cash receipts occurred in all provinces, the gains ranging from about 5 p.c. in Saskatchewan and British Columbia to just over 27 p.c. in Prince Edward Island.

\* Revised in the Agriculture Division, Dominion Bureau of Statistics.

### CASH RECEIPTS FROM FARMING OPERATIONS 1956-65

Supplementary payments to farmers in 1965 totalled \$28,300,000 as against \$8,500,000 in 1964. The total for 1964 consisted entirely of payments made under the provisions of the Prairie Farm Assistance Act,\* whereas in 1965 these payments included, in addition to PFAA payments, supplementary payments of \$16,900,000 made by the Federal Government to eligible milk and cream producers. Farm cash receipts from farming operations and total supplementary payments together amounted to \$3,804,100,000, about 9 p.c. above the previous record of \$3,496,700,000 in 1964.

*Field Crops.*—Farmers' returns from the sale of field crops plus cash advances on farm-stored grains in Western Canada and Canadian Wheat Board payments amounted to \$1,635,200,000 in 1965, only slightly above the 1964 figure of \$1,600,400,000. The 1965 estimate of returns accounted for about 43 p.c. of farmers' total cash receipts from farming operations, whereas a year earlier it represented about 46 p.c.

The maintenance of this level of returns from field crops in 1965 can be attributed for the most part to a substantial increase in Canadian Wheat Board participation payments on previous years' grain crops, larger net cash advances on farm-stored grains and higher cash receipts from potatoes, rapeseed and barley; total participation payments at \$296,800,000 were \$72,300,000 higher than in 1964. The 1965 payments represented final payments on the marketings of the 1963 crops of wheat, oats and barley of 48.2 cents, 9.8 cents and 22.6 cents per bu., respectively. Total returns to potato growers, at \$104,300,000, were approximately 61 p.c. above the 1964 estimate as a result of a very substantial increase in prices, and the higher receipts from the sale of barley and rapeseed reflect increased marketings. Offsetting these gains to a considerable extent were lower cash receipts from wheat, flaxseed, soybeans, fruits and tobacco, due for the most part to lower marketings. Wheat showed the most significant decline, total receipts dropping to \$658,900,000 from \$738,600,000 in 1964.

\* Payments to farmers under the provisions of the Prairie Farm Assistance Act are made from the Prairie Farm Emergency Fund to which farmers contribute by means of a 1-p.c. levy on grain marketings.

*Livestock and Livestock Products.*—Cash receipts to producers of livestock and livestock products amounted to \$2,101,100,000 in 1965, about 13 p.c. above the level of 1964. Increases in both prices and marketings moved returns from cattle and calves sharply upward from \$640,500,000 to \$772,700,000, a gain of almost 21 p.c., and a substantial increase in average hog prices far more than offset some reduction in marketing to give cash receipts from this source of \$378,700,000, nearly 18 p.c. above 1964.

Producers of poultry products received about 10 p.c. more cash in 1965 than in 1964. Higher average prices for eggs more than compensated for a slight decrease in production and both higher prices and production of poultry meat contributed to the higher return. Output of dairy products was down fractionally but higher prices brought the return up to \$556,400,000 from \$533,900,000 a year earlier; in addition, eligible producers of milk and cream received \$16,900,000 in the form of supplementary payments.

**Net Income of Farm Operators from Farming Operations.**—Two different estimates of net income from farming operations are prepared by the Agriculture Division. One is called *realized net income* and is obtained by adding together cash income from farming operations, supplementary payments and the value of income in kind, and deducting farm operating expenses and depreciation charges. This estimate of farm net income represents the amount of income from farming that operators have left for family living or investment after provision has been made for operating expenses and depreciation charges. The second estimate is referred to as *total net income* and is obtained by adjusting realized net income to take into account changes occurring in inventories of livestock and stocks of grains on farms between the beginning and the end of the year. The latter estimate is the one used to calculate the contribution of agriculture to national income.

Realized farm net income reached an estimated \$1,595,800,000 in 1965, an amount 13.4 p.c. above the 1964 estimate of \$1,407,800,000 and 27.6 p.c. higher than the average of \$1,250,700,000 for the five-year period 1960-64. Although farm operating expenses and depreciation charges moved up 6.3 p.c. during 1965, this increase was more than offset by higher total receipts from the sale of farm products, supplementary payments and income in kind. Changes from 1964 to 1965 in these items are covered in Table 6. Income in kind, which is the value of the farm consumption of home-produced farm products plus an imputed rental value of the farm dwelling, totalled \$432,800,000 in 1965 compared with \$396,400,000 in the previous year, an advance accounted for by an increase in the value of consumption of meat, poultry products, fruits and vegetables and a higher imputed rental value for the farm dwellings.

All items considered in estimating farm operating expenses were higher in 1965 than in 1964. For the third consecutive year, fertilizer accounted for the greatest percentage increase in outlay, reflecting a combination of higher prices and increased consumption. In absolute terms, the most important gain was recorded for feed, the result of substantially increased quantities purchased through commercial channels. Expenditures for hired help continued to rise as wages climbed and increasing use of credit was reflected in a steady rise in farmers' interest payments. Farm land rental payments were up substantially, mainly as a result of the higher share-rental payments arising out of larger crop production in Saskatchewan and Alberta. The steady year-to-year rise in the allowance for depreciation, which was extended into 1965, reflects the continued expansion of mechanization on Canadian farms.

Total farm net income, estimated at \$1,660,300,000 in 1965, was 26.4 p.c. above the 1964 level of \$1,313,200,000 and 29.0 p.c. above the 1960-64 average. Farm inventories of grains in the Prairie Provinces increased substantially between the beginning and the end of the year as a result of a high level of production; this, together with an increased year-end carryover of tobacco, more than offset some decline in livestock numbers.

## 6.—Net Income of Farm Operators from Farming Operations, by Item and by Province, 1962-65

(Exclusive of Newfoundland)

NOTE.—Includes estimated rental value of farm homes, supplementary payments made under the provisions of the Prairie Farm Assistance Act and payments under the Western Grain Producers' Acreage Payment Regulations.

### Subsection 2.—Volume of Agricultural Production

The index of physical volume of agricultural production for Canada established a high of 166.3 in 1965 (1949 = 100), a point 9.8 p.c. above the estimate for 1964 and 2.1 p.c. above the previous record set in 1963. The increase in 1965 over 1964 can be attributed for the most part to a higher production of grains, cattle and poultry meat which more than offset a reduction in the output of hogs. The index was higher than in 1964 for all provinces except Prince Edward Island and New Brunswick. In Prince Edward Island, a lower production of potatoes and eggs more than outweighed moderate increases in cattle and hogs. In New Brunswick, lower production of potatoes and a cut in the output of hogs and eggs more than offset an increase in poultry meat.

In the Prairie Provinces the substantial increases reflected larger grain crops and higher cattle production which more than compensated for some reduction in hogs and poultry products; in Quebec, production of cattle, hogs and potatoes was down but poultry products and fruits were up; in Ontario, production was up for all commodities except calves, hogs, eggs and fruits; in Nova Scotia the over-all increase was attributable mainly to a higher output of poultry products and fruits; in British Columbia, potatoes, cattle and poultry products were up but not quite enough to offset decreases in hogs and fruits.

The index of physical volume of agricultural production is a measure of unduplicated gross farm production. In its construction, provision has been made to avoid double counting of farm output. Within a province, such double counting occurs when feed grains, credited to field crop production, are fed to livestock, and appear later as livestock and livestock products. Interprovincially, this duplication occurs when feed grains produced in one province are fed in another, and when feeder cattle raised in one section of the country are shipped to another for finishing.

## 7.—Index Numbers of Physical Volume of Agricultural Production, by Province, 1956-65

(1949=100. Exclusive of Newfoundland)

NOTE.—For a description of the index, methods and coverage, see DBS publication *Index of Farm Production 1962* (Catalogue No. 21-203).

### Subsection 3.—Field Crops\*

Extremes in weather characterized crop-growing conditions throughout much of Canada during the 1965 season. In the Prairie Provinces seeding was delayed and early growth slowed by generally cool weather but crops developed rapidly during the hot, dry weather that prevailed in late July and early August. However, wheat leaf and stem rusts present over wider than normal areas, combined with very hot weather near the end of the growing season and wet weather that interrupted harvesting, reduced the yield somewhat and caused some losses in grade.

In Central and Eastern Canada, there was a shortage of moisture during the early and mid-portion of the growing season resulting in poor pasture conditions, below-normal yields of hay and generally lowered yield prospects of most crops. However, late summer rains and cool weather encouraged development of most crops in Ontario and Quebec and, despite some delay in maturity, most cereal crop outturns were good. Wet conditions over much of the Maritimes created harvesting difficulties which lowered yields and caused some crop losses in northern areas.

In British Columbia, growing conditions were generally favourable. After a dry mid-season, showers benefited vegetable and later-maturing crops. In the Peace River area of the province grain prospects toward the end of the growing period were fair to good despite late plantings followed by early-season frost damage.

The 1965 index of field crop production for Canada (1949=100), placed at 174.4, was well above the 1964 level of 155.3 but slightly below the 1963 record of 176.5. Manitoba's index reached 170.1, exceeding the previous high of 159.4 established in 1964; Saskatchewan's index, at 212.2, was the third highest for that province, well above the 166.3 reached in 1964 but short of the all-time high of 249.5 in 1963; Alberta's index, at 218.8, was well above the 1964 figure of 186.3 and also above the 1963 next-to-record level of 205.9; and British Columbia's index reached a record 133.4 compared with 132.1 a year earlier. Ontario's record corn and soybean crops helped to maintain its production index at 144.0, compared with the all-time high of 146.1 reached in 1964, but Quebec's index, at 92.8, was much below the 122.2 of the previous year. The 1965 indexes for Prince Edward Island, Nova Scotia and New Brunswick, at 77.8, 58.9 and 78.9, respectively, were each down from comparable levels of the previous year.

Canada's 1965 wheat crop amounted to 648,917,000 bu., some 8 p.c. above the previous year's 600,424,000 bu. and 37 p.c. greater than the ten-year (1954-63) average of 475,100,000 bu. Average yield per acre was up by about 13 p.c., more than offsetting a 5-p.c. decline in seeded acreage. The average protein content of the 1965 crop of hard red spring wheat was 13.5 p.c., compared with 14.9 p.c. in 1964 and with an average of 13.6 p.c. for the period 1927-64.

\* The supply and disposition of the major Canadian grains is dealt with in Chapter XXI, Part I, Sect. 2, under the heading of "The Grain Trade, 1964-65".

Supplies of Canadian feed grains (corn, oats, barley, mixed grains and buckwheat) in the crop year 1965-66 were 5 p.c. above the previous crop year, reflecting increased production of most feed grains which more than offset generally lower carryover stocks compared with the previous year. Compared with 1964-65, supplies of oats (Aug. 1, 1965 carryover of 130,100,000 bu. plus the 1965 production of 415,000,000 bu.) were up about 2 p.c.; supplies of barley (carryover of 88,800,000 bu. plus a crop of 214,600,000 bu.) were up 7 p.c.; and supplies of rye (totalling 25,000,000 bu.) were up 29 p.c. The 1965 record crop of mixed grains at 74,200,000 bu. was up from the 66,400,000 bu. of 1964 and production of grain corn was at an all-time high of 59,600,000 bu. Net feed grain supplies (total supplies less estimated exports, seed requirements and human food and industrial requirements) amounted to 18,100,000 tons, some 7 p.c. above the 1964-65 total of 16,900,000 tons and 13 p.c. above the ten-year (1954-63) average of 16,100,000 tons.

There were 21,099,000 tons of tame hay produced in 1965, 1 p.c. less than in 1964, but the 5,161,000 tons of fodder corn produced was 4 p.c. higher than in the previous year. Significant production increases occurred in 1965 for all oilseed crops except sunflower seed; soybeans and flaxseed were above, rapeseed almost double and mustard seed almost triple the 1964 quantities. Potato production in 1965 at 46,472,000 cwt. was down 3 p.c. from 1964. New Brunswick was the highest producer with an output of 11,280,000 cwt. followed by Ontario, Prince Edward Island and Quebec with 10,584,000 cwt., 7,341,000 cwt. and 7,239,000 cwt., respectively. The 1965 field root crop at 294,000 tons and the sugar beet crop at 1,142,341 tons were both lower than in 1964, owing mainly to the smaller acreage planted.

**Stocks of Canadian Grain.**—Table 11 shows the stocks of Canadian grain on hand in Canada and in the United States on July 31 for the years 1961-65, with averages for the five-year periods 1950-54 and 1955-59. Stocks in Canada are separated into those in commercial positions and those on farms. Stocks on farms and in country elevators in the Prairie Provinces are given separately.

**11.—Carryover of Canadian Grain as at July 31, 1961-65, with Averages for 1950-54 and 1955-59**

#### Subsection 4.—Livestock and Poultry

**Livestock.**—Several new records were set in 1965 by the livestock industry. Public markets established the highest volume ever recorded in weekly deliveries. Higher prices were received for most classes of livestock and domestic and export demand remained consistently broad. The 551,983 head of cattle exported was the second highest number

on record, exceeded only in 1958; exports of live calves also increased substantially, amounting to 60,940 head. There was an important change in the export-import trade compared with 1964 in that no slaughter cattle or calves were imported from the United States in 1965. Despite higher prices during most of the year, the over-all averages for all cattle and calves were about the same as in 1964; this was due to the exceptionally heavy volume of cows marketed, another noteworthy feature of 1965. At June 1, 1965 the number of cattle and calves in Canada (excluding Newfoundland and the Territories) was estimated at a record 13,001,000, a 1.4-p.c. increase over June 1 of the previous year. Beef cow numbers continued to increase in number and at 2,870,800 were up 5.2 p.c. but milk cow numbers declined by about 1 p.c. to 2,885,000, the lowest since 1916.

Higher prices were obtained for hogs during the year, moving to all-time highs in November and December; the year's high of \$43.60 for Grade A hogs was reached at Toronto on Dec. 28. Total marketings were 2.8 p.c. below those of the previous year, but were the fifth largest on record; Grade A hogs made up 41.1 p.c. of the total marketings, also a new high. At June 1, 1965 the hog inventory stood at 5,136,000, down 9 p.c. from the same date of 1964.

The number of sheep on farms at June 1 was 1,167,000, the lowest since the start of recordings in 1920. There was a sharp increase in the direct export of live animals at 20,780 compared with 9,747 in 1964 but live imports at 17,660 were down almost a third.

Per capita disappearance of all red meats in 1965 was estimated at 146.3 lb., 2.8 lb. lower than in 1964. The figures for individual meats were: beef 78.7 lb. (78.5 in 1964); veal 8.0 lb. (6.9); mutton and lamb 2.8 lb. (3.4); pork 49.2 lb. (52.0); offal 3.4 lb. (3.8) and canned meats 4.2 lb. (4.5). All figures are on a cold dressed carcass basis.

PER CAPITA CONSUMPTION OF MEAT,  
1946 AND 1965

<sup>1</sup> Cows and heifers, two years old or over, kept for milk purposes.

The Canada Department of Agriculture inspects all livestock in plants designated as inspected establishments under the Meat and Canned Foods Act. A record is kept of these inspections and figures from 1956 are given in Table 13. Local wholesale butcherings and slaughterings carried out by retail butchers and by farmers for their own use are not included. Actually, the slaughtering and meat packing industry is concentrated in a comparatively small number of large establishments to facilitate greater efficiency and utilization of products; thus the figures of Table 13 are fairly inclusive.

Almost 13 p.c. more cattle were slaughtered in inspected establishments in 1965 than in 1964, and slaughterings of calves were up 19 p.c. On the other hand, slaughterings of sheep and lambs declined by 17.7 p.c. and slaughterings of hogs by 3.1 p.c.

**Subsection 5.—Dairying**

The dairy industry occupies a prominent position in Canadian agriculture and is an important source of farm cash receipts. Although the size of the national dairy herd has been declining gradually, milk production declined in 1965 for the first time in six years.

There has been an over-all increase in output per cow as a result of the tendency to switch from low-producing breeds and from the following of improved livestock programs, especially through artificial insemination. Dairy herds have become fewer but larger. In 1951 about 12 p.c. of the cows were in herds of 13 or more but by 1961 the percentage had risen to 27. In Ontario and Quebec over 40 p.c. are now in this category. Increasing specialization and the change to larger herds often means better managed cows and more milk per cow.

Milk production is concentrated in Central Canada, Ontario and Quebec accounting for about 71 p.c. of the total quantity. Of the total output in 1965, 61.9 p.c. was used for factory-made dairy products, 28.6 p.c. was sold in fluid form and 9.5 p.c. was used for all purposes on farms. In recent years, fluid milk usage has risen slowly but has shown little change as a percentage of total milk production. Fluid sales, which include standard, homogenized, partly skimmed and skim milk, and a variety of creams, are being maintained by the increased demand for partly skimmed milk which has occurred as a result of a shift in emphasis from fat to non-fat constituents in milk.

<sup>1</sup> Used in farm butter only.<sup>2</sup> Includes values of skim milk and buttermilk retained on farms.

Historically, butter was the residual product into which the summer milk was made for storage and use during the winter months. This still occurs, particularly in Prince Edward Island, Quebec and the Prairie Provinces where slightly over half the milk is made into butter.

In 1965, about 337,000,000 lb. of creamery butter and 4,000,000 lb. of farm butter were produced in Canada, accounting for 7,976,000,000 lb. of milk or about 44 p.c. of the national output. The demand for solids non-fat has encouraged farmers to ship increasing quantities of whole milk instead of farm-separated cream to the creameries. Whole milk used in butter manufacturing was estimated at 3,200,000,000 lb. in 1965, more than the amount used in all other manufactured dairy products. Consumption per capita of creamery butter was 18.18 lb. compared with 18.54 lb. in 1964.

During the past ten years, cheese production has gradually increased, particularly in Ontario and Quebec. These two provinces in 1965 accounted for 95.9 p.c. of the total output. In that year, some 172,900,000 lb. of cheese were produced, which represented about 1,898,000,000 lb. of milk or approximately 10 p.c. of the total milk production. Exports of all cheese, mostly cheddar, amounted to 32,055,000 lb. compared with 31,658,000 lb. in 1964. Most of the Canadian exports of cheddar traditionally originate in Ontario, which exports about 38 p.c. of its production.

<sup>1</sup> Factory-made cheese includes cheddar and other cheese made from whole milk and cream.

<sup>2</sup> Amounts for "other cheese" are included in Quebec, Ontario and Alberta figures but, as fewer than three firms reported in the other provinces, data cannot be included except in the Canada total.

Concentrated milk products, which comprise a large group of both whole milk and skim milk products, are moving in opposite utilization trends. The amount of milk going into whole milk products—evaporated milk, dry whole milk, partly skimmed concentrated products, etc.—is decreasing; milk used for these products amounted to 984,000,000 lb.

in 1965, about 49,000,000 lb. less than in 1961. On the other hand, there is a rapidly expanding market for solids non-fat, in the form of dry skim milk and casein; in the period 1958-65, the quantity of whole milk from which these two products were made rose by 1,300,000,000 lb. to 3,700,000,000 lb. Casein production is concentrated in Quebec, about 93 p.c. of the national total originating in that province.

The importance of international trade in this sector of the industry is evident from the fact that of every 10 lb. of whole milk powder produced in Canada, nine are exported; of every 10 lb. of casein produced, seven are sold abroad; and of every 10 lb. of skim milk powder produced, four are exported. In normal years, export values of dairy products are three times as large as import values.

The estimated consumption of fluid milk and cream, on a milk basis, amounted to 4,745,166,000 pt. in 1965, which was 62,912,000 pt. higher than the 1964 estimate. Daily average consumption per capita amounted to 0.68 pt., unchanged from the previous year. The estimated consumption of milk and cream is given by province in Table 21 and the domestic disappearance of all dairy products in Table 22.

<sup>1</sup> Includes Newfoundland for all manufactured dairy products.<sup>2</sup> Includes, in addition to the items listed,

malted milk, cream powder, partly skimmed evaporated milk, whole milk powder of less than 26-p.c. fat, formula milks, evaporated milk of 2-p.c. fat, and concentrated liquid milk.

<sup>3</sup> Includes milk by-product items not listed, i.e., condensed buttermilk, powdered buttermilk, sugar of milk, casein, powdered whey, special formula skim milk products, lactalbumin and concentrated liquid skim milk. Since the quantities used for human consumption and livestock feeding cannot be separated, per capita figures include both.<sup>4</sup> Includes ice cream

mix in terms of milk.

## Subsection 6.—Fruits, Vegetables and Other Farm Products

**Fruits.**—Commercial fruit growing in Canada is confined almost exclusively to rather limited areas in the Provinces of Nova Scotia, New Brunswick, Quebec, Ontario and British Columbia. Nova Scotia production is centred mainly in the Annapolis Valley and New Brunswick production in the St. John River Valley and Westmorland County. The fruit growing districts of Quebec are the Montreal area, the North Shore area, the Eastern Townships and the Quebec City district. Ontario fruit is grown in all the counties adjacent to the St. Lawrence River and the Great Lakes as far west as Georgian Bay, the Niagara district being the most productive. In British Columbia the four well-defined fruit areas are the Okanagan Valley, the Fraser Valley, the Kootenay and Arrow Lakes district and Vancouver Island. The climate elsewhere in Canada is not generally suitable for commercial tree-fruit culture. In most producing areas, particularly in the Annapolis Valley of Nova Scotia, the Niagara Peninsula of Ontario and the Okanagan Valley of British Columbia, fruit growing is either the principal or one of the most important forms of agriculture and is very important to the economy of those areas. Apples and small fruits are produced commercially in the provinces named but tender tree fruits and commercial vineyards are limited largely to Ontario and British Columbia.

Strawberries are grown commercially in all provinces for which tree-fruit statistics are prepared, as well as in Prince Edward Island. However, this crop is produced over a somewhat wider area than are tree fruits. In Nova Scotia, for example, considerable quantities of strawberries are grown in Colchester County and farther north, as well as in the apple producing areas of the Annapolis Valley. In British Columbia most of the strawberries are grown in the Fraser Valley.

Raspberries are grown commercially in Nova Scotia, New Brunswick and Quebec but the bulk of the crop is produced in Ontario and British Columbia. The Fraser Valley of British Columbia is the most important producing area.

Wild blueberries are harvested on a commercial scale in Newfoundland, Prince Edward Island, Nova Scotia, New Brunswick and Quebec. This crop is indigenous to certain areas in these provinces and a large percentage of the crop is frozen and exported. There is also some production of cultivated blueberries, particularly in British Columbia.

A marketing system has been developed for distributing fresh fruit from the specialized production areas to all parts of the country and a large proportion of the deciduous fruit consumed in Canada is grown domestically. Considerable quantities of apples, strawberries and blueberries are exported.

Tables 23 and 24 show the estimated commercial production of fruit, by kind, for the years 1963-65 and by province for 1958-65.

### 23.—Estimated Commercial Production and Farm Value of Fruit, 1963-65

<b>Totals.....</b>	<b>50,813</b>	<b>67,278</b>	<b>73,954</b>	<b>64,379</b>

**Vegetables.**—Estimates of acreage and production of commercial vegetables in Canada are prepared for all provinces except Newfoundland and Saskatchewan; only partial estimates were prepared for Prince Edward Island until 1965. Ontario is the largest producer, followed by Quebec and British Columbia. A wide variety of crops is grown in these three provinces and a somewhat smaller range in the Maritimes and in the Prairie Provinces.

Canning, freezing and processing of vegetables are carried on in the important producing areas. The estimates in the following tables cover output of commercial growers for processing and for sale on the fresh market but do not include acreages or production of vegetables grown for home use on farms or elsewhere.

**25.—Estimated Commercial Acreage of Vegetables, by Province, 1963-65 with Average for 1958-62**

Province	Av. 1958-62	1963	1964	1965

<sup>1</sup> Includes Prince Edward Island for 1965.

<sup>2</sup> Estimates apply only to that portion of the crop grown for processing in all provinces for which estimates are made except British Columbia.

**Tobacco.**—Canada produces several types of leaf tobacco but by far the most important is the flue-cured or Bright Virginia type. This is grown mainly in Ontario, along with considerable quantities of burley and smaller amounts of dark (air-cured and fire-cured) tobacco. Quebec produces smaller quantities of these types as well as some cigar and pipe tobacco and small flue-cured acreages are also harvested in Prince Edward Island, Nova Scotia and New Brunswick. In 1965, increased plantings of flue-cured tobacco in Ontario from 73,479 acres to 86,870 acres was the principal reason for the production of a slightly larger total crop than in 1964; the crop increased in volume approximately 18,000,000 lb. to slightly over 154,000,000 lb.

A study of Department of National Revenue reports on tax-paid withdrawals of tobacco products reveals changes in the smoking habits of Canadians during the past three decades. In 1922, the first year for which comparable figures are available, Canadian annual per capita consumption of cigarettes was 229; by 1959 the annual per capita consumption (calculated on the basis of total population) had increased to 1,939, by 1964 to 2,113 and by 1965 to 2,198.

<sup>1</sup> Includes other types not specified.

**Eggs.**—Egg production in 1965 at 432,795,000 doz. was 1.2 p.c. lower than the output of 1964 and 3.4 p.c. lower than the record production in 1959, which amounted to 448,200,000 doz. The number of layers decreased slightly and the rate of lay per 100 layers dropped to 20,012 from 20,095. The farm selling price of eggs averaged 36.3 cents per doz. compared with 32.7 cents in 1964 so that, despite the lower production, there was an increase in total value of eggs produced. The three Maritime Provinces produced 7.3 p.c. of all eggs in 1965; Quebec, 17.8 p.c.; Ontario, 39.4 p.c.; the Prairies, 24.2 p.c.; and British Columbia, 11.3 p.c.

<sup>1</sup> Total laid less loss.

**Wool.**—Canada produces only about one tenth of her total wool requirements; imports in 1965 were 65,222,000 lb., about 5 p.c. more than in 1964. Exports were 4,236,000 lb. compared with 3,223,000 lb. in 1964. The apparent domestic consumption of wool shown in Table 30 is determined on the basis of production, exports and imports but does not take into consideration changes in stocks for which the data are not available. Differences in wool utilization from year to year are therefore probably less marked than is indicated by these figures.

**30.—Production and Apparent Consumption of Wool, 1961-65**

Item	1961	1962	1963	1964	1965

<sup>1</sup> Includes Agricultural Stabilization Act payments of 22 cents per lb. in 1961, 18.26 cents per lb. in 1962, 14.3 cents per lb. in 1963, 12.3 cents per lb. in 1964 and 16.3 cents per lb. in 1965 on qualifying graded wool. <sup>2</sup> See text above.

**Honey.**—As shown in Table 31, honey production was 34 p.c. higher in 1965 than in 1964 and established an all-time record for Canada. The number of colonies and the average yield per colony were both higher than in 1964.

Honey is produced commercially in all provinces except Newfoundland and yields tend to vary considerably from year to year. In 1965, Alberta was the largest producer, surpassing Ontario which had the highest production in 1964. Honey bees are kept in some of the fruit growing districts for purposes of pollination and are also used for the pollination of certain seed crops.

To facilitate storage, shipment and uniformity of quality, large quantities of Canadian honey are pasteurized. Beekeepers' marketing co-operatives are active in several provinces. In 1965, 7,900,000 lb. of honey valued at \$2,070,000 were exported from Canada, the main countries of destination being Britain, West Germany, Belgium and Luxembourg, Norway, Japan and the United States.

**Sugar Beets and Beet Sugar.**—Sugar beets are grown commercially in Quebec, Ontario, Manitoba and Alberta and beet sugar factories are located in these provinces. In Quebec, commercial production is centred in the St. Hilaire area of the Eastern Townships; in Ontario, production is confined to the southwestern section of the province. Alberta produces the largest crop and in that province sugar beets are grown under irrigation.

**Maple Sugar and Maple Syrup.**—Maple syrup is produced in the Provinces of Nova Scotia, New Brunswick, Quebec and Ontario. The bulk of the crop comes from the Eastern Townships of Quebec, a district famous both in Canada and in the United States as the centre of the maple products industry. Virtually all of the maple products exported are sent to the United States with the larger proportion moving as sugar, although substantial quantities of syrup are also shipped. Much of the syrup sold in Canada is marketed in one-gallon cans direct to the consumer from the producer but a considerable amount of both sugar and syrup is sold each year to processing firms.

**Nursery Stock.**—Statistics concerning the nursery industry in Canada for recent years are presented in Tables 35 and 36. All nurseries were asked to report quantities sold of stock propagated during these years; stock purchased from other nurseries in Canada was excluded to prevent duplication. A total of 234 nurseries reported shipments in 1964. Wholesale value of nursery stock shipments of fruit trees, etc., amounted to \$683,619 compared with \$581,059 in the previous year, and shipments of ornamental species to \$4,886,103 compared with \$4,225,891.

<sup>1</sup> Includes the Maritime Provinces for which insufficient information was reported.

**Greenhouse Operations.**—Annual surveys are made of greenhouse operations. Resulting figures are based on data reported by firms and individuals returning questionnaires, with the exception of that for cucumbers and tomatoes grown in Essex County of Ontario (the most important producing area), which are based on information obtained from the local co-operative marketing agency. Only greenhouses used for the production of items for sale are included in the survey.

<sup>2</sup> Included in Saskatchewan.

<sup>3</sup> Total area of glass and value of vegetable sales for British Columbia not comparable with data for previous years.

### Subsection 7.—Prices of Agricultural Products

The monthly index of farm prices of agricultural products was designed to measure changes occurring in the average prices farmers receive at the farm from the sale of farm products. In comparing current index numbers with those before August 1965, certain points should be considered. Western grain prices used in the construction of the index before Aug. 1, 1965 are final prices for all grains. For the remaining months of 1965, the western grain prices used in the index are initial prices. Subsequent participation payments made on the 1965 crops will be added to the prices currently used and the index revised upward accordingly.

### 38.—Average Index Numbers of Farm Prices of Agricultural Products, by Province, 1961-65, and Monthly Indexes for 1964 and 1965

(1935-39 = 100)

NOTE.—A description of this index, its coverage and the methods used will be found in *DBS Quarterly Bulletin of Agricultural Statistics* (Catalogue No. 21-003) for October-December 1946. Monthly prices of grain and of livestock are carried in the current issues of the same publication.

## Subsection 8.—Food Consumption

Food consumption figures represent available supplies, including production and imports, adjusted for change of stocks, exports, marketing losses and industrial uses. All calculations are made at the retail stage of distribution, except for meats for which the figures are worked out at the wholesale stage. The amount of food actually eaten would be somewhat lower than indicated because of losses and waste occurring after the products reach the hands of the consumer. It should also be pointed out that there are minor inaccuracies in certain of the figures since statistics of storage stocks in the hands of retailers and consumers are not available.

All basic foods are classified under 12 main commodity groups. The total for each group is computed using a common denominator for the group, for example: milk solids (dry weight) in the dairy products group; fat content for fats and oils; and fresh equivalent for fruits. All foods are included in their basic form, that is, as flour, fat, sugar, etc., rather than in more highly manufactured forms.

The series in Table 41 represents the official estimates of yearly supplies of food moving into consumption, expressed in pounds per capita, for the years 1959-63 as an average for comparison with the years 1963 and 1964.

**41.—Per Capita Supplies of Food Moving into Consumption 1963 and 1964, with Average for 1959-63**

<sup>1</sup> Fluctuations in apparent per capita flour consumption are caused partly by lack of complete data on flour inventories in all positions. <sup>2</sup> Includes soybean flour. <sup>3</sup> Tomatoes canned, tomato juice, tomato

pulp, paste and purée, and ketchup. <sup>4</sup> Exclusive of Newfoundland. <sup>5</sup> Includes process cheese.

<sup>6</sup> Cream powder included in whole milk powder for 1963 and 1964. <sup>7</sup> Includes cream expressed as milk.

<sup>8</sup> Includes evaporated and condensed skim milk, condensed buttermilk, sugar of milk, formula skim milk products and concentrated liquid skim milk.

**Disappearance of Meats and Lard.**—Production of meats from slaughter in Canada, total supply, distribution and per capita disappearance of meats and lard are shown in Table 42. All estimates are on a carcass-weight basis except canned meats, which are in terms of product.

<sup>1</sup> Quantity small; included with beef.      <sup>2</sup> Trimmed of larding fat and excluding offal.      <sup>3</sup> Includes commercial lard production and estimated lard equivalent of renderable pork fat available from all uninspected slaughter.

## Section 4.—Agricultural Statistics of the Census

Data from the Census of Agriculture taken June 1, 1966 were not available at the time of preparation of this volume. Preliminary reports are scheduled for release in April-June of 1967 and final reports in October and November of that year. A list of these reports and their prices is available from the DBS on request.

Meanwhile, 1956 and 1961 Census of Agriculture data showing number of farms and use of farm land by province is given in Tables 43 and 44. Additional brief data on size of farms, persons employed in agriculture, farm machinery, farm electrification and farm capital are included in the 1966 Year Book at pp. 511-514 and on the economic classification of farms and tenure and age of farm operators in the 1963-64 edition at pp. 478-482. Details are contained in Vol. V of the 1961 *Census of Canada* and in a number of special census reports, all procurable from the DBS or the Queen's Printer, Ottawa.

**Number of Farms.**—There were 16 p.c. fewer farms in Canada in 1961 than in 1956, the year of the immediately preceding census. The number dropped from 575,015 in the earlier year to 480,903 in the later. However, part of this decrease was attributable to a change in the census definition of a farm. In the 1956 (and 1951) Census, a farm was defined as a holding on which agricultural operations were carried out and which was (a) three acres or more in size, or (b) from one to three acres in size and with agricultural production during the previous year valued at \$250 or more. In the 1961 Census, a farm was defined as a holding of one acre or more with the sales of agricultural products during the previous year valued at \$50 or more. On the basis of the 1956 definition, the decrease in the number of farms was from 575,015 to 521,634 in 1961, or about 9 p.c.

## 43.—Number of Farms, by Province, Censuses of 1956 and 1961

<sup>1</sup> See text immediately preceding table.

**Farm Areas.**—The total area of farms as defined in the 1961 Census was 172,551,051 acres, only slightly less than the 173,923,691 acres recorded in 1956. Improved farm land for the country as a whole was up 3 p.c. from 100,326,243 acres to 103,403,426 acres and unimproved farm land, which includes woodland and rough pasture, was down about 6 p.c. from 73,597,448 acres to 69,147,625 acres. Decreases in total farm area in the six eastern provinces and in British Columbia offset by almost 1,400,000 acres the increases in total farm area in the Prairie Provinces and the Territories. As Table 44 shows, only Manitoba, Alberta and British Columbia reported more farm land under crops in 1961 than in 1956 but the total increase in these provinces was somewhat less than the total decrease in the other provinces. On the other hand, the total increase in improved pasture in the four western provinces was somewhat greater than the total decrease in the eastern provinces and there was a substantial increase in the acreage under summer fallow for Canada as a whole.

## Section 5.—International Crop Statistics

Tables 45 and 46 are based on estimates published in March and April 1966 by the Foreign Agricultural Service, United States Department of Agriculture, and give the acreages and production of wheat and the production of oats and barley for the harvests of 1964 and 1965 with average for the years 1955-59, in the leading countries of the world.

## 45.—Estimated Acreages and Production of Wheat Harvested in 1964 and 1965 in Specified Countries, with Average for 1955-59

*The interpretation of the symbols used in the tables throughout the Year Book will be found on p. viii of this volume.*

Canada's extensive forests have been an invaluable asset to the country and its people since the earliest days of settlement. The productive portion of these forests has poured increasing wealth into the stream of national income, contributing to the economy of the country as the producer of raw materials for industry and as the source of livelihood for hundreds of thousands of persons. Perhaps in no other country is the national wealth so dependent upon its forest resources and the success of its forest industries as in Canada. The annual forest harvest of some 3,424,000,000 cu. ft. supports a highly complex and diversified export and domestic industry directly employing more than 300,000 persons and paying out \$1,200,000,000 annually in salaries and wages. The forests support 8,000 sawmills and 4,000 wood-using plants, many of them small units contributing appreciably to the income of local economies. The pulp and paper industry alone stands first among Canadian manufactures in terms of employment, wages paid, new investment and net value of output, and the sale of forest products abroad represents about 27 p.c. of the value of Canada's export trade.

The predominant part played by the pulp and paper, lumber and other forest products industries in the development of the country and in its current economy has resulted in a widespread tendency to evaluate the forest in terms of timber alone. But equally important is the fact that the existence of widespread forest cover, productive or unproductive in the sense of human utilization, remains essential to the maintenance of the balance of nature—in protecting water-catchment areas and assuring supplies of water, in lowering the temperature, reducing the velocity of the wind and protecting the land against drought and erosion, and in providing shelter for birds and animals. It is reassuring that a growing realization of the economic importance of the forest for its non-commercial values, including recreation and wildlife and watershed protection, is bringing about increasing recognition of the true value of the forest and is thus developing a broader concept of forestry.

### Section 1.—Forest Resources

**Forest Regions.**†—The forests of Canada cover a vast area in the north temperate climatic zone but wide variations in physiographic soil and climatic conditions cause marked

\* Sections of this Chapter that deal with forest resources and depletion and the federal forestry program were revised by the Department of Forestry and Rural Development, Ottawa. Provincial forestry programs were prepared by the forestry officials of the respective provincial governments. Sections dealing with forest and allied industries, except as otherwise noted, were revised in the Forestry Section, Industry Division, Dominion Bureau of Statistics.

† A more detailed discussion of forest regions is given in Bulletin 123, *Forest Regions of Canada*, published by the Department of Forestry and Rural Development.

differences in their character in different parts of the country; hence, eight fairly well-defined forest regions may be recognized. These regions, with the relative proportion of the total area of all forest regions occupied by each, are as follows:—

Region	Percentage of Forest Area	Region	Percentage of Forest Area
Boreal.....	82.1	Acadian.....	2.0
Great Lakes-St. Lawrence.....	6.5	Columbia.....	0.8
Subalpine.....	3.7	Deciduous.....	0.4
Montane.....	2.3		
Coast.....	2.2	TOTAL.....	100.0

*Boreal Forest Region.*—This Region comprises the greater part of the forest area of Canada, forming a continuous belt from Newfoundland and the Labrador coast westward to the Rocky Mountains and northwestward to Alaska. The white and the black spruces are characteristic species; other prominent conifers are tamarack which ranges throughout, balsam fir and jack pine in the eastern and central portions, and alpine fir and lodgepole pine in the western and northwestern parts. Although the forests are primarily coniferous, there is a general admixture of broadleaved trees such as the white birches and poplars; these are important in the central and south-central portions, particularly in the zone of transition to the prairie. In turn, the proportion of spruce and tamarack rises northward and, with increasingly rigorous climatic conditions, the close forest gives way to the open lichen-woodland which finally merges into tundra. In the east there is, along the southern border of the Region, a considerable intermixture of species from the Great Lakes-St. Lawrence Forest such as the white and the red pines, yellow birch, sugar maple, black ash and eastern white cedar.

*Great Lakes-St. Lawrence Forest Region.*—Along the Great Lakes and the St. Lawrence River Valley lies a forest of a very mixed nature, characterized by the white and the red pines, eastern hemlock and yellow birch. With these are associated certain dominant broadleaved species common to the Deciduous Forest Region, such as sugar maple, red maple, red oak, basswood and white elm. Other species with wide range are the eastern white cedar and largetooth aspen and, to a lesser extent, beech, white oak, butternut and white ash. Boreal species, such as the white and the black spruces, balsam fir, jack pine, poplars and white birch, are intermixed and, in certain humid portions of the east, red spruce is abundant.

*Subalpine Forest Region.*—This is a coniferous forest found on the mountain uplands in Western Canada. It extends northward to the major divide separating the drainage of the Skeena, Nass and Peace Rivers on the south and to that of the Stikine and Liard Rivers on the north. The presence of the black and the white spruces plus aspen and birch indicates a close relationship with the Boreal Region, and the characteristic species—Engelmann spruce, alpine fir and lodgepole pine—have boreal counterparts. There is some entry of blue Douglas fir from the Montane Forest and of western hemlock, western red cedar and amabilis fir from the Coast Forest. Other species found are western larch, whitebark pine, limber pine and, on the coastal mountains, yellow cedar and mountain hemlock.

*Montane Forest Region.*—The Region occupies a large part of the interior uplands of British Columbia as well as a part of the Kootenay Valley and a small area on the east side of the Rocky Mountains. It is a northern extension of the typical forest of much of the western mountain system in the United States and comes in contact with the Coast, Columbia and Subalpine Forests. Ponderosa pine is a characteristic species of the southern portions. Blue Douglas fir is found throughout but more particularly in the central and southern parts; lodgepole pine and aspen are generally present, the latter being particularly

well represented in the north-central portions. Engelmann spruce and alpine fir from the Subalpine Region together with white birch are important constituents in the northern parts. The white spruce, though primarily boreal in affinity, is also present here. Extensive prairie communities of bunch-grasses and forbs are found in many of the river valleys.

*Coast Forest Region.*—This is part of the Pacific Coast forest of North America. Essentially coniferous, it consists principally of western red cedar and western hemlock with abundant Sitka spruce in the north and with the addition of Douglas fir in the south. Amabilis fir and yellow cedar occur widely and, together with mountain hemlock and alpine fir, are common toward the timber-line. Western white pine is found in the southern parts and western yew is scattered throughout. Broadleaved trees, such as black cottonwood, red alder and broadleaf maple, have a limited distribution. Arbutus and Garry oak, species whose centres of population lie southward in the United States, occur in Canada only on the southeast coast of Vancouver Island and the adjacent islands and mainland.

*Acadian Forest Region.*—Over the greater part of the Maritime Provinces, exclusive of Newfoundland, there is a forest closely related to the Great Lakes-St. Lawrence Region and, to a lesser extent, to the Boreal Region. Red spruce is a characteristic though not exclusive species and associated with it are balsam fir, yellow birch and sugar maple, with some red pine, white pine and hemlock. Beech was once an important forest constituent but the beech bark disease has drastically reduced its abundance in Nova Scotia, Prince Edward Island and southern New Brunswick. Other species of wide distribution are the black and the white spruces, red oak, white elm, black ash, red maple, white birch, wire birch and the poplars. Eastern white cedar, though present in New Brunswick, is extremely rare elsewhere and jack pine is apparently absent from the upper St. John Valley and the western half of Nova Scotia.

*Columbia Forest Region.*—A large part of the Kootenay River Valley, the upper valleys of the Thompson and Fraser Rivers and the Quesnel Lake area of British Columbia contain a coniferous forest closely resembling that of the Coast Region. Western red cedar and western hemlock are the characteristic species in this interior "wet belt". Associated trees are the blue Douglas fir which is of general distribution and, in the southern parts, western white pine, western larch, grand fir and western yew. Engelmann spruce from the Subalpine Region is important in the upper Fraser Valley and is found to some extent at the upper levels of the forest in the remainder of the Region. At lower elevations in the west and in parts of the Kootenay Valley the forest grades into the Montane Region and, in a few places, into prairie grasslands.

*Deciduous Forest Region.*—A small portion of the deciduous forest, widespread in the eastern United States, occurs in southwestern Ontario between Lakes Huron, Erie and Ontario. Here, with the broadleaved trees common to the Great Lakes-St. Lawrence Region, such as sugar maple, beech, white elm, basswood, red ash, white oak and butternut, are scattered a number of other broadleaved species which have their northern limits in this locality. Among these are the tulip-tree, cucumber-tree, papaw, red mulberry, Kentucky coffee-tree, redbud, black gum, blue ash, sassafras, mockernut and pignut hickories, and scarlet, black and pin oaks. In addition, black walnut, sycamore and swamp white oak are confined largely to this Region. Conifers are few and there is only a scattered distribution of white pine, tamarack, red juniper and hemlock.

*Forest Land.*—The forest area of Canada is estimated at 1,710,788 sq. miles, about 57 p.c. of which is "productive" in the sense that it is capable of producing merchantable timber; the remainder is incapable of producing merchantable timber because of adverse climatic, soil or moisture conditions or is reserve forest land for which no inventories are available. Table 1 shows the areas of productive and non-productive forest land in each province and territory; forest land in each province classified by type of growth is given in Chapter X at p. 441.

## 1.—Productive and Non-productive Forest Land, by Province

Province or Territory	Productive Forest Land	Non-productive Forest Land	Total
	sq. miles	sq. miles	sq. miles
Newfoundland.....	33,862	53,930	87,792

<b>Canada.....</b>	<b>967,946</b>	<b>742,842</b>	<b>1,710,788</b>

With help from the Federal Government, inventories of the forest resources are made periodically by provincial forest authorities and, with their co-operation, the federal Department of Forestry and Rural Development compiles the national forest inventory (see p. 447). The latest estimates of the total stand of timber, by province and region, appear in Table 2. These estimates are subject to constant revision as more accurate and complete inventories are compiled.

## 2.—Estimate of Standing Timber, by Type and Size and by Province and Region

<sup>1</sup> Ten inches D.B.H. or over (suitable for saw timber).<sup>2</sup> Four to nine inches (units of 85 cu. ft.).

*Tenure of Forest Land.*—Corporations and private individuals own 9 p.c. of the productive forest land of Canada and 91 p.c. is in the possession of the Crown in the right of the federal or the provincial governments. Rights to cut Crown timber under lease or licence have been granted on 23 p.c. of the productive forest land; the remainder comprises unalienated productive forest areas and federal lands such as Indian reserves, military reserves, etc.

Woodlots on the 480,903 farms (1961) across the country comprise about 3 p.c. of the total productive forest. These small wooded tracts, ranging in size from three or four acres to 200 or more acres, are among the most accessible forests in Canada. Also, the woodlots of Eastern Canada are, in general, highly productive because they lie in the southern part of the country and frequently occupy soils that are considerably higher in quality than those typical of the northern forests.

### 3.—Tenure of Occupied Productive Forest Land, by Province

(Net area in sq. miles)

Province or Territory	Provincial Crown Land			Federal Crown Land	Privately Owned Land			Total Occupied Productive Forest Land

<sup>1</sup> Includes 16 sq. miles of "other" provincial Crown land. <sup>2</sup> Of this total, 320 sq. miles are under lease or licence—293 sq. miles in Alberta, the 25 sq. miles in the Yukon Territory, and the 2 sq. miles in the Northwest Territories.

**Canada's Forest Trees.\***—There are more than 150 tree species in Canada, of which 31 are conifers or 'softwoods'. About two thirds of these softwoods and one tenth of the large number of the deciduous or 'hardwood' species are of commercial value.

The spruces are the most important forest trees in Canada. Although red spruce is found only in Eastern Canada, and Sitka and Engelmann only in the far west, black spruce and white spruce are found from the Atlantic almost to the Pacific, and northward to Alaska. About one third of Canada's timber volume is spruce. The wood is used for pulpwood, lumber and plywood.

\* Prepared by John W. Ker, Professor of Forestry, University of New Brunswick; reproduced courtesy Timberjack Machines Limited. The dominant species existing in each forest region are given on pp. 508-510 and detailed information is contained in Department of Forestry and Rural Development Bulletin No. 61, *Native Trees of Canada*.

Second only to the spruces are the two-needled pines—jack pine, which grows from Nova Scotia to northern Alberta and the Northwest Territories, and lodgepole pine in western Alberta, British Columbia and Yukon Territory. These pines comprise 11 p.c. of Canada's standing timber volume.

Third in importance are the true firs, of which the most widely distributed is the balsam fir, found from the Atlantic seaboard west to north-central Alberta. In the far west are three species: grand fir, which grows on the southern coast of British Columbia and in the southern interior; amabilis fir, found at intermediate levels on the coast; and alpine fir, which grows in the mountains and interior of British Columbia, the foothills of Alberta and southern Yukon Territory. The wood is commonly cut as pulpwood and, to a lesser extent, as sawlogs.

Next in abundance is a family of eight broadleaved deciduous trees: the trembling aspen, largetooth aspen, balsam poplar and five cottonwoods—the eastern, black, lanceleaf, narrowleaf and plains cottonwood. The most widely distributed is the trembling aspen, followed by the balsam poplar. The black cottonwood reaches the largest size in this family. In demand for veneer stock, this species and its hybrids will yield large wood volumes per acre on short rotations under intensive management. The other species in this group are used in the manufacture of excelsior and soda pulp.

Fifth among Canada's forest trees is the hemlock. Three species are native to Canada: eastern hemlock grows in the Maritimes, southern Quebec and Ontario; western hemlock at lower and intermediate levels throughout the coastal and interior wet belts of British Columbia; and mountain hemlock at higher elevations in the southern mountains of British Columbia, growing down to sea level on wet, exposed sites on the northern coast and the panhandle of Alaska. Western hemlock is a valuable pulpwood species. Eastern hemlock is a main commercial source of tannin and the wood is used for railway ties, wood-stave pipe, lumber and pulp. Mountain hemlock is not important as a timber species.

The tree responsible more than any other for British Columbia's world-wide reputation for timber is the coastal form of the Douglas fir, which is dominant in the forests of the south coast and the southeastern half of Vancouver Island. An interior form, the blue Douglas fir, is widely distributed throughout the Rocky Mountain system. Douglas fir is used extensively for lumber, plywood, construction timbers, piling and kraft pulp.

Next in order are the cedars, including arborvitae and yellow cedar. The eastern white cedar is found from western Nova Scotia to Manitoba; its wood is light and resistant to decay. The western red is of prime importance to British Columbia. In virgin forests, it attains heights of 150 to 200 feet and diameters of 8 to 10 feet. It is used for lumber, hand-split shakes, shingles, poles and posts. At higher altitudes on the British Columbia coast, the red cedar is replaced by the yellow cedar. The wood of this species also resists decay and is prized for boat-building and interior finishing. It is useful for poles, piling and as battery separators.

Finally, there are the birches. Most abundant is the white birch which grows widely throughout Canada. Western white birch is a large tree, reaching heights of 100 feet and diameters of 3 to 4 feet. It is found in northern and western Alberta, in British Columbia and also on the Atlantic Coast in the east. However, the most important hardwood tree in Eastern Canada is the yellow birch, which grows in southern Newfoundland, the Maritimes, Quebec and Ontario. Its wood is much in demand for flooring, furniture, veneer and railroad ties.

Canada is indeed fortunate to possess such a diversity of useful tree species. The white pine and spruce in the east, and Douglas fir, western red cedar and western hemlock in British Columbia have won for Canada its enviable position as the world's leading nation in forest products trade.

## Section 2.—Forest Depletion

General information on forest depletion and increment as well as statistics on forest fires and fire losses are presented in this Section. The scientific control of the influences that account for wastage, such as forest fires, insect pests, etc., is dealt with in Section 4.

The latest information available on the rate and cause of depletion of reserves of merchantable timber is given in Table 4. Of the total depletion of the forests in the ten year period 1953-62, 86 p.c. was utilized and 14 p.c. was destroyed by fire. (Information on the extent of damage caused by agencies other than fire, such as insects, disease and natural mortality, is not available. Losses from insects and diseases alone are estimated to be in excess of 1,000,000 M cu. ft. of merchantable timber annually.) The average annual utilization of 3,232,353 M cu. ft. comprised 50 p.c. logs and bolts, 40 p.c. pulpwood, over 8 p.c. fuelwood and almost 2 p.c. other products. A little over 4 p.c. of the total utilization was exported in the form of logs and bolts and pulpwood.

The productive forests of Canada covering an area of 967,946 sq. miles constitute the reserve from which forest production will be obtained for many years to come. The supply of merchantable timber on this area is estimated at 751,883,000 M cu. ft. and the average annual utilization in 1953-62 of 3,232,353 M cu. ft. therefore represented less than one half of one per cent of the supply. However, it should be noted that utilization does not occur evenly throughout the productive forest area but is concentrated on the relatively small area of occupied forest land (land under lease, licence or private ownership). Thus, overcutting may occur on many of these occupied areas, emphasizing the need for orderly management of all commercial forests if the forest industries are to maintain their important position in the Canadian economy. Also, efficient utilization of cut timber is an important factor related to forest depletion.

### 4.—Forest Utilization and Depletion, Ten-Year Average 1953-62

Item	Usable Wood	Percentage of Total Depletion
	M cu. ft.	
<b>Products Utilized—</b>		
Logs and Bolts—		
Domestic use.....	1,608,424	42.8

<b>Totals, Utilization.....</b>	<b>3,232,353</b>	<b>86.0</b>
<b>Wastage—</b>		
By forest fires.....	526,220	14.0
<b>Totals, Depletion.....</b>	<b>3,758,573</b>	<b>100.0</b>

**Forest Fire Statistics.**—There were 6,944 forest fires in Canada during 1964, 10 p.c. fewer than in 1963. Although the area burned over was more than six times larger than that burned in the previous year, only a little over one fifth of it was classed as merchantable timber land; the amount of saw timber lost was actually lower than in 1963 and amounted to only 5.8 p.c. of the 1954-63 average. The amount of small material lost was more than four times higher than in 1963 and was also considerably higher than the ten-year average. In monetary terms, the estimated total damage was almost 53 p.c. higher than in 1963 but was less than half the ten-year average.

## 5.—Forest Fire Losses, 1963 and 1964, compared with Ten-Year Average 1954-63

<sup>2</sup> Included in provincial figures.

In 1964, lightning accounted for 29 p.c. of all forest fires and 80 p.c. of the total area burned. Thus, almost three quarters of the fires but only one fifth of the area burned were ascribed to human error. Recreationists were responsible for the greatest proportion of man-caused fires.

## Section 3.—Statistics of Forest and Allied Industries

This Section is concerned with the many industries engaged in the felling of timber and its transformation into a great variety of products required in modern living. The extensive forests of Canada provide raw materials for several large and growing primary industries, i.e., the sawmills and planing mills, the shingle mills, the veneer and plywood mills, the particle board plants and the pulp and paper mills, which in their turn provide raw materials for a wide range of secondary industries that convert the products of the primary industries into more highly manufactured goods such as sash, doors, mill work, wooden boxes, furniture, converted papers and paper goods, etc. However, much of the output of the primary forest industries is exported; the sawmill industry and the pulp and paper industry, especially, contribute substantially to the value of the export trade of Canada and thereby provide an important part of the foreign exchange necessary to pay for the imports from other countries.

Statistics of manufacturing activity and total activity of the wood industries and the paper and allied industries may be found in a number of tables in Chapter XVI on Manufactures. These statistics and those included in the tables of this Section are based on the revised standard industrial classification and the new establishment concept, explained in Chapter XVI.

## Subsection 1.—Woods Operations

The forests of Canada provide the raw materials for its sawmills and planing mills, shingle mills, veneer and plywood mills, particle board plants and pulp and paper mills as well as roundwood for export in unmanufactured state and other products such as fuelwood, poles and piling, fence posts, mining timber, Christmas trees, etc. Tables 8 and 9 give the estimated quantities of wood cut in Canada by province and by type of product.

<b>Totals.....</b>	<b>...</b>	<b>3,303,239</b>	<b>...</b>	<b>3,431,802</b>	<b>...</b>	<b>3,671,236</b>

<sup>1</sup> In estimating the annual cut, certain factors have been used to convert commercial units to cubic feet. The factor for logs and bolts for the British Columbia coastal region is 175 cu. ft. per M ft. b.m. logscale and for the remainder of Canada 200; the factor for rough pulpwood and round mining timber is 85, for fuelwood and wood for charcoal 80, fence posts 1.2 and fence rails 1.

## Subsection 2.—Wood Industries

The standard industrial classification subdivides the wood industries group into the following industries: sawmills and planing mills, shingle mills, veneer and plywood mills, sash, door and other millwork plants, hardwood flooring mills, wooden box factories, the coffin and casket industry and miscellaneous wood industries. The latter item is further subdivided into the wood preservation industry, the wood handles and turning industry, the woodenware industry, the cooperage industry and miscellaneous wood industries, *n.e.s.*

The sawmills and planing mills, the shingle mills, the veneer and plywood mills and the particle board plants (the latter are included in the miscellaneous wood industries, *n.e.s.* group) mainly use roundwood as a raw material and sometimes are called primary wood industries and are dealt with separately below. The other industries, which constitute the secondary wood industries, further manufacture part of the production of the primary wood industries into a great variety of products. However, most of the production of the primary wood industries is not further processed.

**Sawmill and Planing Mill Industry.**—Lumber is by far the most important single product of this industry and, as shown in Table 10, British Columbia is the most important province in this field. It should also be noted that the shipment figures of Tables 10 and 11 contain a certain element of duplication because sales of lumber from one sawmill to another will be reported as shipments by both establishments. Similar situations occur in most industries to a greater or lesser extent.

In addition to the lumber produced by the sawmill and planing mill industry, a small amount is produced by establishments classified to other industries, bringing total lumber production in Canada in 1964 to 10,363,564 M ft.b.m.

### 10.—Lumber Production and Shipments and Value of All Shipments of the Sawmill and Planing Mill Industry, by Province, 1964

			<b>Totals.....</b>	<b>10,424,525</b>	<b>730,870</b>

**Shingle Mill Industry.**—Most of the shingles and shakes produced in Canada are from British Columbia mills. All establishments classified to this industry reported, for the year 1964, shipments of 1,913,934 squares of shingles and shakes valued at \$24,462,000, of which British Columbia accounted for 1,894,216 squares valued at \$24,301,000. However, it should be mentioned that considerable quantities are produced by establishments classified to other industries and by individuals intermittently operating one or two shingle machines or producing by hand; although no adequate measure of this production is available, it is known to contribute significantly to the total. Of the total production in 1964, 2,558,511 squares were exported, 2,503,290 squares going to the United States.

**Veneer and Plywood Industry.**—The production of hardwood veneer and plywood in Canada is confined largely to the eastern provinces and the production of softwood veneer and plywood almost entirely to British Columbia. For the latter, Douglas fir is most commonly utilized because of the availability of large diameter logs of this species from which large sheets of clear veneer can be obtained. Of the hardwoods, yellow birch is by far the most important species. Although most of the raw materials for this industry are of Canadian origin, some decorative woods are imported, particularly walnut.

About 30 p.c. of the shipments of veneer, shown in Table 12, are softwood veneers; most of these are further manufactured into plywood by Canadian mills, thus contributing to the shipments of plywood shown in the same table. Some of the hardwood veneers are also shipped to other veneer and plywood mills for further manufacture or to other industries such as the furniture industry for veneering purposes, but a significant portion is exported. Total exports in 1964 amounted to 830,917 M sq. ft. valued at \$28,811,000, of which 781,650 M sq. ft. valued at \$26,290,000 went to the United States.

Most of the plywood is consumed in Canada, although exports are not unimportant; in 1964 these amounted to 48,362 M sq. ft. of hardwood plywood valued at \$8,465,000 and 455,421 M sq. ft. of softwood plywood valued at \$29,385,000. The greater part of the exports of hardwood plywood went to the United States (45,251 M sq.ft. valued at \$7,554,000) but most of the softwood plywood exports went to Britain (406,770 M sq.ft. valued at \$26,338,000).

### 12.—Veneer and Plywood Shipments, by Type, 1962-64

Type	1962		1963		1964

<sup>3</sup>  $\frac{3}{8}$ " sanded basis.

### Subsection 3.—Paper and Allied Industries

The standard industrial classification subdivides the paper and allied industries group into the following industries: the pulp and paper industry, the asphalt roofing manufacturers, the paper box and bag manufacturers, and other paper converters. Statistics of manufacturing activity and total activity of the paper and allied industries group are given in Chapter XVI on Manufactures.

**Pulp and Paper Industry.**—This industry is by far the most important of the group. In fact, it has been for many years the leading industry in Canada, contributing over 4 p.c. of the total gross national product and almost 17 p.c. (1964) of the total value of the country's exports. Of the 131 pulp and paper mills in operation in 1964, 31 were making pulp only, 25 were making paper only and 75 were combined pulp and paper mills.

These mills consume enormous quantities of roundwood, 16,147,000 rough cords with a cost value of \$402,270,000 being so used in 1964. In that year, 114,000 cords of pulpwood were imported and 1,235,000 cords were exported. In addition, the pulp and paper mills use wood residues of the sawmill and other industries for pulping, such as cores of peeler logs, slabs and edgings or wood chips made thereof, shavings, etc., and recently even sawdust has been used successfully for this purpose. The total of such wood residues used by the industry in 1964 amounted to the equivalent of 3,500,000 rough cords of pulpwood, valued at \$68,710,000. The industry also consumes large amounts of electric power, chemicals and other goods and services and requires great quantities of clean water.

Some of the production of the pulp and paper industry is consumed in Canada or serves as a raw material for the paper-using or secondary paper and allied industries and certain other industries, but a great part of it is exported, particularly newsprint and various

types of pulp (see Table 15), most of it to the United States. Some plants included in the pulp and paper industry classification also convert basic paper and paperboard into more highly manufactured papers, paper goods and boards but their output represents only a small part of Canada's total production of converted papers and boards. Tables 13 and 14 give shipment and production figures for pulp and shipment figures for basic paper and paperboards for 1960-64, Table 15 shows exports of pulp and of newsprint to Britain, United States and all countries for 1960-65, and Tables 16 and 17 give world pulp and newsprint statistics for 1963 and 1964.

### 13.—Pulp Shipments and Production, 1960-64

<sup>1</sup> Figures differ slightly from DBS figures given in Tables 14 and 15 because of different bases of calculation.

**Asphalt Roofing Manufacturers.**—These establishments produce composition roofing and sheathing, consisting of paper felt saturated with asphalt or tar and, in some cases, coated with a mineral surfacing. They also produce asphalt, vinyl-asbestos and pure vinyl floor tiles. Their total shipments in 1964 were valued at \$55,579,000.

**Paper Box and Bag Manufacturers.**—This industry includes manufacturers of folding cartons and set-up boxes, manufacturers of corrugated boxes and manufacturers of paper bags. Their total shipments in 1964 amounted, respectively, to \$136,801,000, \$179,183,000 and \$115,256,000.

**Other Paper Converters.**—This group produces a host of paper products such as envelopes, waxed paper, clay coated and enameled paper and board, aluminum foil laminated with paper or board, paper cups and food trays, facial tissues, sanitary napkins, paper towelling and napkins, toilet tissue, etc. The total value of manufacturing shipments of this industry in 1964 amounted to \$236,412,000.

## Section 4.—Forest Administration, Research and Conservation

### Subsection 1.—Federal Forestry Program

**Administration.**—The Federal Government is responsible through several departments and agencies for the protection and administration of the forest resources of the Yukon and Northwest Territories and of other federal lands such as the National Parks, Indian reserves, military areas and forest experiment stations.

The main forestry functions of the Department of Forestry and Rural Development\* (established as the Department of Forestry in 1960 and re-named in 1966) include: (1) provision for the conduct of research relating to the protection, management and utilization of the forest resources of Canada and the better utilization of forest products; (2) undertaking, promoting or recommending measures for the encouragement of public co-operation in the protection and wise use of the forest resources of Canada; (3) co-operating with provincial governments and others by means of agreements relating to forestry matters; (4) provision of forest surveys and advice relating to the protection and management of federally administered forest lands; and (5) assuming responsibility for forest protection and management on federal lands at the request of the department or agency concerned. The Act provides for the establishment of research facilities and of forest experimental areas on federal lands.

The Department maintains an Advisory Group to the Deputy Minister, whose main responsibilities are to develop policies and long-range plans for forest research, forest products research, forest economics and other such matters as federal-provincial relations and liaison with the forest industries and the academic community. A Directorate of Program Co-ordination provides national co-ordination of forestry research programs and supervises national research services at Ottawa. Research institutes and laboratories conduct fundamental research within prescribed fields, supporting and complementing the research programs carried out in seven administrative regions—Newfoundland, the Maritimes, Quebec, Ontario, Manitoba-Saskatchewan, Alberta-Yukon Territory-Northwest Territories, and British Columbia. Forest surveys are conducted on federal lands throughout the country and advice and assistance on forest management are given to the administering agencies. The Department also provides for the management of forests, including timber disposal, in certain areas on behalf of other government departments. Co-operation is extended to the External Aid Office in administering technical assistance programs involving forest surveys in other countries. The Department's public information program includes the issuing of publications designed to increase public awareness of

\* The Department of Forestry and Rural Development includes, under the administration of a separate Assistant Deputy Minister, a division responsible for rural development under authority of the Agricultural and Rural Development Act (ARDA) and the Maritime Marshland Rehabilitation Act, described at pp. 445-447; the administration of the Feed Grain Assistance Regulations, described at p. 462, is also a responsibility of the Department.

the importance of Canada's forest resources and the need for conserving them; the distribution of research publications and the interpretation of the scientific work of the Department to industry and to the general public; the dissemination of departmental and forestry information to the press, radio and television; the production of exhibits, displays and posters; and the maintenance of a photographic library dealing with forestry subjects.

The research functions of the Department and the Federal-Provincial Forestry Agreements program are described in the following paragraphs.

**Research on Silviculture, Tree Biology, Forest Soils and Fire.**—The objects of such research are (1) to provide basic information on the characteristic occurrence, growth, development and behaviour of forest tree species throughout the wide range of forest types and environmental conditions of Canada and (2) to develop and test new or improved methods for use in forest management and forest fire control. The programs are conducted throughout Canada, often in co-operation with other federal departments, provincial forest authorities, other research agencies, universities and industry.

Many of the silvicultural studies involve assessing the factors responsible for the success or failure of natural regeneration following various cutting methods and treatment of seedbeds, comparing different methods of seeding and planting, and determining the effects of different methods of intermediate cutting on the development of residual trees and stands. Studies are made of successional changes in most of the important forest types. Application of silvicultural techniques as well as research in regulation of cut and in methods of protection is aimed at determining how forests may be maintained at the highest levels of production. The relationships between forest growth and site are being studied with a view to the assessment of long-term productivity. The requirements of light, temperature and moisture that will produce optimum conditions for growth and development are being determined for seedlings. The physiological processes of growth and reproduction are under investigation for a limited number of species. In tree breeding, superior strains are selected or developed and there is a continual improvement in propagation and breeding techniques. Research in forest land encompasses forest geography and land classification. Research in soils is directed toward determining the relation of tree growth and nutrition to chemical and physical properties of the soil.

Techniques used to measure the volume, distribution and growth of the forest resource are constantly under review and study; new methods are tested and developed. Research in forest inventory methods is of increasing importance because of the continuing programs of forest inventories being conducted in most provinces and in the northern territories. Data from air photographs are correlated with field observations to develop new techniques for estimating timber. Research is continuing in methods for measuring tree images to determine heights, crown widths, canopy density and other data from photographs taken in different seasons under various conditions. The use of large-scale photography of sample areas is also being investigated and studies are being made in the identification of species and sub-types. Data on the growth and development of typical forest conditions are being collected on many thousands of semi-permanent sample plots.

Adequate protection of forests against fire is of vital importance in Canada. The Department works in full co-operation with provincial forest services in almost all phases of forest fire control and has made major contributions in the fields of forest fire danger measurement and forecasting and in fire control planning. Investigations are being made of forest fire behaviour, of the use of prescribed fire for hazard reduction and seedbed preparation, of better methods of reporting forest fires, and of fire damage appraisal and related factors in forest protection standards. Studies are being continued in the use of chemicals for fire suppression and pre-suppression, of fire fighting equipment and techniques, and of the use of aircraft in forest fire control. Another important field of endeavour is the study of fire hazard created by slash from various kinds of logging practices in different species.

**Forest Products Research.**—This work is directed toward obtaining background data on the properties of Canadian woods, developing new and better uses for wood

products, improving manufacturing processes, and effecting more complete utilization of wood substances. Activities cover all major aspects of forest products and include the determination of the physical, mechanical, chemical and anatomical properties of wood and their relation to adaptability in use; studies of factors affecting quality of wood and of manufactured wood products; determination of factors that cause wood waste in logging and manufacturing; investigation into fire retardant treatments, the preservative treatment and painting of wood and the use of wood for the manufacture of a variety of products by chemical or mechanical means; and studies to determine possible new economic and more valuable uses for woods and to determine methods for the economical utilization of all wood substances available from the annual timber harvest.

The program is conducted mainly at two laboratories—at Ottawa and Vancouver—with units consisting of timber engineering, containers, glues and gluing, veneer and plywood, timber physics, wood chemistry, pulping, wood preservation, paints and coatings, wood pathology, products entomology, wood anatomy, logging, lumber manufacture and lumber seasoning. Research results are made available to the thousands of plants comprising Canada's timber-manufacturing and wood-using industries. Liaison is maintained with these industries to ensure that the research being conducted is of optimum national benefit. There is also constant co-operation with various government units in the performance of many investigations concerned with the use of wood. Research into the use of wood in housing construction and as an engineered material continues in co-operation with the National Research Council and the Central Mortgage and Housing Corporation.

At regional establishments, products research is planned on utilization problems of regional interest, and products liaison officers visit sawmills and other wood-working plants to keep industry aware of research developments and technical advances and, on the other hand, to keep the department informed of field problems on which research would be of value.

Departmental personnel serve on many national and international technical committees concerned with forestry problems and continuous collaboration is maintained with forest products laboratories in other countries for the dual purpose of exchanging information and avoiding duplication of research.

**Forest Insects and Diseases.**—Research on forest insects and diseases is conducted at regional laboratories and field stations in all principal forest regions of Canada. A Canada-wide survey is undertaken in co-operation with the provincial forest services and forest industries to maintain an annual census of forest insect and disease conditions and to detect and predict the occurrence of outbreaks. Survey results are made available to owners and operators of forest lands for use in planning salvage programs and directing control measures to reduce damage.

Laboratory research programs are designed to lead to comprehensive understanding of the biology and ecology of the more destructive forest insects and fungi, and the causes of fluctuations in abundance or severity of damage in time and place. Problems under intensive study include insect defoliators, leaf diseases, sucking insects, dwarf mistletoes, stem cankers, bark- and wood-boring beetles, trunk and root decays, tip- and root-boring insects and diseases of tree seedlings in forest nurseries. Research on development, physiology, nutrition and taxonomy complements the field ecological studies of insects and fungi. Problems of national importance in insect pathology, cytology and genetics, bioclimatology and chemical control are investigated.

Experiments are also carried out in insect and disease control, utilizing cultural techniques, chemicals and biological control agents including parasites, predators and insect pathogens. Technical advisory services are provided in evaluating quarantine programs, possibilities of eradication or control, or other applications of research results. Examples include recommendations for reduction of seedling losses in forest tree nurseries through cultural techniques and chemical applications; the co-operative organization of cull surveys to improve forest inventories; consultation and advisory services for local

authorities on the Dutch elm disease problem; and technical co-operation with provincial governments and industrial agencies in the organization of spraying operations against the spruce budworm in New Brunswick, the jack pine sawfly in Quebec, and the hemlock needle miner and ambrosia beetle in British Columbia.

**Federal-Provincial Forestry Agreements.**—The passing of the Canada Forestry Act in 1949 was an event of great significance to federal-provincial relations in the field of forestry, as authority was given to the then Minister of Mines and Resources to "enter into agreements with any province for the protection, development or utilization of forest resources". Subsequently, this Act was replaced by the Department of Forestry Act, 1960 (re-named the Department of Forestry and Rural Development Act in 1966). Since the beginning, agreements have been entered into with most provinces; these now provide for federal financial support for programs of forest inventories and reforestation, for the purchase of capital assets to be used in forest fire protection and for forest access and stand improvement projects.

Under the Act, a composite forestry agreement was entered into with the provinces for a term of two years ending Mar. 31, 1967. This agreement includes in "a single package" the federal aid available for the above-mentioned purposes and also gives the provinces considerably greater freedom to allocate funds among the specified fields of work. A total of \$7,910,000 of federal funds is available annually, the allocation to the provinces being in proportion to their productive forest areas.

Federal assistance is based on payment of 50 p.c. of provincial costs but reforestation is the one exception; the Federal Government pays \$15 per thousand trees planted, \$4 per acre seeded with ground preparation, \$2 per acre seeded without ground preparation, and \$2 per acre for seedbed preparation to promote natural regeneration and, in addition, contributes 25 p.c. of the cost of establishing or expanding forest nurseries. Costs of management-type surveys are included in the agreement as sharable, and the reforestation of occupied or unoccupied Crown land qualifies for assistance provided it is carried out by the province.

Since 1951, more than \$56,000,000 in federal funds has been contributed to the provinces under the main forestry agreements, plus \$6,253,000 for aerial spraying in New Brunswick against budworm infestations and, on a smaller scale, in British Columbia and Quebec against the budworm and jack pine sawfly, respectively, and \$663,000 under a special forest improvement agreement with Nova Scotia, designed to provide woods experience for coal miners laid off in the Cape Breton area.

Work accomplished with federal assistance has included the completion of forest inventories by seven provinces. Most of the provinces have instituted programs concerned with management-type inventories and at the same time are maintaining their initial inventories in a reliable state. As a result of these inventories, new woods operations have sprung up, particularly in the British Columbia interior, and new pulp and paper mills have been built or are planned in other areas of Canada. The Federal Government has contributed under the agreements to the establishment of 16 new forest nurseries and five seed extraction plants and to the planting of 307,215,000 trees. Federal contributions of \$16,166,000 have been used for the purchase of fire towers, radios, motor vehicles, bulldozers, muskeg tractors, power pumps, hand pumps, hose, aircraft, and the construction of buildings required for the prevention, detection and suppression of forest fires and for the charter of aircraft for patrol, transportation and water-dropping purposes. Several hundred access projects designed to improve protection and permit the management of undeveloped forest areas have been undertaken, resulting in the construction of nearly 4,000 miles of road and 38 airstrips, with the Federal Government contributing more than \$21,301,000.

### Subsection 2.—Provincial Forestry Programs

All forest land in provincial territory, with the exception of the minor portions in National Parks, federal forest experiment stations, military areas and Indian reserves, is administered by the respective provincial governments. The forestry program of each province is outlined below.

**Newfoundland.**—Geographically, the Province of Newfoundland has two separate regions—the Island and Labrador on the mainland. The productive forest land of the Island is estimated at 12,984 sq. miles and of Labrador at 20,878 sq. miles, a total of 33,862 sq. miles. Most of Labrador's forests are leased but are as yet virtually untouched. Only 578 sq. miles are classified as farm woodlots.

A large part of the forest land in the interior of the Island is leased, licensed or owned by paper companies, but a three-mile-wide belt along most of the coastline is retained as unoccupied Crown land for the purpose of providing firewood, construction material, fencing material, etc., for the local populations. Within this coastal forest belt, every household has legal right to cut 2,000 cu. ft. of wood a year for domestic use. This form of cutting is generally without intense control or restriction but a policy is being introduced whereby cutting in certain 'management areas' is controlled by forest officers. Approximately one half of the Crown forests are at present under management. Commercial timber-cutting on unoccupied Crown lands has been by permit since 1952; permits for amounts up to 120 cords per person are issued by the field staff but permits for larger quantities must be approved by the government. This type of permit is generally preceded by advertising of standing timber for sale by tender, the timber involved usually being over-mature or damaged by fire, insects or storms.

The Island is divided into three forest regions, each of which is subdivided into five districts. Each region is under the control of a regional forester and each district is headed by a district ranger with a staff of rangers and assistant rangers. Twenty-eight well-equipped forest fire depots and 21 lookout towers, connected by radio-telephone, are operated by the Newfoundland Forest Service; others are operated by the Newfoundland Forest Protection Association, the two paper companies and the Canadian National Railways. The Forest Service operates eight aircraft for fire detection and water bombing, and two helicopters for transporting men and equipment.

Forestry operations in Labrador are under the supervision of a regional ranger located at Happy Valley (Goose Airport). The permanent staff of about 90 persons is augmented by a like number of seasonal employees during the fire season. Forest fire protection bases are located near Goose Airport and at the Carol Lake mining development area. The two paper companies maintain their own fire protection organizations.

**Prince Edward Island.**—Almost all of Prince Edward Island's woodland is privately owned, so that the Forestry Division of the Department of Agriculture is concerned mainly with planting, woodlot management and fire protection. A small nursery, established jointly with the Federal Government, deals with the Island's needs by providing planting stock for the reforestation of waste lands, the cost of which is shared by the Federal Government, and fulfilling the requirements of private individuals at a reasonable cost.

In proportion to its size, Prince Edward Island exports a great deal of pulpwood. This export, combined with the fuelwood and lumber cut each year, led to the inauguration of a program designed to educate the owner in the proper care and management of his woodlot.

Fire protection does not usually constitute too great a problem. Wooded areas are scattered in patches throughout the province and, since a network of roads makes all woodlots accessible, equipment can be brought to the scene of a fire quickly and easily. Research is limited mainly to reforestation and woodlot management problems.

**Nova Scotia.**—The land area of Nova Scotia is 20,402 sq. miles. Of this area, 16,274 sq. miles are classed as forested and 93 p.c. of the latter is regarded as productive. Although 91 p.c. of the forest land in Canada is held by the Crown in the right of the federal and provincial governments, only 22 p.c. is so held in Nova Scotia.

The provincial Crown lands are administered by the Department of Lands and Forests through a staff of foresters and rangers. Similarly, trained personnel are employed with some of the forest industries in the administration of privately owned forest lands. The Department administers the Lands and Forests Act as it pertains to all lands and is responsible for forest fire suppression. Forest fire detection is facilitated through 32 observation towers and an aerial patrol service, all integrated with land vehicles and headquarters by radio and telephone communication systems. Fire suppression crews and rangers with equipment are stationed throughout the province.

The forest industry is of prime importance to the economy of Nova Scotia. There are in operation about 500 sawmills of various types and sizes, one newsprint mill, two ground-wood pulp mills and a chemical pulp mill; construction of a second chemical pulp mill and a hardboard plant is under way. These mills, along with the export pulpwood trade and pitprop production, produced about 250,000 M ft. b.m. of sawn materials and about 650,000 cords of round products in 1965. Twenty-eight sawmills were equipped for the production of pulp chips from sawmill residue and the equivalent of about 85,000 cords of chips was produced from slabs and edgings.

The reforestation program, which has been active for many years, is being expanded with respect to non-forested land and experimental work on land preparation on fire barrens is being conducted. In 1965 approximately 1,000,000 trees were removed from the six forest nurseries for planting in the field, mostly on non-forested land.

Forest management programs include the construction of access roads into Crown land timber areas and stand improvement under federal-provincial agreements. Timber, pulpwood and Christmas trees are sold through public tender and cutting on Crown land is done under recommendation of district foresters of the Department of Lands and Forests. Management cruises, regeneration studies and experimental cuttings are conducted on Crown lands and an active program of operating these lands under sustained-yield management plans is well under way. Silvicultural techniques are being expanded to operational levels on Crown lands.

Forest research is carried on by Federal Government agencies and the Nova Scotia Research Foundation. Investigations involve stand improvement, cutting methods, and insect and disease activities. Extension projects include fire prevention, a film program for schools, distribution of information on forest and wildlife conservation, promotion of the Christmas tree industry, woodlot improvement, preparation of material for the mass media, and technical assistance to sawmill operators.

**New Brunswick.**—Of the total land area of New Brunswick (27,835 sq. miles), approximately 86 p.c. is classed as productive forest, of which the Crown, in right of the province, owns about one half. About 2 p.c. is owned by the Federal Government and the remainder is privately owned. The report of a provincial forest inventory, part of the national forest inventory, was published in 1958. The total volume of wood in merchantable sizes is estimated at 16,900,000 M cu. ft.; coniferous species make up 71 p.c. and deciduous species the remainder.

Protection from forest fires, the first requirement for forest conservation, is mainly the responsibility of the Department of Lands and Mines which also carries out duties in connection with game management and protection, provincial parks, and the administration of provincial Crown lands. A large-scale aerial spraying program to protect balsam fir and spruce from the spruce budworm has been carried on since 1952 by a Crown company sponsored by the federal and provincial governments and by representatives of the forest products industries. Forest Management Licences issued by the province

authorize operators to cut and remove forest products in accordance with forest management plans and cutting permits. Royalty is paid to the province when products are cut by the licensees.

New Brunswick does not maintain a forest research organization but co-operates with the federal Department of Forestry and Rural Development in that field. The University of New Brunswick has also undertaken a small number of forest research projects in co-operation with the National Research Council, the provincial government and other interested organizations.

In the field of education, the University of New Brunswick offers undergraduate and graduate courses in forestry leading to B. Sc.F. and M. Sc.F. degrees. It is also responsible for the administration of the Maritime Forest Ranger School in conjunction with the Governments of New Brunswick and Nova Scotia and with private industry. The forest extension services of the University assist both government and private agencies in the direction and planning of various forestry extension programs. The provincial Department of Agriculture also provides an expanding extension service to the owners of farm woodlots.

**Quebec.**—The forest lands of the Province of Quebec cover an area of 270,418 sq. miles extending from its southern borders to latitude 52° N, between the frontier of Labrador in the east and the Eastmain River Basin in the west. Of this total, 85,451 sq. miles are classed as occupied productive forest land, where tree-felling is done under lease and permit. The area owned privately covers 25,114 sq. miles and federal Crown forests, 225 sq. miles. Approximately 117,481 sq. miles of the productive forest lands of Quebec are unoccupied. About one third of the annual cut comes from privately owned lands.

The Woods and Forests Division of the Department of Lands and Forests administers the public forests of Quebec, including management and inspection, protection against pests and fire, the latter service extending to certain private forests, the taking of inventories, the issuing of operations permits and mill permits, the measuring of all timber cut, the control of shipments of timber outside Quebec, the collecting of stumpage dues, etc., the reclaiming of territories suited to forestry operations, the operation of nurseries and of student forestry camps, the supplying of technical assistance and information to forest owners, and rural forestry management.

The forests reserved for industry are leased as 'forest concessions' and a cutting licence is renewed annually as long as the concessionnaire has complied with conditions imposed. The licence specifies the amount of timber of each variety to be cut, where it is to be cut, tree diameters, etc. The Division supervises all cutting and requires full reports concerning planned operations. All wood cut on Crown lands must be measured by licensed cullers and be in accordance with official regulations. The measuring, in addition to establishing the amount of wood cut, is used as a basis for the reckoning of wages of forestry workers under contract and for the calculation of stumpage dues, which are sent monthly to the recipient and payable one month after receipt. Unleased forest land may be worked directly by the Division, or worked under contract or special agreement with private companies.

Quebec's forest protective system comprises three organizations—the Protective Service of the Department, the protective associations and the non-affiliated lease holders or owners. The Protective Service, in addition to its direct protection functions, enforces the legislation and regulations governing forest fire protection over the whole province. The protective associations, of which there are six, are syndicates of lease holders and of owners who have formed an association to satisfy the law which compels them to protect their limits or private forests of 2,000 acres or over. Members assume half the costs of fire fighting incurred by the associations. The third group is composed of lease holders or owners who prefer to discharge their obligations personally as far as forest protection is concerned. They are subject to the same obligations and privileges as the associations. Certain rural municipalities also take some responsibility for forest protection in their areas in co-operation with the Protective Service.

In its efforts to perpetuate the forest resources of the province on a sustained-yield basis, and to rehabilitate the areas that cannot reconstitute themselves, the Division has established 24 nurseries, the first of them at Berthierville in 1908. Some of them are large permanent establishments covering all phases of production and others are secondary or movable nurseries working with partly grown seedlings. The present stock of all nurseries is in the neighbourhood of 70,000,000 plants. Plants for the re-stocking of private properties are supplied free on request.

**Ontario.**—The boundaries of Ontario enclose an area of 412,582 sq. miles—83 p.c. land and 17 p.c. water. Forest lands comprise 75 p.c. of total land, of which 105,262,000 acres are classified as productive. The Crown owns 90 p.c. of the productive forest land.

Although 84 tree species (exclusive of the hawthorns) occur within Ontario, four species (black spruce 29 p.c., poplar 19 p.c., jack pine 13 p.c. and white birch 11 p.c.) account for almost three quarters of the total volume of standing trees. The total gross volume has been estimated at 151,000,000 M cu. ft.—61 p.c. softwoods and 39 p.c. hardwoods.

Crown forests are administered and managed through the Department of Lands and Forests, which has 10 branches at Head Office and 22 forest districts (grouped within seven regions). The Branches may be classified as service (Accounts, Law, Operations, Personnel, and Research) and operating (Fish and Wildlife, Forest Protection, Lands and Surveys, Parks, and Timber). The list of operating Branches indicates that a multi-use concept of forests is practised but only the programs that foster the growth and use of timber as a crop are discussed here.

**Management.**—The original function of the Timber Branch was to arrange for the orderly sale of timber and this important function is still carried out along traditional lines—operators are granted a licence to cut specified timber for which they pay stumpage at contractual rates on the measurement (scale) of products removed. However, the details and techniques of utilization are undergoing constant improvement. Although Ontario's forest-based industries have long been a Canadian leader in terms of diversity of products and value of shipments, there is still a surplus of allowable timber cutting over actual cutting in the province. To ensure the continuing supply of timber of the type required by industry, an effective management policy has been conceived. Continuing forest inventories, using aerial photographic methods in which the province pioneered, provide an up-to-date record of the forest wealth, showing the species and other characteristics of stands and their geographical distribution. Inventory data are then applied to management planning; the province has been divided into 216 management units, each homogeneous with respect to forest and use patterns. Long-term plans set out regulations on the volume and location of cuttings and include programs for regeneration and tending that will sustain yields. As of 1965, 162 plans (77 Crown, 66 company, and 19 agreement forest) were completed for approximately 170,000 sq. miles.

The Timber Branch is also responsible for the maintenance and improvement of forest production on Crown lands. It operates 10 forest tree nurseries (with their supporting tree seed collection, treatment, and storage plant), currently geared for an annual output of 60,000,000 units. In addition to plantings by Departmental staff, regeneration agreements have been signed with all major licensees under the terms of which they assume responsibility for the conduct of projects, receiving payment at an agreed rate for work completed. Other annual silvicultural measures include the direct seeding of over 5,000 acres, the scarification of 23,000 additional acres for natural seeding, and stand improvement treatment (cleaning, thinning, pruning, etc.) on 43,000 acres.

Over the past few years, the Research Branch has been developing a "tubeling" approach to planting, as a conventional planting substitute possessing greater flexibility both in nursery production and in length of planting period per year, so that unforeseen conditions, such as large burns, can be stocked promptly. Briefly, the procedure is to place 200 open-end, split plastic tubes (about  $\frac{1}{2}$ "  $\times$  3") in a tray, add soil, seed and covering material, and germinate in portable plastic-covered greenhouses. The tubes and

seedlings can be inserted intact into the ground at a rate of about 250 per man-hour. Limited testing has proved that this method is practicable and, during the summer months of 1966, a large-scale project (27,000,000) was conducted across the province.

For half a century, Ontario has had enabling legislation that permits municipalities to place abandoned and submarginal agricultural lands, to which they have acquired title, under agreement with the Department of Lands and Forests, which undertakes to plan and manage the properties for a specified period of time—usually 50 years. Nearly 200,000 acres currently under such agreements have been managed intensively, the plantations receiving regular thinnings. The trees removed are in demand for pulpwood, posts, poles and sawlogs, making the undertakings financially attractive. In addition, the properties that are close to centres of population are acquiring tremendous value as recreational areas.

Owners of private land may purchase planting stock for forestry purposes from government nurseries at nominal prices and may also receive free professional advice on any forestry matter, including silviculture, harvesting and marketing. Under new legislation (the Woodlands Improvement Act, 1966) the service to owners is greatly expanded and it is now possible to have planting and improvement work carried out completely under government direction and mainly at its expense. In return, the owner is required to meet a few modest demands that ensure his good faith.
